Blank.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are blank, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 22nd September 1885.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS
TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 18TH
OF SEPTEMBER 1885.**

At the close of the last week the barometric depression which had existed for some time previously in North Bengal had disappeared and a dry westerly wind current had set in over a large part of the province, and rainfall had become light and local. The weather conditions at this period showed every indication that a well defined break in the rains had set in over the greater part of the province, and for the first two days of the present week these conditions remained practically unaltered. On the 14th, however, the wind directions, which had previously become somewhat irregular, showed at the coast stations in the north-west angle of the Bay decided indraught towards the sea area, and these conditions developed on the following day into a distinct, but very feeble, cyclonic storm at the head of the Bay, the centre being probably only a short distance to the south-east of Saugor Island. Around the small depression winds circulated cyclonically as usual, but wind velocities were very light. On the morning of the 16th the storm had moved in a north-westerly direction, and its centre was between Calcutta and Burdwan, and on the 17th it had passed away in a westerly direction and was apparently in Chutia Nagpur, though it had become extremely feeble and could scarcely be detected. During the whole period of its existence the wind circulation accompanying it was feeble, but with its inland advance rather stronger monsoon winds set in over the eastern and southern districts of the Province, bringing no light though fairly general rainfall. In other respects the meteorology of the week has not been of much importance, and winds have been over a large part of the Province light and irregular in direction, except of course in those districts affected by the small depression. The districts which have therefore received the largest amount of rain during the week have been East, North and South-West Bengal and Orissa, while Behar and Chutia Nagpur have received comparatively small amounts of rain.

Pressure—Was during the previous week very slightly in defect of the normal, but during the present week there has been a very rapid change, and it averages now about 0·08" in excess of the normal. On the first day of the present week pressure rose rapidly in all districts, and it became nearly 0·1" in excess of the normal while in the western districts the excess was 0·12". This was succeeded on the 13th by a slight fall, but only to be followed by an increase on the 14th, and on this day at Durbhunga the excess pressure was no less than 0·15". A further general increase took place on the 15th, but the changes were to a great extent governed by the formation of the low pressure area at the head of the bay. On the 16th and 17th pressure fell rapidly with the advance of the depression, and it became nearly normal, while on the 18th pressure again rose at all stations, and the distribution became a little anomalous, as pressure was comparatively low in South Bengal and high at the northern stations, and on this day, while Saugor Island only showed an excess pressure of 0·03," at Durbhunga it was 0·11." For the whole week, then, the pressure, as above stated, has averaged about 0·08" in excess of the normal, and the excess pressure has been fairly equally distributed.

The variations of temperature also have been rather large during the week, and while during the first three days temperature generally increased rather rapidly, during the last four days of the week there was an almost equally rapid decrease in the southern, central and eastern districts. The average temperature for the whole week is very closely normal for the whole Province; but while Chutia Nagpur, South Behar, and Orissa show a slight excess temperature, North Behar and East and South-West Bengal show a decided defect. The largest variations from the normal in any of the districts are an excess of 1·9° in South Behar and a defect of 1·8° in East Bengal. The largest variations at individual stations have been an average excess of 3·3° at Gya and an average defect of 2·5° at Berhampore.

Rain, as has before been stated, was fairly plentiful during the last four or five days of the week in East and South-West Bengal and in Orissa. In North Bengal, on the other hand, rather heavy rain fell on the first and second days of the week. East Bengal shows the largest excess rainfall and reports 4·30 inches against the normal fall of 2·11 inches, and has therefore received an excess fall of 104 per cent. South-West Bengal has received 2·07 inches against the normal 1·67 inches, and has thus received an excess fall of 24 per cent. North Bengal has received 2·62 inches, but as the normal fall for the week is 2·88 inches, the rainfall has been in defect by 9 per cent. Orissa reports 2·00 inches against the normal 3·02 inches, and has thus received only 66 per cent. of the normal fall. North Behar reports 1·06 inches against 2·03 inches, and has thus received only 51 per cent. of the normal. Chutia Nagpur has averaged 0·74 inch, the normal fall being 1·92 inches; the defect is therefore 62 per cent.; and finally South Behar has only received 0·76 inch, while the normal is 1·44 inches and the defect in this district is 47 per cent.

Some of the rainfalls for smaller districts than the above Meteorological Divisions have shown even larger variations than are represented by the above percentages. Thus the south-west Midnapur and south 24-Pergunnas District has received 4·78 inches of rain against the normal 2·11 inches. The Nuddea District has received 2·57 inches of rain against the normal 1·55 inches. In East Bengal the following districts have received comparatively very large falls, the Dacca, Noakhally, Tipperah and Burrisal Districts; on the other hand, there have been some districts in which the rainfall has been very scanty for the week, and

these are principally in Behar, where the Mozufferpur, Gya and Patna districts have only received an average of two or three tenths of an inch of rain for the entire week.

There have also been some heavy rainfalls on isolated days at various stations: thus on the 12th Rungpur reported 3·10 inches, and Matabhanga 3·21 inches; on the 13th Jamalpur in the Mymensingh District reported 3·12 inches, Julpigoree 5·68 inches, and Kalimpong in the Purneah District 3·00 inches; on the 14th Bahera in the Durbhunga District received 4·16 inches; and on the 15th Saugor Island recorded 3·99 inches, and Julpigoree 3·55 inches; and on the 16th Saugor Island again received 3·44 inches, Durgapur in the Mymensingh District 4·50 inches, and Buxa 4·44 inches; while on the 17th Moonshigunj reported 4·58 inches, Naraingunge 4·64 inches, and Laksham in the Tipperah District 5·11 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 18th of September 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May, 1885.

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, S. G.'s Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ...

The total fall of rain from 13th to 19th September 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The total fall from 1st January to 19th September 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman No. 85 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, p gloomy, d drizzling rain, p passing temporary showers, t thunder, Δ dew.

ALEXANDER PEDLER.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 21st September 1885.

The maximum temperature ... 91.2

The mean relative humidity ... 91%

The total fall of rain from 13th to 19th September 1885 ... 3.06 ins.

The mean temperature and humidity are obtained by applying to the mean of the 10n, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 21st September 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE main features deducible from the vital statistics of the principal Municipalities in Bengal for the week ending 5th September 1885, as indicated in the statement appended to this memoranda, are the following :—

1. That births and deaths were registered in these Municipalities in the proportions per 1,000 of population of 28·1 and 42·4, respectively, as opposed to 24·6 and 44·2 per 1,000, respectively, during the preceding week ending 29th August, exhibiting an improvement in the registration of births, and a retrogression in that of deaths.

2. That the following Municipalities returned the highest birth and death-rates :—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Bhagulpore	58·0	Chupra	102·5
Gya	41·7	Gya	88·1
Serampore	41·3	Bhagulpore	76·9
Chupra	41·0	Patna	70·4
Arrah	38·4	Utterpara	47·2
Patna	35·1	Suburbs of Calcutta	43·6
Chittagong	32·8	Monghyr	42·5
				Purneah	41·6
				Burdwan	33·6
				Puri	33·6
				Mozufferpore	32·8

3. That the mean rates at which the population of the Municipalities died from the principal diseases exhibit no noticeable differences in comparison with the mortality during the preceding week, *vide* figures given below :—

				Ratio per mille during the weeks ending—	
				5th September 1885.	29th August 1885.
Cholera	4·9	5·5
Small-pox	·03	·2
Fever	17·3	17·8
Bowel-complaints	7·9	7·3
Injury	·4	·6
Other causes	11·8	12·7

4. That of the above-mentioned diseases, cholera, fever, bowel-complaints, and the maladies classed under the head of "Other causes" were most fatal in the following Municipalities :—

Cholera.		Fever.		Bowel-complaints.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Chupra	34·2	Bhagulpore	38·9	Chupra	23·4	Gya	30·8
Gya	16·4	Utterpara	37·8	Patna	14·9	Bhagulpore	24·4
Bhagulpore	9·1	Gya	28·0	Suburbs of Cal-	11·0	Patna	21·4
Patna	8·8	Patna	24·6	cutta	10·9	Puri	21·0
		Purneah	24·3	Gya	10·7	Chupra	20·5
		Chupra	23·4	Hughli	10·7	Suburbs of Calcutta	11·6
						Monghyr	10·8

5. That the mortality of the week, classified under the heads of *Sex*, *Class* and *Age*, stands as follows :—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	42·7	Christians	...	26·1	Under 1 year	...	411·6
Females	...	42·1	Hindus	...	44·2	1 and under 5 years	...	83·0
Ratio of male deaths to every 100 female deaths	...	114	Mahomedans	...	39·0	5 " 10 "	...	21·4
			Other classes	...	36·4	10 " 15 "	...	20·8
						15 " 20 "	...	25·1
						20 " 30 "	...	23·2
						30 " 40 "	...	21·8

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE POLICE DEPARTMENT FOR THE YEAR 1884.

RESOLUTION.

POLICE.

Dated Darjeeling, the 18th September 1885.

READ—

The Report on the Administration of the Police Department for the year 1884.

Read also—

The Reports for the years 1882 and 1883, and the orders of Government recorded thereon.

THE Annual Report on the Administration of the Police Department for the year 1884 has again been submitted after due date, owing to the late receipt of the Divisional Commissioners' reports. None of these reports were received on or before the proper date. That of the Commissioner of Orissa was received only on the 21st April: that of the Commissioner of the Presidency Division not until the 1st May. The former states that the district reports of his division had all to be returned as being either incorrect or imperfect, and that none of them were finally completed until the first half of April. In the Presidency Division the latest district report was received by the 10th March, and there is therefore no apparent cause for the delay. In accordance with the orders contained in the Resolution on the report for 1883, an explanation of the failure to observe punctuality should have been submitted. This will now be called for.

2. The Chittagong Hill Tracts were constituted a separate general police district under Act V of 1861 from the 25th October 1884, and the Commissioner of the Chittagong Division was appointed Inspector-General of Police within the new police district. The police statistics of the Chittagong Hill Tracts are in consequence excluded from the report under review. Exclusive, therefore, of the accounts for the Chittagong Hill Tracts, the police budget grant for 1884-85 for the Lower Provinces amounted to Rs. 43,22,873. The actual expenditure is stated at Rs. 41,98,296. There was a saving, amounting to Rs. 1,83,353, under the heads of pay of executive police, clothing allowance, and fixed boat establishment, and an increase of Rs. 58,776 in expenditure under other heads. The saving in expenditure is, however, only nominal, as Rs. 2,67,000 anticipated savings were added to the budget grant. This course, in absence of some good reason, should not have been taken. In 1883 the police budget grant amounted to Rs. 43,56,518, and the actual expenditure to Rs. 41,70,698. The total sanctioned strength of the whole district police force of all descriptions, including the reserve, consisted of 73 superior officers, 3,435 subordinate officers, and 20,001 constables. At the close of the year the force was below the sanctioned strength by 1 inspector, 16 sub-inspectors, 25 head constables, and 242 constables. A net addition of 2 sub-inspectors and 42 constables was made to the force during the year for various reasons.

3. The cost of the force employed on purely police work is approximately estimated at Rs. 26,38,263, or 7.6 pies per head of population. In Bengal (excluding the Chittagong Hill Tracts) the cost was 8.5 pies per head, in Behar 6.0 pies, in Orissa 8.4 pies, and in Chota Nagpore 8.5 pies. The distribution of cost over the various provinces under this Government was thus the same as in 1883. There was an increase in expenditure of Rs. 4,785, due to the additions already mentioned to the police force. The proportion of police to area was in Bengal (exclusive of the Chittagong Hill Tracts) 1 to 5.8, in Behar 1 to 7.1, in Orissa 1 to 6.9, in Chota Nagpore, 1 to 18.6 square miles. The proportion of police to population was 1 to 2,856, 1 to 3,745, 1 to 2,680 and 1 to 2,922 in those provinces respectively.

4. In the absence in the present report of any prominent notice of the difficulty in obtaining recruits, it may, the Lieutenant-Governor trusts, be assumed that it has been met to a considerable extent by the grant of batta to men in the districts of Hooghly, Howrah, Midnapore, 24-Pergunnahs, Jessore, Moorshedabad, Dacca, Rajshahye, and Pubna. It is suggested that, as in Bengal generally many of the smaller municipalities are not towns, but large villages, and there is difficulty in obtaining men for the regular police, the irksome town work discouraging enlistment, a return to the chowkidari system would have much to recommend it. Such a change might very probably have a beneficial effect on enlistment, but would in other respects be a retrograde step, and is not one which the Lieutenant-Governor is prepared to support. No mention is made in the report of the working of the new fifth grade of sub-inspectors at independent outposts. It is presumed, therefore, that these officers have continued to work satisfactorily. Some progress was made in the lighting of towns. Lights were added in Burdwan, Moorshedabad, Patna, Shahabad, Mozufferpore, Monghyr, Deoghur, Sahebgunge, Rajshahye, Bogra, and Cuttack, and lighting was begun in Pooree. Little or no progress was made elsewhere; and, as the Inspector-General remarks, it is strange that in a wealthy and important port like Chittagong no attempt at even a commencement of lighting it has been made. The remarks made on this subject in the reports of the last two years, with the comments of the Lieutenant-Governor thereon, will be sent to the Municipal Department of this Government for such action as may be thought practicable.

5. The number of town and village police, not subject to the rules of the regular police, was 170,726. The average annual emolument of each man was Rs. 30.5, and the total annual cost Rs. 52,22,339. Each man watched on the average 60.7 houses. The reports on the working of the Chowkidari Act were not generally favourable. There was much irregularity in payment of the chowkidars, and the punchayets in many cases kept no regular accounts. It is satisfactory to observe that the complaints made refer almost exclusively to the present system of paying the

chowkidars, and not to their usefulness as a body. Cases of punishment of chowkidars decreased from 8,517 to 8,323. A draft Bill is now under the consideration of the Lieutenant-Governor, by which it is hoped to reform the defects in the present Act without abrogating its principle. Under the provisions proposed, the punchayets will be employed merely as assessing bodies, and will cease to perform any duties with regard to the collection of rates, or the payment of the chowkidars. Each thana will be divided into suitable blocks or circles, within which the rates will be collected by tehsildars. The appointment of the chowkidars will rest with the punchayets subject to the approval or veto of the Magistrate. If two-thirds of the punchayets do not agree, the Magistrate will make the appointment. The village chowkidars are to be appointed by the punchayets, but paid by the police. Pending the introduction of improvements under the provisions of the proposed Act, the Lieutenant-Governor looks to district officers to make the best of the existing system from which, with energy and care, good results are, experience has shown, obtainable. A striking instance of this is noticed in the report with reference to the sub-division of Tangail in the district of Mymensingh. Whilst elsewhere in the district the pay of chowkidars was in arrear, commonly for six months, and not uncommonly for ten months and even a year, in Tangail the Sub-Divisional Officer in a few months made the payments and reports regular and the attendance punctual, and thus showed that the reasons given for bad results in other parts of the district were groundless.

6. As noticed in the Resolution on the last report, the strength of the police on the East Indian Railway was revised during the year under review on the principle that the police were to be employed solely for the maintenance of law and order, the Company making their own arrangements for watch and ward of property. The force on this Railway now consists of 1 Assistant Inspector-General, 5 inspectors, 8 sub-inspectors, 7 European constables, 41 head-constables, and 175 constables. A scheme based on similar principles for a railway police for other lines in Bengal has, since the close of the year, received the provisional sanction of the Government of India and will shortly be in operation.

7. No change was made in the system of road patrols. The patrol in the Darjeeling district is said to have worked admirably. Punitive police were quartered only in two places in Backergunge. The special reserves were not employed on any extraordinary duty, and the detachments from Dacca and Bhagulpore, detailed for duty to the Chittagong Hill Tracts, returned to their head-quarters in June. The police maintained order at 168 fairs, attended by about three and a half millions of people. Convictions were obtained in 105 out of 132 cases reported, and Rs. 712 were recovered out of Rs. 993 stolen.

8. The percentage of educated men among the inspectors increased from 98.2 to 99.3, and among sub-inspectors from 94.7 to 98; among head-constables the percentage decreased from 80.4 to 78.6, and among constables from 27.9 to 27.5. The reserves are, it is stated, practically too weak to allow of much advance being made in education. To the same cause is attributed a want of progress in drill. The Inspector-General remarks that the station officers either know no drill, or have forgotten the little they ever learnt. Where practicable, men have been sent to learn drill with native infantry regiments with a view to their employment as drill instructors, and a compliance with the order that all writer-constables should go through a course of drill has been insisted upon at inspections. So long as the superior officers are deficient in knowledge of drill, it cannot be expected that the subordinates will make any progress. The Inspector-General is requested to see that this branch of their duties is less neglected for the future. These officers have education and intelligence, and with such assistance as is readily available and with a little perseverance and painstaking they should certainly have no difficulty in acquiring all that is insisted on—a mere rudimentary knowledge of the subject. In the Resolution on the report for 1883, it was noted that new smooth-bore carbines would be issued to the ordinary district police, and muzzle-loading rifled carbines to the special reserves to replace the unserviceable arms of the same description then in possession of the police. The new carbines are in course of issue. It is too early for an opinion to be expressed

on their serviceability. The Inspector-General should notice this subject in his next report.

9. The expenditure on police buildings from the Public Works Department budget decreased from Rs. 67,173 to Rs. 10,272: that from the Police budget increased from Rs. 1,00,081 to Rs. 1,01,515. The expenditure shown in the report under review was, however, for the financial year, whereas that shown for 1883 was for the calendar year.

10. The total casualties in the police decreased from 3,412 or 14.1 per cent. to 2,971 or 12.5 per cent. of the force. The death-rate was 2.4 per cent. against 2.2 in 1883. There were fewer retirements on pension or gratuity, resignations, discharges, and desertions; while in dismissals the increase was only nominal. The improvement is attributed to the fact that the useless men taken over from the old Municipal Police have been weeded out. The figures under most heads of casualty are, however, still considerably greater than in 1881. The highest percentage (5.7) of deaths occurred in Hooghly, though the percentage of sick in hospital was in several districts considerably higher than in that district. The Inspector-General on visiting the hospital found it an ill-arranged, overcrowded building, where no proper diet was given, the men being left to feed themselves. He proposes to see if the system in force in the Calcutta Police cannot be introduced. Detailed proposals from him will be awaited. In Jessore, Dinagepore, the Gurjats, Furreedpore, and Burdwan the admission into hospital exceeded 100 per cent. of the total strength of the force in each district. The percentage of admissions to hospital was lowest in Durbhunga (10.5) and Mozufferpore (13.0).

11. The number of judicial punishments of police under the Indian Penal Code decreased from 449 to 385: those under the Police Act from 294 to 243, departmental punishments without dismissal from 6,023 to 5,107, and dismissals from 764 to 708. The figures regarding departmental punishments cannot, however, it is stated, be trusted, as it has been the practice in some districts to show only fines and degradations. All departmental punishments should be fully entered, as otherwise inspecting officers cannot form a proper estimate of the discipline of the force. These officers should be careful to see that departmental punishments, especially fines, are not harsh or excessive in number. The general decrease in punishments inflicted on the police is satisfactory, if taken, as the Lieutenant-Governor hopes it may be, as an indication of improved conduct and discipline requiring less correction.

12. There were seven cases of torture by police. At Patna a sub-inspector was convicted of torturing by blows and kicks a man who was suspected of having embezzled Rs. 21, and of then laying a false charge of robbery to screen himself. The object of the torture was to make the accused confess in what manner he had disposed of the money. The injured man died. The sub-inspector was sentenced to three, one constable to two, and a second constable to one-and-a-half years' rigorous imprisonment. In Mymensingh a case in which there was strong suspicion of torture broke down on trial at the Court of Session. In Hazaribagh a head-constable and two constables were convicted of torturing some Dosadhs, who were suspected of house-breaking, by tying them up and beating them to induce confession. According to the special report received by Government on this case, the head-constable was sentenced to three years, one constable to eighteen months, and one constable to one year's rigorous imprisonment. At Chittagong a constable was convicted of torturing a thief to induce confession, and was sentenced to a year's rigorous imprisonment. Four other police officers were dismissed for being concerned in this case. The thief, when brought to jail, was paralysed, and bore marks of his ill-treatment. At Monghyr a head-constable, three constables, and two chowkidars were convicted of torturing five servants in order to induce them to confess to having robbed their employer. The servants were beaten, trussed with bamboos and tied, struck by a ruler on their joints, and their fingers squeezed against pieces of bamboo placed between them. The head-constable was sentenced to three years, the constables to eight months, and the chowkidars to three months' rigorous imprisonment each. The case in the Nuddea district, in which a constable, who acknowledged having beaten an accused person, and

having kept him awake by pouring cold water on him, was sentenced under Act V to a week's imprisonment and a fine of Rs. 10, requires fuller explanation. As the man was also guilty of allowing the prisoner in his custody to escape in the first instance, the case appears to the Lieutenant-Governor to have been most inadequately dealt with. This case was not specially reported to Government. The seventh case was pending trial at Midnapore at the close of the year. There were, in ten districts, 13 charges against the police of extortion, but none of them were, it is said, of any real importance. In accordance with the directions contained in the Resolution on the report for 1883, the police generally were informed through their District Superintendents, of the convictions and sentences passed on police officers for the grosser offences. The measures indicated in that Resolution for checking the commission by police of torture and extortion could have had little effect during the year under review, as they were only prescribed in the latter half of the year. Although not entirely confined to ignorant and low paid officers of the inferior grades, the Lieutenant-Governor observes that the majority of cases of this description reported during the year have been against officers of these grades. It is to be hoped that the persistent and sustained efforts of District Magistrates and Superintendents to check this form of crime, and the recognition by the police themselves that their position in the Government service will not shelter them in any way, but on the contrary will be considered an aggravation of the offence, may lead to a very considerable diminution of these charges of torture. In making these remarks, Mr. Cockerell does not overlook the fact that cases not unfrequently occur of offenders inflicting injuries on themselves for the purpose of fabricating evidence of torture against the police and procuring an acquittal for themselves. Two instances are quoted in the report where this defence was resorted to, and the Inspector-General proposes that more stringent measures should be taken to guard against its success through the corruption or apathy of jail subordinates, by insisting on the medical staff carefully examining all prisoners admitted. This proposal appears hardly practicable, but the Inspector-General of Jails will be asked whether some modification of it is not possible, supposing that its being carried out in its entirety is out of the question. A more feasible method of checking subsequent fabrication of injuries would perhaps be for the court sub-inspector, when a prisoner is first brought to him, to note in writing whether or not the prisoner bears on his person any sign of injury, and if so, to bring the fact at once to the notice of the Magistrate.

13. At the close of the year, 8,919 men wore one or more good-conduct stripes. Ten per cent. of the entire force of constables may, under the rules, draw the good-conduct allowance of Rs. 1 per mensem. The number of men who, wearing three stripes or more, were eligible was 2,214, but the amount placed at the disposal of the Inspector-General was not, he says, sufficient to pay the full sum required. The Lieutenant-Governor does not understand this: the sufficiency or otherwise of funds for such a purpose as this must, it is presumed, depend upon budget provision, and the Inspector-General should see that an adequate sum is always entered in the budget estimates for the year. Much of the value of this allowance as an incentive to good conduct must be lost, if it is not paid when earned, and it is not creditable to the department that such payments should ever have to be deferred. Money rewards were received by 2,049 officers and men. The percentages of officers and men who were Christians were 3·7 and ·3, of those who were Muslims 23·9 and 29·4, Brahmins 21·4 and 16·9, Rajpoots and Khetris 5·9 and 18·2, Goorkhas and Nepalis ·9 and ·9, Sikhs 1·1 and ·2, high-caste Sudras 28·9 and 13·9, low-caste Sudras 3·4 and 4·7, Hindus of all other castes 9·9 and 13·3, other religions including hillmen ·9 and 2·2 per cent. for officers and men respectively. Escapes from police custody increased from 206 to 216. Forty-six of the escaped persons were recaptured—a result which the Lieutenant-Governor concurs with Mr. Veasey in thinking an exceedingly poor one.

14. The character of the inspections made by District Superintendents of Police was referred to only by three Commissioners in their divisional reports. In future the manner in which this duty was performed should invariably be noticed by these officers. The Lieutenant-Governor agrees in the opinion

that the present system of visiting and inspecting thanas by District Superintendents should not be altered. From the Inspector-General's remarks, it would seem that the opportunity which these tours of inspection offer for obtaining useful information at first hand in matters connected with police administration is not sufficiently borne in mind, and that the record of their visits to the interior is too often a mere string of names of places visited, instead of a useful note of information obtained by personal local enquiry, and of the orders passed on matters brought to the notice of the District Superintendents whilst on tour. The matter is one on which special instructions might with advantage be issued by the Inspector-General for the guidance of officers.

15. Escort duty, though somewhat less than in 1883, was still very heavy. The statement given in paragraph 45 of the report shows that 26,528 men of all ranks were employed in escorting Rs. 17,58,06,138 and 14,123 prisoners. No treasure was lost, but it would seem that 86 prisoners escaped during transit. It is not stated how many of these were recaptured.

16. Deaths from suicide increased from 2,392 to 2,531. In Jessore (225), Nuddea (211), Gya (167), Cuttack (155), Dacca (115), and in the 24-Pergunnahs (104) the number of suicides exceeded 100. Accidental deaths increased from 26,762 to 26,903. During the year 10,771 deaths occurred by drowning, 9,466 by snake-bite, and 1,411 by wild beasts.

17. The percentage statements prescribed by the Government of India as tests of police work are—(a) in regard to cases, the percentage (1) of cases investigated by the police to cases reported, (2) of cases, police and direct, ending in conviction to cases decided, (3) of police cases ending in conviction to cases investigated, (4) of police cases ending in conviction to cases decided; (b) in regard to persons, the percentage (1) of persons released in police cases without being brought before a Magistrate to persons arrested by police, (2) of persons convicted in police cases to persons arrested by police, (3) of persons convicted in police cases to persons sent up for trial; (c) in regard to property, the percentage (1) of property recovered to property lost, (2) of cases in which property was recovered to cases in which property was lost. On these tests the Inspector-General observes:—"Test (a) 1 shows that police agency is most resorted to in the Presidency and Chota Nagpore Divisions, the other divisions varying from 79.0 in Bhagulpore to 72.0 in Dacca. Test (a) 2 is hardly a test of police work, including as it does direct cases. Under it Bhagulpore is far the best, with 55.9; only one other division (Patna) having more than 50. Rajshahye is last with 42.4—a position it also occupied last year. Test (a) 3 is of little practical value, since it includes false cases as well as cases in which the police were unsuccessful, or had not evidence enough to justify an arrest. Test (a) 4 seems to require amendment, including as it does direct cases decided, with which of course the police had nothing to do. Under it Bhagulpore comes first and the Presidency last, but the variation is inconsiderable—6.7. B form is so seldom used that the percentages under test (b) 1 are insignificant, varying from .6 in Chittagong and .8 in Orissa to 6.7 in Patna. Speaking generally, I believe that B form should be met with much oftener than it is; that is, that the police should use C form in unsuccessful cases where accused or suspected persons were virtually under arrest, though nominally only attending for the purposes of the investigation. In both the remaining tests of persons, Chota Nagpore comes first and Dacca last, but the discrepancies are not such as to call for detailed notice. In the property tests the Presidency Division is ahead, whilst the Rajshahye and Bhagulpore Divisions show worst." The percentage required of police cases ending in conviction to cases decided would certainly seem to be useless unless the cases decided were wholly police cases. This point will be referred to the Government of India, under whose instructions the statements have been prepared. With regard to the remarks of the Inspector-General as to the use of the B and C forms, he is requested to issue instructions to District Superintendents of Police that the cases of persons virtually under arrest, and finally released by the police on insufficient evidence appearing against them, should be entered for the future in B and not in C form.

18. The total number of cases, cognizable and non-cognizable, increased from 214,985 to 219,733, showing a net increase of 4,748 cases. There was an increase of crime in six out of the nine divisions. In the Presidency, Rajshahye and Bhagulpore Divisions there was an increase of 2,234, 1,252 and 2,885 cases respectively. In the Dacca Division, on the other hand, cases decreased by 3,453. In Bengal the percentage of cognizable cases was 46·5, that of non-cognizable cases 53·5. On the other hand, in Behar the percentage of cognizable exceeded that of non-cognizable crime, the figures being 58·2 and 41·8 respectively.

19. Cognizable offences reported increased from 104,454 to 112,365, or by 7,911. There was an increase in offences against property of 9,212, and in offences against public tranquility of 135. Under offences against the person there was a decrease of 347, and in other cases of 1,089. The increase in offences against property is attributed to a partial failure of crops and consequent high price of food acting as an incitement to crime. The increase in this class of crime was most marked in the Patna, Bhagulpore, Presidency and Rajshahye Divisions. There was a marked decline in excise and nuisance cases.

20. In Bengal the percentage of cases declared false decreased from 7·3 to 5·9, in Orissa from 8·9 to 6·5, in Chota Nagpore from 8·1 to 6·6. In Behar the percentage increased from 6·4 to 6·8. On the whole there was, it is stated, a decrease from 7·1 to 6·3. The Rajshahye, Patna and Bhagulpore Divisions were the only ones in which there was an increase. Cases excluded from the returns as false, through mistake of law or fact, increased from 8,699 to 9,572. It seems doubtful whether Magistrates have not in some districts, particularly Backergunge, shrunk from declaring charges to be wilfully false. The percentage of cases reported by the police to be false, but declared by Magistrates to be true, increased from 7·8 to 8·5.

21. Prosecutions for laying false charges decreased from 1,494 to 1,437, the percentage to total cases declared false rising from 20 to 20·3. There were 409 cases of convictions, against 466 in 1883; the percentage (31·2) of convictions to prosecutions remaining the same. The greatest success in convictions for laying false charges was obtained in the Chota Nagpore and Patna Divisions, where the percentages were 38·6 and 37·4. In the Dacca, Burdwan and Rajshahye Divisions the percentages were lowest, being 14·5, 16·9 and 19·6 respectively. From the statements given in the report it is plain that, in spite of the directions contained in the Resolution of last year, the increased supervision which Magistrates were ordered to exercise over their subordinate courts in the prosecution of persons laying false charges has not been exercised. Magistrates are still reluctant to sanction such prosecutions, and an instance is quoted in the report where a Deputy Magistrate at a sub-division declared 78 charges false during the year, yet refused to sanction a single prosecution. This is probably not a solitary example. Commissioners will be requested, in submitting their quarterly criminal returns, to state for each district in their divisions the number of cases declared wilfully false, and the number of prosecutions instituted for laying false charges, and to give, whenever necessary, an explanation of the small number of prosecutions. The Lieutenant-Governor does not consider that the judicial decision under which a complainant has a right to have his case heard before he is himself prosecuted for laying a false charge should create any difficulty in the ultimate prosecution of the original complainant. On the contrary, the enquiry should tend to simplify the case by bringing the facts more clearly to light and checking further fabrication of evidence. The hardship of putting an innocent person on his defence on the original charge, in order that the false case may be enquired into judicially before prosecutions are instituted, is adverted to by one of the Magistrates whose opinions are quoted in the report. The hardship is no doubt a real one, but it is of slight importance in comparison with the necessity of suppressing the practice of laying false charges. Commissioners will be asked further to draw the attention of Magistrates to the remarks contained in paragraph 15 of the Resolution on the report for 1883 on this subject.

22. Of 114,112 cognizable cases reported to have been committed during the year, or in previous years, and brought under enquiry within the year

21,165 were instituted directly before a Magistrate. The total number investigated by the police was 96,149, or 84·2 per cent. In 1883 the percentage was 83·8. No original police enquiry was made in 732 cases, but out of these, enquiry in 76 cases was afterwards made by order of the Magistrate. The percentage of cases not enquired into to cases reported was, as in 1883, ·6. The districts in which the number of enquiries refused was greatest were—Mymensingh (227), Nuddea (94), Lohardugga (49), Chumparun (47) and Pooree (40). The District Superintendent of Mymensingh endeavoured to show that the work was so heavy that the police had no alternative but to refuse enquiry in order to get through the work they already had to deal with. The Commissioner and the Inspector-General consider the explanation unsatisfactory. More than half the cases occurred in two thanas, and in these the increase was, it appears, only 4·5 per cent. In 1883 enquiry was refused in Mymensingh in 116 cases, and this was attributed to some improper instructions issued by the Magistrate to the police. There can be no doubt, as remarked elsewhere in the report, that the police force of Mymensingh is not only undermanned, but under-officered. There were 50 cognizable cases to each investigating officer, and 7·8 to each policeman; the average of the province being 4·9. The proposals of the Inspector-General for re-distribution of the police force of these provinces have not yet been received, and the Inspector-General is requested to hasten their submission. It is presumed that they will contain measures for the relief of this district. No explanation is given of the large figures for Nuddea and Chumparun. The Inspector-General will ascertain and report separately the cause of the large number of refusals in these districts. The majority of cases in which enquiry was refused at Lohardugga consisted of attempts at house-breaking. The Inspector-General has impressed on the District Superintendent the importance of attending to such cases. The increase in Pooree is, it is stated, accounted for by the issue by the late Assistant District Superintendent of an order, in which the Magistrate must have concurred, to the police to refuse to enquire into all cases of petty theft. Such an order is of course wholly illegal. The practice has been discontinued.

23. Excluding cases finally declared to be absolutely false, but including other C form cases, the percentage of convictions in cases enquired into by the police to true cases decreased from 41·9 to 39·8. There were 83,544 persons arrested by the police, and of these 56,583 were convicted. The percentage of persons convicted to persons arrested rose from 65·5 to 67·7. The percentage of convictions to men brought to trial was, as in the preceding year, highest in Darjeeling (82·3), Howrah (80·6), and Patna, (77·0), and lowest in Rungpore (50·0), Pubna (48·4) and Mymensingh (41·9). It is suggested that charges withdrawn or compounded under sections 248 and 345, Criminal Procedure Code, should be excluded in calculating percentages of convictions, so that the working of the police may be shown in a fair light. The suggested change would be useful, but cannot be carried into effect without an alteration in the prescribed form of returns. The point will be brought to the notice of the Government of India. Referring to the remarks made in paragraph 17 of the Resolution on his report for 1883, the Inspector-General states that District Superintendents have been called on to state what inspectors can usefully be employed on court work, their present duties being discharged by sub-inspectors, and that the replies received are now under consideration. His proposals will be awaited.

24. It would seem that the effect of section 495, Criminal Procedure Code, which precludes any police officer below the rank of Inspector from conducting a prosecution, has again been noticed in connection with the low percentage of convictions; the Magistrates of Patna and Chittagong particularly complaining that the strength of the local bar is generally found arrayed on the side of the defence. This, however, as the Inspector-General remarks, is no new thing; nor would it be improved by amending the law so as to admit of Court Sub-Inspectors of police undertaking the duty. The latter, with their numerous other duties to attend to, would have no more opportunity of making themselves acquainted with the facts of a case than the Magistrate who tried it, and would consequently be of little use, except before a Magistrate who carries judicial impartiality to such a length that he will hear, see and know nothing beyond what

he is told by the police on one side and the defence on the other. Officers of this description are rare, most Magistrates recognising the necessity of being something more than what Mr. Veasey describes as "mere judicial machines dealing with intangible abstractions." Still in some cases the Lieutenant-Governor is inclined to think the proposed amendment might be useful, and as it is confined to allowing Court Sub-Inspectors to prosecute, it is not open to the objection commented on by the High Court in the case of Ram Chunder Sircar, 13 L. R. 18 of police prosecuting cases, which they had been engaged in enquiring into. The matter is one of no very great importance, but as the contemplated amendment of the Criminal Procedure Code affords an opportunity which may not occur again for some time, the Lieutenant-Governor is inclined to recommend that section 495 should be amended to the extent of substituting for the words "below the rank of police inspector," the words "not being an inspector or a court sub-inspector."

25. In the result of trial of persons, the general percentages of convictions to arrests, of convictions to persons brought to trial, and of convictions to persons actually tried, compared with those of the preceding year, exhibit a decrease in offences under class I (offences against the State, public tranquillity, safety and justice), class II (serious offences against the person), class IV (minor offences against the person), and class VI (miscellaneous offences) with a slight increase in offences under class III (serious offences against person and property or against property only), and class V (minor offences against property). The percentages of convictions in serious and minor offences against the person were low. In Sessions trials the percentage of convictions increased from 57.6 to 59.3. In the districts in which the jury system has been introduced, the percentage of acquittals was in the 24-Pergunnahs 32.7, Hooghly 75.0, Burdwan 35.2, Moorshedabad 58.2, Nuddea 51.9, Patna 19.3, Dacca 51.5. The total number of convictions in these seven districts was 218, and of acquittals 180. The percentage of convictions in the jury districts was thus only 54.7, being considerably below the general average. In Patna there were 50 convictions to 12 acquittals. In Hooghly, on the other hand, there were only seven convictions to 21 acquittals, and of the latter 20 were cases of serious offences against the person. The District Judge of Hooghly will be asked to explain the reason of the large proportion of acquittals. In two cases in this district the High Court, it is stated, set aside the verdict and convicted, sentencing the accused to transportation for life. The Lieutenant-Governor has recently requested the Superintendent and Remembrancer of Legal Affairs to issue a circular to all Sessions Judges, pointing out that Government, under the present Criminal Procedure Code, cannot appeal against an erroneous verdict of acquittal delivered by a jury on the facts; that such verdict can only be reversed on a reference by the Judge to the High Court under section 307 of that Code; and that, if the Judge considers the verdict of the jury, or of the majority, so completely wrong as to make it necessary for the ends of justice that it should be revised, the Code renders it imperative on him to submit the case to the High Court. If Judges in jury districts are careful to exercise the check provided by law on verdicts of juries, there is no reason why palpable miscarriages of justice should not be rectified. The Inspector-General, in applying the remarks on the reluctance of juries to convict also to assessors, appears to have lost sight of the fact that Judges are not bound to conform to the opinions of assessors.

26. The number of cases in which property was stolen increased from 32,978 to 40,683, and of those in which property was recovered from 15,456 to 18,552. The amount stolen increased from Rs. 9,57,779 to Rs. 9,92,560, while that recovered decreased from Rs. 2,79,823 to Rs. 2,67,092. The percentage of cases in which property was recovered to those in which property was lost declined from 46.9 to 45.6, and the percentage of property recovered to property lost from 29.2 to 26.9. In eight districts—Burdwan, Howrah, Rajshahye, Julpigoree, Noakhelly, Mozufferpore, Maldah and Hazaribagh—the latter percentage exceeded 40, and it was lowest in Mymensingh (11.9) and Balasore (12.4). In Mymensingh only Rs. 9,046 out of Rs. 75,287 stolen, and in Balasore Rs. 1,058 out of Rs. 8,709 stolen, were recovered. In 1883, out of

Rs. 1,01,043 reported stolen in Mymensingh, the property recovered only amounted to Rs. 14,916. The weakness of the police in Mymensingh has repeatedly been noticed, and must be remedied in the general re-distribution of the force. The cause of the poor results in Balasore is not apparent. Although the totals do not vary considerably from year to year in these provinces, the percentages in adjoining districts, and in the same districts from year to year, show fluctuations which are difficult to comprehend without a knowledge of the special circumstances in each district. In reviewing the report for 1883, it was noticed that, while in Chumparun property was reported to have been stolen in 70 per cent. of the burglaries of which information was given, in Mozufferpore and Durbhunga the percentages were only 27 and 26, and the district officers were directed to ascertain for the future with greater exactness the amount of property taken. For 1884 the percentage in Chumparun is reported to be 72.0, in Mozufferpore 28.6 and in Durbhunga only 22.6, the percentage in Bengal proper being 76.1. It is obvious that the statements for Mozufferpore and Durbhunga must be incorrect: for, as the Inspector-General remarks, if burglary had more blanks than prizes, it would soon be abandoned as not worth the trouble and risk it entails. It is equally obvious that the suppression of the fact of property being stolen must lie with the police and chowkidars, as the original complainants would have little or no interest in reporting a burglary, and so courting enquiry, while at the same time suppressing the fact of theft of property which they wish to recover. In districts in which the Inspector-General considers the percentage is suspiciously low, District Superintendents either themselves, or through their Assistant Superintendents or trustworthy inspectors, must make local enquiries in at least 10 per cent. of the cases in which burglaries are reported to have been committed without theft of property. The Inspector-General will see that these orders are carried into effect.

27. The following statement shows the number of true cognizable cases under each of the six different classes for the last five years:—

	1880.	1881.	1882.	1883.	1884.
CLASS I.—Offences against the State and public tranquillity.	2,639	2,427	2,508	2,639	2,769
" II.—Serious offences against the person ...	4,061	4,301	4,267	4,684	4,618
" III.—Ditto ditto person and property, or against property only.	18,953	19,051	18,520	19,609	24,221
" IV.—Minor offences against the person ...	10,874	11,096	12,450	2,813	2,583
" V.—Ditto ditto property ...	34,859	35,673	34,301	37,690	42,630
" VI.—Other offences not specified above ...	24,086	24,056	27,151	29,554	28,477

Exclusive, therefore, of offences under classes III and V, regarding property, the large increase in which was due to the character of the season, the state of crime was normal.

28. Under class I, offences against the State and public tranquillity, there was an increase of 130. Rioting cases increased by 137, and offences of personating a public servant by 31. Under other heads there was a decrease. Both the percentage of cases ending in conviction, and of persons convicted decreased. There was but little change in the proportion of cases investigated by the police, or in the result of arrests. The riots were for the most part of a petty nature, and it is observed that out of 10,096 persons who appeared before Magistrates on charges of riot, only 167 were committed to the Court of Sessions. Riots increased in every district in the Presidency Division, except Moorshedabad, the total increase being 78. In the district of Jessore there were 41 more than in 1883. In the Patna Division rioting cases increased from 189 to 287. No explanation is given of the large increase in these two divisions. In the Dacca Division these cases decreased in all districts by 100. In Backergunge, a district formerly notorious for riots, there were only 67. Those in Mymensingh decreased from 262 to 214. There is a great diversity in the application of measures to prevent breaches of the peace. Thus, while in Mymensingh the number of cases in which persons were bound over to keep the peace was only 45, in Backergunge the number was 835. In the former district the action taken appears to have been too lax; in the latter, measures that might seem under ordinary circumstances unnecessarily

rigorous are justified when the character of this district for turbulence is remembered, and when their effect is seen in the remarkable diminution of rioting cases. But a small proportion of the riots was attended anywhere with loss of life. The immense majority was, as usual, due to agricultural disputes. The number of false charges of riot remained as in 1883—214. Coining cases numbered, as in the year 1882, 137. There were 72 persons convicted and 73 discharged by Magistrates; 25 convicted and seven acquitted at the Sessions of this offence. None of the cases appear to have been of any special interest. The cause of the increase in offences of personating a public servant is not noticed in the report.

29. In class II, serious offences against the person, there was a total decrease of 66. Cases of murder by poison decreased from 11 to 8; of rape, from 186 to 145; of attempts at, or abetment of, suicide from 385 to 376; of grievous hurt for the purpose of extortion or procuring confession from three to two; of administering stupefying drugs with intent to cause hurt from 17 to 8; of hurt by dangerous weapons from 1,076 to 1,064; of kidnapping or abduction from 281 to 198; and of rash and negligent acts causing death or grievous hurt from 82 to 69. Cases of attempt at murder rose from 41 to 49, of culpable homicide from 189 to 191, of grievous hurt from 752 to 791, and of exposure of infants or concealment of birth from 89 to 116. Under none of the heads was the variation of any great importance. The increase noticed in cognizable cases of hurt in 1883 was continued, though not to the same degree, in 1884, and there still exists reason for suspecting that the police exaggerate charges of hurt, so as to make them cognizable either as grievous hurt, or as hurt by dangerous weapons or means. In the Resolution on the Report for 1883, the Lieutenant-Governor directed Magistrates to adopt measures to prevent police officers from taking cognizance of any charges not strictly cognizable according to the present law. These orders have apparently not been complied with. The attention of District Magistrates will be drawn to these orders. The Inspector-General should himself obtain through the Magistrate an explanation from the District Superintendent in any district in which the police appear to be taking cognizance of cases not properly cognizable. The percentage of convictions to cases of rape reported true was, as usual, very small. Cases of exposure of infants increased in the Patna Division from 40 to 65. The cause of this result was the distress prevailing in that division. Cases of administering stupefying drugs are noticed separately in the report. Out of 7,310 persons arrested for offences under class II, 6,431 persons were brought to trial, and 2,709 only were convicted. The percentage of convictions to arrests, and of convictions to persons tried, were generally somewhat lower than in 1883. In Courts of Sessions, however, the results were slightly better, and the percentage of convictions to persons tried increased from 43·3 to 45·5.

30. Three murders were committed by dacoits, seven by robbers, eight by poison, and there were 243 murders of other descriptions. The total number was 266. In 1883 their number was 264. The number of murders varies but slightly from year to year, the tendency being on the whole to a gradual decrease; yet the proportion of persons convicted to persons tried has every year steadily decreased from 38·3 in 1879 to 18·7 in the year under review. As observed in the report, practically few murders are committed in cold blood, or after weighing the chances of escape, and therefore the unwillingness of the courts to convict does not exercise the evil influence it would exercise in the case of other offences. There is no reason to believe that the police are more prone to mismanage the conduct of the investigation now than formerly, and the only reason which suggests itself is that given in the report, viz. the growing disinclination of courts to convict for this offence. It is not, however, plain what proportion of the persons tried for murder is convicted of the lesser offence of culpable homicide not amounting to murder. The Inspector-General may notice this point in his next report. Meanwhile, in the absence of a distinct increase in offences of murder due to the decrease in convictions, the Lieutenant-Governor is not prepared to take further steps in the matter at present.

31. Fifteen cases of murders of infants by their mothers were reported. In two cases the offenders could not be detected; in four they were acquitted;

four more were convicted of murder, of whom three were sentenced to transportation for life and one hanged; three were convicted of the minor offence of concealment of birth, and sentenced to various sentences of imprisonment; one offender died in jail; and one was under trial at the close of the year. The Lieutenant-Governor reduced the sentence of a woman who, in 1883 on a quarrel with her husband, jumped into a well with her two children, of whom one was drowned, from transportation for life to seven years' rigorous imprisonment. No other remission of sentence was granted.

32. In class III, serious offences against person and property or against property only, there was an increase of 4,606 in cases reported true. The number of offences under this head was, in comparison with the figures of many previous years, unprecedentedly large. Offences of dacoity or preparation and assembly for dacoity increased from 120 to 168, of robbery in a dwelling-house from 8 to 18, of mischief by killing, poisoning or maiming animals from 767 to 815, and of lurking house-trespass or house-breaking from 17,656 to 22,173. The variations under other heads were inconsiderable. There were 3,292 persons convicted of offences under this class against 2,814 in 1883, and the percentages of convictions to persons who appeared, and of convictions to persons tried (46·9 and 50·9) were slightly higher than in that year. As will be noticed in reviewing the statistics of offences under class V, there was a large increase in thefts, and the general increase in offences against property was undoubtedly due to high prices and to the distress which prevailed during part of the year. No explanation is offered of the increase in offences of causing mischief to animals of the value of Rs. 10 or upwards. Offences of mischief by fire are included in other offences of serious mischief which numbered 639. The Inspector-General is requested to notice this class of offence separately in future reports. Robberies decreased from 171 to 167. There is little variation in this form of crime from year to year. As noticed in the Resolution on the report for 1883, the Inspector-General, with the sanction of Government, issued a circular directing District Superintendents to give every facility to postmasters in the way of furnishing them with information and granting escorts, when remittances had to be made, and submission at the close of the year was promised of a special report on the working of the rules. The report has not, however, up to the present time, been submitted.

33. Including cases pending from 1883, there were 171 dacoities—more than in any year since 1879. The increase occurred in every division except Bhagulpore and Dacca. In the Burdwan Division they numbered 34, in the Presidency 29, in Chota Nagpore 17, and in Patna 21, against 26, 16, 8, and 11 respectively in 1883. In each of the districts of Hazaribagh and Dinagepore 10 dacoities occurred, in Rungpore, Gya, and the 24-Pergunnahs 15, and in Beerbhoom 12. Of 656 persons who appeared before a Magistrate charged with this offence, 129 were convicted and 404 acquitted. The percentage of convictions to those who appeared being 19·6, that of convictions to those tried 24·2. These results are very unsatisfactory. The percentage of property recovered to property stolen decreased from 14·4 to 7·9. The value of property reported stolen was, however, much less than in 1883, being Rs. 37,618 against Rs. 61,460. The latter percentage is of very small value, as hardly any reliance can be placed on the statements of complainants as to the amount of property of which they have been robbed. In reviewing the crime statistics of 1883, it was remarked that many offences against property, which are technically described as dacoity, are in reality of comparatively slight importance, requiring no special means to check them, and the Inspector-General was asked in future reports to indicate more clearly what proportion of the reported dacoities there was reason to believe was committed by professional dacoits. In his present report the Inspector-General states that two-thirds of the reported dacoities have been declared to be merely technical; but he observes, accepting as the definition of a technical dacoity, an occurrence in which the offenders are known and belong to the neighbourhood, and are not members of an organised gang, he is unable to accept the classification as correct; it having been found on inspection that local officers have been too ready to minimise an outbreak of crime by declaring the majority of the dacoities

to be technical and of no importance. He, therefore, proposes to use the word "local" instead of "technical" as distinguished from "professional" dacoits. By the term professional dacoits, however, was meant persons organized into gangs for the purpose of systematically committing robbery by violence, whether locally or otherwise. The Inspector-General, to whom special reports of dacoities are submitted, will himself be best able to judge which of the offences are committed by this the more dangerous class of offenders, and it is to the suppression of this class that the energies of the police should be chiefly directed. With a view to more effective surveillance, and to guard against the omission of names not now on the registers, District Superintendents have, it is reported, been directed to make lists of all persons convicted or reasonably suspected of dacoity. Endeavours should further be made to ascertain from convicts under sentence whether they are connected with any organization for commission of dacoity, and promise should be made to such a criminal of remission of part of his sentence in the event of his giving material information leading to the conviction of other professional dacoits. The Inspector-General remarks that the crime is fostered and encouraged by the arrant cowardice of the people plundered, who will neither make any show of resistance, nor even follow up and trace the offenders, and that the remedy lies with the people themselves, who invite attack by their own helpless timidity, and from their rooted belief that everything is to be done for them. This is no doubt the case; but the nature of the people cannot be changed, and since they will not stir to protect themselves, the best means available must, under the circumstances, be taken to protect them. An example of the difficulties with which the police have to contend occurred in Midnapore; where it is reported the householder who had been robbed attempted to hush up the matter for fear the women of his household should be cited as witnesses.

34. Minor offences against the person under class IV decreased from 2,813 to 2,580. Owing to the large number of cases in which compromise is effected, these amounting in the year under review to 457, the percentages of convictions are always low. There was a large decrease of 217 cases in the Dacca and of 76 in the Presidency Division, of which no explanation is given. There were no other fluctuations calling for remark.

35. Offences under class V, minor offences against property, show an increase of 4,940. Offences of receiving stolen property were more by 278, of cattle-theft by 475, of criminal or house-trespass by 576, of ordinary theft by 3,767 than in 1883. Cases of criminal breach of trust declined by 111, and there were small decreases in minor offences of lurking house-trespass or house-breaking, or breaking a closed receptacle. Percentages of convictions generally showed a slight improvement. In order to facilitate comparison with the results of former years, the more serious offences of lurking house-trespass, house-breaking, and house-trespass with intent to commit an offence, have been included in the statistics of this class in reviewing offences under it. Including those offences, there was an increase in every division except Dacca, and in every district except Balasore, Jessore, Mozufferpore, Mymensingh, Noakholly, Shahabad and Tipperah. The bulk of the increase was in thefts and burglaries. The increase in the two Behar Divisions—Patna and Bhagulpore—was great in comparison with that which took place in Bengal. Out of 65,051 offences occurring in these provinces, 24,634 occurred in those two divisions; but the increase in the latter amounted to 4,804, or considerably more than half the total increase. Bad harvests and consequent high prices, acting especially in Behar as an inducement to crime, were the undoubted, as they are the assigned, cause of the increase. Among the seven districts noticed above, the decrease in Balasore, Tipperah and Noakholly was merely nominal, and calls for no remark; for Jessore, in which there were 212 cases less, no explanation is given; in Mozufferpore the decrease, though only nominal, was remarkable, taken with the large increase in the neighbouring districts, and should have been fully explained; in Mymensingh 424 offences were reported less than in 1883—a result which is ascribed, and can only be ascribed, to the bad state of police and criminal administration in that district; for Shahabad, in which there was a decrease of 58 cases, no explanation is given, though the district is in a division where the increase was generally great. The

Sonthal Pergunnahs (677) and Bhagulpore (551). It is difficult to understand the reason of the fluctuations in the number of offences of the same class in different districts within the same division, and apparently under the influence of the same general causes which affect the criminal population. Thus in the Presidency Division there was a large decrease in Jessore, with a very large increase in Nuddea; in the Rajshahye Division the increase was only nominal in Julpigorce, while in Rungpore it exceeded 37 per cent. The cases of Mozufferpore and Shahabad have been already noticed. Commissioners of Divisions should deal with this subject more thoroughly in submitting their divisional reports.

36. In reviewing the crime statistics for 1883, the Lieutenant-Governor requested the Inspector-General to impress on District Superintendents the necessity of giving clearer explanations, when submitting their annual statements, of the fluctuations between the number of thefts and that of burglaries in their districts. Instructions to District Superintendents were accordingly issued by him, and explanations given by some of the officers are briefly summed up in his report. They are for the most part superficial and unsatisfactory, and show that the officers do not themselves understand the causes which are operating. The Inspector-General observes generally: "The main reason for these fluctuations is to be found in want of uniformity in procedure and classification, and I may add to this that it is a fallacy to suppose that what influences one class of offence will influence the other. In Behar and Western Bengal the third quarter of the year is the best suited to burglaries, as the mud walls are then softened by damp, and the pattering of the rain on the tiles on a wet night deadens the sound of the burglar's tools. Elsewhere the weather gives no such assistance, but the houses are for the most part so flimsy and insecure that theft can be distinguished from burglary only by an arbitrary and artificial distinction, and throughout the Lower Provinces there will always be most thefts at the seasons when crops are ready to cut, or the grain is left unprotected on the threshing-floor." The opinion is cited of Mr. Stack, now Deputy Inspector-General, who points out that the recognition of an anomaly implies an assumption that both classes of offences are influenced by the same causes, which is not the case; theft including not only theft by professional thieves, but also offences which are merely technically thefts, occurring in the course of disputes about land, and having no connection with burglary. It is no doubt true that the two classes of offences are not influenced in their occurrence by exactly the same causes. They are, however, influenced by the same chief general causes, viz. the needs of the criminal population and the repressive action of the police and criminal courts. Other causes are inconsiderable and to some extent neutralize each other in the course of the year. The Lieutenant-Governor is inclined to agree with the opinion that the fluctuations in the two classes of crime are not in their actual occurrence, but in their classification. On this point the Inspector-General will no doubt inform himself more exactly in the course of his inspections.

37. In offences under class VI, including offences not included in the other five classes, there was a decrease of 1,077. With the exception of the year 1881, in which there was a nominal decrease of 32 cases, the rise since 1878 had been constant and great. In 1878 offences under this numbered 14,996; in the year under review they were 28,477. Public and local nuisances declined from 22,071 in 1883 to 20,709, while offences under the Excise laws declined by 565. Offences under the Arms Act, on the other hand, increased by 122, and those under special and local laws by 205. Nuisance cases largely increased in the Presidency Division, and in Dinagepore of the Rajshahye Division the reported cases increased from 371 to 1,330. The cause assigned is increased activity on the part of the police. In Patna there was a decrease of 1,342 in these cases, due, it is stated, to the Patna Courts, that is, apparently the Honorary Magistrates, by their leniency towards delinquents, discouraging prosecution by the police. A large decrease in Bhagulpore is attributed to a change in procedure of the Bench of Magistrates, who now refuse to convict under section 34, Act V of 1861, persons sent up for committing nuisances elsewhere than on the road.

38. There were 1,260 persons tried for bad livelihood, of whom 774 were

shows that prosecutions are still instituted with too great frequency. In the five districts of Beerbhoom, Rajshahye, Julpigoree, Mymensingh and Pooree, there were 89 institutions and only 24 convictions. Charges of bad livelihood instituted by private persons increased from 120 to 144, of which 99 arose in six districts. Such charges are naturally open to suspicion. The trial of persons accused of bad livelihood on the average remained pending in Bengal 38·6 days, in Behar 20·6 days. The average duration in Julpigoree was 148, in Mymensingh 145, and in Jessore 140 days, while in Sarun a single case remained pending for 1,318 days. Explanations will be called for from the district officers of these four districts. The Inspector-General observes that results certainly do not show that prosecutions have been instituted indiscriminately, but the amount of work at head-quarters now-a-days is such that it is often difficult to find an officer to take up a case locally, whilst another difficulty is that only specially selected Magistrates can now exercise powers under section 110, Criminal Procedure Code. It appears to him, however, that more cases might be tried by District Magistrates while on tour. Looking to the result in convictions of trials, the only safe test in such cases, the Lieutenant-Governor does not feel sure that the prosecutions might not be considerably reduced. It is of course possible that a number of cases break down owing to the unreasonable time taken in their disposal. Work at the head-quarters of a district is no doubt heavy, and at certain seasons it is extremely difficult, if not impossible, to depute an officer to the spot for the purpose of locally trying these cases. But at the same time Mr. Cockerell must record his opinion that much of this difficulty would be got over if Magistrates would exercise a little more forethought and method in the arrangements made for the disposal of cases of this description. Obviously, as far as possible, these cases should be taken up in the cold weather, when, with the Magistrate or the Joint-Magistrate and all the sub-divisional officers in camp, a great deal of the work might be got through. Excluding wandering, homeless thieves who, as remarked in the Resolution on the Police Report for 1883, should be tried as soon as sent up, the names and villages of those it is desirable to prosecute are perfectly well known, and the Lieutenant-Governor feels confident that there is hardly a district in these Provinces in which it would not be possible to depute a competent officer to take up such cases at least once a quarter; if in some instances, owing to special circumstances, this is found impossible, the position must be accepted and the cases taken up when a convenient opportunity occurs. As regards the difficulty that only specially selected Magistrates can now exercise powers under section 110, the Lieutenant-Governor believes that nearly all officers exercising first class powers, to whom the selection is by law confined, have been invested with powers under this section. Where this has not been done, District Magistrates have only to apply, and the difficulty will be at once removed. It is satisfactory to observe that the number of bad characters under police surveillance was reduced from 48,269 to 46,806. The Inspector-General states his belief that the number is not susceptible of anything like a substantial reduction, and cites the fact that enquiries in the dacoity circles have brought to light numbers of instances of old dacoits whose very existence was unknown and unsuspected by the local officers. The greatness of the numbers on the registers is, however, the chief obstacle to effective scrutiny, and is the very reason why criminals who should be very carefully watched are able to commit crime unsuspected. The Lieutenant-Governor finds it difficult to believe that in Midnapore 2,593, in Dacca 2,318, in Moorshedabad 2,262, and in Bankoora 2,137 persons are kept under effective surveillance by a police burdened with many other duties, or that such surveillance is necessary in so many cases. If only those criminals who are on good ground suspected to be habitual are watched by the police, the Lieutenant-Governor believes that the number on the registers is capable of being much lessened. It is of course not meant that the reduction should be hasty and indiscriminate, but the necessity for it must be constantly kept in view and the importance of the duty impressed on District Superintendents.

39. Offences against Excise and Opium laws declined from 3,171 to 3,143. There was no variation of any moment in this class of offence.

Offences against the Salt laws fell in Bengal from 1,437 to 1,088, and in Behar from 903 to 773; decreases in Midnapore and Howrah are stri-

a decline from 142 to 28 cognizable salt cases in the Chittagong district, to an increase in the consumption of duty-paid salt, and discontinuance of employment by the police of boatmen in detection; of a decrease of 101 cases in the Orissa Division no explanation is given.

Offences under the Arms Act rose from 1,082 to 1,204. In the Patna Division the number of cases rose from 113 to 225. No reason is given. There was no other fluctuation of importance. In the 24-Pergunnahs, the Magistrate remarking on a decrease from 38 to 5, stated that it was his policy not to prosecute, but to induce persons to take out licenses.

40. Offences committed on the East Indian Railway are included in the criminal statistics of the districts in which they occur. There were 608 true cases reported, chiefly under the head of theft, against 690 in 1883. Four hundred and thirty-six non-cognizable cases were enquired into, 89 of which were of cattle trespass. No case of heinous crime was reported. The police are stated to have been very successful in dealing with professional crime and careful in tracing the antecedents of accused persons. Rupees 1,332 were given as rewards for detection in 12 opium cases. Thefts of rail spikes increased, 1,061 having been stolen against 452 in 1883; only seven persons, however, were convicted. Seventeen cases of obstructing the line occurred; of 34 persons sent up for trial, 23 were children. In a serious case, the accused in which were railway employes, one accused was sentenced to ten and a second to seven years' rigorous imprisonment.

There were 123 railway accidents, and 73 persons killed, 13 being servants of the Company; of the rest 12 were cases of suicide. Only 35 persons were injured, of whom 15 belonged to the general public. It is stated that eight accidents were petty collisions, and that none were of a serious character. This statement, in the face of the fact that 48 persons, excluding the 25 above mentioned, met their deaths in them, seems open to question.

41. Previous convictions were proved against 1,482 convicts. In 1883 the re-convictions numbered 1,159. The increase was spread over every division except Dacca, and being coincident with the general increase in cognizable crime, calls for no special remark. Photographs were taken of 142 criminals, among whom were 50 Burwars of the Gonda criminal tribe, 38 railway pick-pockets and two poisoners. Photographs are now circulated to all Central Jails; six men were recognized by their photographs. No details of expenditure or method are given in the report. In future reports the Inspector-General should notice to what extent previous convictions of offences, for which on repetition enhanced punishment is provided under the Indian Penal Code or Whipping Act, were proved before sentence against offenders was passed; to what extent assistance in proving such previous convictions was rendered to the police by jail officers, and should state what suggestions, if any, he has to make towards improving the detection of previously convicted criminals. The settlements of the criminal Mughya Domes in the districts of Chumparun and Sarun were noticed at length in the Resolution on the report for 1883. During the year under review those in Chumparun stood successfully the test of a bad season. In Sarun the attempts made to reclaim them have, it is stated, reduced the number of burglaries from 815 in 1882 to 507 in 1884.

42. Of non-cognizable offences the number decreased from 110,531 to 107,368. Offences under classes II, IV, V, and under special laws, increased by 1,088, while under classes I, III and VI the decrease amounted to 4,251. A decrease of 394 in class I, offences against the State, &c., was chiefly under offences against public justice and offences relating to weights and measures. In class II, serious offences against the person, an increase of six cases calls for no remark. Under the head of extortion in class III there was a decrease of 202. Minor offences against the person, class IV, show a curious variation in a fall of 857 which occurred under the head of criminal force; and a rise of 1,386 under the head of voluntarily causing hurt. In cases of mischief in class V there was an increase of 393 cases. In other offences under class VI there was a fall, occurring under every heading except that of offences against religion, of 3,655, proceedings under chapters VIII A, X, XII and XXXVI alone having fallen from 6,182 to 3,478. A large part of the latter reduction was.

in Backergunge and Furreedpore been included incorrectly in class VI of non-cognizable crime. This explanation may in part account for a decrease in the number of persons against whom proceedings are shown as taken under chapters VIIIA (security for keeping the peace on conviction), X (public nuisances), XII (disputes as to immoveable property) and XXXVI (maintenance of wives and children), Criminal Procedure Code, in Backergunge from 6,063 to 18, and in Furreedpore from 3,475 to 723. The decline is, however, startlingly large and was not accompanied by a corresponding rise in proceedings under chapter VIII B, Criminal Procedure Code, shown under cognizable crime. Of offences under special laws, pound, vaccination and municipal cases showed a considerable increase, while offences under the Salt, Police, Chowkidari, Excise, Arms and Stamp Acts declined. The police were employed to enquire into 4,973 charges. The general percentage of cases in which police agency was employed fell from 6.4 to 4.6. So far the reduction was satisfactory; but as 2,090 of the cases were of criminal force or hurt, it is obvious that the directions to Magistrates of districts to discourage the excessive issue of orders to the police for enquiry into this class of offence have been disregarded. No good reason exists for the frequent employment of police in investigating petty non-cognizable offences which can most properly be dealt with directly by Benches of Honorary Magistrates and Magistrates of the lower grades. The Inspector-General is requested to bring to the notice of Government the case of any district in which the agency of the police is too frequently employed to investigate non-cognizable crime, especially offences of voluntarily using criminal force and causing hurt.

43. The percentage of police charges disposed of by Magistrates with less than three remands was 73.0 against 74.7 in 1883. The percentages of remands vary but little from year to year, and are not on the whole unsatisfactory. They are worst in the Dacca, Chittagong and Orissa Divisions, and best in the Burdwan and Presidency Divisions. District officers as a rule appear to be alive to the necessity of checking frequent remands on the part of their subordinates. Where these occur it is generally because the District Magistrate does not look after his subordinates' work, and because the latter are themselves dilatory and procrastinating. The chief object to which District Magistrates should direct their attention is that witnesses are not needlessly detained and harassed by frequent adjournments for trivial reasons.

44. The usual complaints were made of want of detective ability among the police and of their inefficiency in some of the unhealthier districts. Their conduct and efficiency on the whole, however, is reported to have been satisfactory. The office of Inspector-General was filled by Mr. Lyall up to the second of November, when he proceeded on deputation as Commissioner of Chittagong, and was succeeded in his office by Mr. Veasey. The Lieutenant-Governor has to thank the latter officer for his careful and intelligent Administration Report.

ORDER.—Ordered that a copy of the above Resolution be forwarded to the Inspector-General of Police and the Commissioner of Police, Calcutta.

Ordered also that a copy of the Resolution be forwarded to all Commissioners of Divisions for information.

Ordered also that a copy of the Resolution, and extract paragraph 50 from the Report, be forwarded to the Appointment Department of this office for information.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Chief Secretary to the Government of Bengal.

RESOLUTION ON THE REPORT OF THE SHIPPING OFFICES IN BENGAL FOR 1884-85.

MUNICIPAL DEPARTMENT—MARINE.

Darjeeling, the 17th September 1885.

RESOLUTION.

READ—

A. Report from the Board of Revenue, No. 459B, dated the 9th July 1885, on the working of the Calcutta Shipping Office and of the Shipping Offices at the several outports for the year 1884-85.

An important change was introduced during the year in the system of accounts in the Calcutta Shipping Office with the view of securing an efficient check over the receipts of the Shipping Master's Office, Calcutta. The treasury at the Shipping Office was abolished, and its pecuniary transactions reduced to a minimum by substituting payment by cheques on the Bank of Bengal, instead of by cash as heretofore. The full effects of this change had not become perceptible before the close of the year, but the Shipping Master states that it has afforded satisfaction, and that no difficulties have arisen.

2. The financial results of the working of the Calcutta Shipping Office during the past year were satisfactory, the receipts having amounted to Rs. 25,768, the disbursements to Rs. 21,325, and the net profits to Rs. 4,443. Compared with the preceding year, the receipts show an excess of 5 per cent., attributable chiefly to the discharge and re-engagement at the Calcutta port of the crews of certain vessels which used formerly to ship and discharge their crews at Bombay. Under recent orders of Government these vessels will be permitted to retain their crews and discharge them at Bombay. The general business of the office seems to be still slightly on the decline, owing to the continued depression of trade. The expenditure shows a small increase of 1·9 per cent. over that of the preceding year.

3. There has been a decrease in the year's transactions in funds held in trust by the Calcutta Shipping Office on account of both European and Native seamen, as shown below :—

			1883-84.			1884-85.		
			Rs.	A.	P.	Rs.	A.	P.
Balance	7,224	9	5	6,299	10	8
Receipts	59,486	11	7	56,452	8	11
Total	66,711	5	0	62,752	3	7
Repaid and lapsed to Government			60,411	10	4	58,992	14	9
Balance	6,299	10	8	3,759	4	10

The largest decrease was under the head "Deposit money of British seamen," and this decrease is explained by the fact that, during the greater part of the year, there was such a demand for seamen that they were permitted to get their discharge without anything being deducted from their wages and deposited in the Shipping Office as security against their falling into distress. The whole of the amount received during the year on account of the estates of deceased British seamen was credited to the Board of Trade, who are the administrators of their estates. The figures showing the transactions in connection with the deposit money of native seamen are better than last year's; but it appears that, as usual, the greater part of the unpaid balance under this head was disposed of by lapse to Government.

4. The number both of seamen shipped and seamen discharged through the Shipping Office show an increase as compared with the previous year, being 15,649 and 14,438 against 14,804 and 12,364 respectively. The increase is attributed to the authority given during the year to the Shipping Master to act upon the construction of the Legal Adviser to Government of section 21 of Act I of 1859. Under this construction ships were bound to discharge their crews on return to India from a foreign port, even though they had not arrived at their final destination, and, when necessary, to re-engage the same crew under a fresh agreement for a second voyage. These discharges and re-shipments contributed to swell the total number of shipped and discharged

seamen. The Advocate-General has since re-considered the question, and it has now been declared legal for ships to retain their crews until they reach the final port of destination.

5. There was a decrease in the amount of the remittances by money-orders sent home by British seamen. The Shipping Master states that the amounts of the individual money-orders issued during the year were smaller than those of the orders issued during the previous year. This class of receipts is, however, liable to great variations, as the following figures for the last five years will show :—

					£
1880-81	2,045
1881-82	1,837
1882-83	3,665
1883-84	7,069
1884-85	2,546

and the figures for 1883-84, Captain Stiffe states, were unusually high. On the condition of European seamen, the Shipping Master writes that "they are generally quiet and well-behaved, and that the number able to write continues to increase, as scarcely a man can now be found who cannot sign his name and examine his account of wages."

6. Fifty-four distressed seamen, for the most part invalids, were sent home during the year. Desertion slightly diminished in number owing, it is stated, to the diminution in the number of seamen visiting the port. The general health of European sailors at sea is reported to have been good. Twenty-seven casualties happened during the year against 33 in the previous year. Fourteen cases of scurvy occurred in six vessels which arrived during the year, five of them in one vessel, the *Compta*. It is believed that the men attacked brought the 'germs' of the disease with them on board, enquiry having shown that the men had no complaints to make about their provisions and that lime-juice had been regularly issued. The Lieutenant-Governor observes that these men had come from New York and San Francisco; and that all the vessels affected (except the *Blythwood* from Liverpool) came from North America.

7. The health of the lascars is also stated to have been good. There were no important cases of sickness among them. Four complaints regarding the quantity, quality and short issue of provisions while at sea were made during the year. Two of those were on enquiry found to have been made without sufficient grounds, while in the other two compensation was awarded. In regard to the condition of native seamen, the Shipping Master says that "these men are much in the same condition as hitherto. They are, with the exception of the Goanese Christians, very improvident and ignorant." There has not been much change in the practice existing among the lascar crews of Calcutta of giving substitutes. The Assistant Shipping Master estimates the number of such substitutes at quite 8 per cent. of the total number of Asiatics shipped through the office.

8. The practice of the payment of wages to discharged seamen at contract rates of exchange is said to have greatly increased. From January to August 1883, 298 men out of 13,398, or 22 per 1,000, were paid in this way; while from January to August 1884, the number was 955 out of 9,867, or 96 per 1,000. It is said to have been ascertained by enquiry that each seaman understood fully the effect which his discharge in India had upon his wages; but no cause is assigned for this striking increase, and the Lieutenant-Governor finds it difficult to believe that men would voluntarily make such bad bargains for themselves. These contract rates are said to be found in the agreements of sailing-vessels only.

9. In paragraphs 27 to 30, the Board of Revenue have given a full account of the various important matters affecting the interests of seamen which came under consideration during the year. One is that referred to in paragraph 4 of this Resolution, and, as already remarked, the question has since been finally disposed of. It had been the custom for lascars not to attach their own signature or mark to the articles of agreement, but merely to touch the pen after the Shipping Master had inscribed their names. As the validity of this custom was liable to be disputed in a court of law, instructions were given at the suggestion of the Superintendent of Lascar Transfers at the Victoria Dock,

London, for the adoption in India of the course followed in England, viz., that the seaman, if he cannot write, should make his own mark, the Shipping Master certifying the fact. The shipping officers were also directed to explain clearly to lascars that, when they sign agreements, they are liable to transfer (for return to India) to any vessel which the authorities in the United Kingdom may consider to be a fit and proper vessel. The passing of the Indian Merchant Shipping Act V of 1883 necessitated a change in the form of the agreement between master and seamen, and the question is still under consideration.

10. The receipts of the Chittagong Port Office fell from Rs. 396 in 1883-84 to Rs. 343 in 1884-85. The decrease is said to be due to a smaller number of native lascars having been both shipped and discharged. The receipts on account of the deposit of wages of British seamen amounted to Rs. 6,758 against Rs. 8,251 in the previous year, and those on account of the wages of deceased British seamen to Rs. 15. Nothing was shown under the last mentioned head in the previous year. Deposit money on account of wages of discharged native seamen amounted to Rs. 1,945 against Rs. 2,907, and the amount received on account of wages of deceased native seamen to Rs. 35 against Rs. 57. The whole of the deposits of wages due to discharged and deceased British and native seamen, except Rs. 59, was paid over. This balance of Rs. 59 has been held in deposit on account of the wages of a native seaman, who was sentenced to three months' imprisonment. One hundred and thirty-two seamen were shipped at Chittagong against 237 of the previous year, and 166 discharged against 215 in 1883-84. The decrease is attributed in the former case to a smaller number of British Indian registered vessels carrying crews under agreement having cleared from the Port of Chittagong consequent on the depression in foreign export trade, and in the latter case to some vessels that engaged crews under agreement at this port in the previous year having discharged them at other ports. One hundred and six ships were visited by the Shipping Master during the year. No cases of scurvy were detected, and the health of the seamen is reported to have been satisfactory. There were two cases of cholera in the port during the year. There were 18 deaths among seamen, two at sea and 16 in port. Desertions fell from 17 to 12 (11 Europeans and one native). Convictions of seamen by Magistrates rose from 34 to 64, and the increase is reported to be in cases of drunkenness, of which 40 were reported against 17 of the previous year.

11. The transactions in the Orissa ports seem to have been few and unimportant. Ninety-nine seamen were discharged and two shipped during the year, against 50 and 0 respectively in the year previous; two deaths occurred during the year among seamen, and 62 visits were paid to steam-ships and 25 to sailing-vessels. The only complaint made was one by the Commander of the French barque *Maridian* of the inferior quality of the water supplied.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Government of Bengal.

RESOLUTION OF THE GOVERNMENT OF BENGAL IN THE REVENUE DEPARTMENT ON THE RECENT FLOODS IN BENGAL.

Dated "Rhatas," the 29th September 1885

IN the course of his journey by river from Calcutta to Kishnaghur, where he arrived on the evening of the 26th September, the Lieutenant-Governor has had the opportunity of ascertaining, by personal observation, the actual condition of the people in a large portion of the area inundated in the Hooghly, Burdwan, and Nuddea districts. He has himself visited several flood-d villages, and has conferred with the officials, landholders, and cultivators of the area affected. In replying to the Deputation which waited upon him in Calcutta to urge that a public subscription should be raised for the relief of those who have suffered from the floods, Sir Rivers Thompson, while expressing his readiness to preside at a public meeting for the purpose of organizing relief, advised the members of the Deputation to wait until fuller knowledge had rendered it possible to gauge the extent and consequences of the disaster more exactly, and at the same time undertook to publish, from time to time, the official information which might reach him. Accordingly, the reports of the Collectors of Nuddea and Jessore, with the Lieutenant-Governor's orders on them, were communicated to the newspapers on the 23rd instant, and the report of the Collector of Hooghly was sent for publication from Hooghly after the Lieutenant-Governor had conferred there with Mr. Hare, who had visited portions of the flooded tracts. Sir Rivers Thompson now desires to record the substance of the reports which have reached him from all parts of Bengal, the results of his own observations in the area which he has personally seen, and the general conclusions which the facts now before him appear to warrant.

2. The area affected by floods throughout Bengal may be roughly estimated at from 3,500 to 4,000 square miles. In the Presidency Division the flooded portion of Jessore comprises about 400 square miles of country; in Nuddea 1,000 square miles have been inundated; and in Murshedabad the floods have covered 1,250 square miles. A report received to-day states that the flood-water which covered the Bongong sub-division of Jessore is now finding its way to the sea through the Ichamati and Betua rivers, and is beginning to inundate an area of uncertain extent in the Satkhira sub-division of Khoolna. In the Burdwan Division the flooded area is stated to be about 50 square miles in the riparian tract to the north of Culna, 170 square miles in the Ghattal sub-division of Midnapore, 200 square miles in Hooghly, and 300 in Howrah. In the Bhagulpore Division about 100 square miles in the south of Maldah have been more or less affected by the overflow of the Ganges, besides small areas on river banks in the Bhagulpore and Monghyr districts, and in the Rajmehal sub-division of the Sonthal Pergunnahs.

3. Of these various tracts the Lieutenant-Governor has at present seen only a comparatively small portion—the riparian country of Hooghly and Burdwan bordering on the river Hooghly, and the eastern portion of Nuddea district between Navadwip or old Nuddea and Kishnaghur. Over the greater part of this area the *amun* rice has probably been destroyed, but this is not the chief food-crop of the country, which consists to a great extent of *aus* rice and various cold-weather crops grown on *chur* lands. *Amun* rice is confined to the higher lands and stiffer soils which have either escaped inundation altogether, or have not been submerged long enough for the crop to be materially injured. Of the *aus* rice a certain proportion, varying according to local conditions and the comparative forwardness of the crop in different places, is known to have been saved. In many places, however, there is reason to fear that the whole of the *aus* rice must have been lost. Thus in the village of Gosaincharra on the east bank of the Hooghly, visited by the Lieutenant-Governor on the 25th September, all the lands were under water except the village site itself, from which the waters had only recently retired. Many of the houses had been injured and some had fallen down, and the people had removed their families, cattle and valuables to the high villages on the western bank. On his way back from the village the Lieutenant-Governor met several boats full of persons returning to their homes with their cattle and household

goods. Here the whole of the *aus* had been overtopped by the water, while it was still unripe, and the small quantity which the people had contrived to save was rotten and unfit for consumption by men or cattle. As the people do not grow *amun* rice, the crop they had lost was the sole supply of food they had to depend upon until their cold-weather harvests. They were bearing their misfortunes with cheerfulness worthy of all praise, and their behaviour showed a determination to make the best use of all the resources at their disposal. The measures taken by them to provide for the safety of their families have already been mentioned, and it should be added that, owing to the gradual rise of the waters, no lives were lost in carrying these out. Their stock of food was stated to be sufficient for their immediate wants, and they either had in hand, or were in a position to procure, enough seed to sow a cold-weather crop on the whole area under water. In ordinary years *kulai* would be sown on these lands early in October, and would be harvested in December; but though the waters are falling rapidly, it seemed doubtful in this particular locality whether the river would sink rapidly enough this year to allow *kulai* to be sown, and the ryots expected to have to wait for wheat, barley, peas, and various vegetable crops which are sown later on, and harvested in March and April. Even the prospect of this long delay did not appear to alarm them. They observed to the Lieutenant-Governor that the floods would leave behind an unusually heavy deposit of silt, and that the crops of the next and the few following years would be specially abundant. No signs of distress from scarcity of food were visible, and although the people had been temporarily flooded out of their homes, none of them asked for alms. They seemed to be fully prepared to depend upon their own resources to accept the loss they had sustained, and to set to work vigorously to repair their houses and to cultivate their lands as soon as the subsidence of the water permitted them to do so. Owing to the prompt action taken by the people themselves, and to the fact that plenty of boats were available, very few cattle appear to have been lost. There may, however, be some difficulty hereafter in obtaining fodder, as most of the straw has been destroyed.

4. On the western bank of the Hooghly near the large boat-building village of Balagurh, the flood had not penetrated far into the interior. The village sites had been about a foot under water, and more than a thousand houses in the riparian villages, including the police station and post-office, had tumbled down. One woman had been killed by the fall of her house. Here *amun* rice is the chief crop, and the zemindar of Balagurh, who had an interview with the Lieutenant-Governor, assured him that the outturn promised to be a fair one. From Balagurh up to Culna the state of things on both banks is much the same. Stretches of *chur* alternate with high land, and the flood-water has spread out to one side or the other according to the level of the country. The condition of Gosaincharra, described in detail above, may be taken as typical of the *chur* villages, while the higher villages have escaped with about the same amount of damage as Balagurh.

5. At Culna the Lieutenant-Governor received a Deputation of the Municipal Commissioners and the Superintendent of the Burdwan Estates in that neighbourhood. This property comprises extensive *churs* lying on the west bank of the Hooghly to the north of Culna. The whole of these have been flooded, most of the houses have been destroyed, and nearly the whole of the *aus* crop has been lost. In Culna itself many houses have fallen down, and great damage has been done to the local roads. The ryots of the Burdwan estate *churs* are said to be already returning to their villages and preparing to rebuild their houses, and with the fall of the waters to get their lands ready for the cold-weather crop. Under the Lieutenant-Governor's orders, small charitable grants for the rebuilding of houses will be given by the Managers of the Burdwan Raj. The villages, it is true, are let in *patni*, and the Raj has no direct connection with them; but this fact cannot be held to relieve the parent estate, which has derived enormous profits from the *patni* system from the obligation to help the cultivators in a great natural calamity. The Municipal Commissioners also propose to raise a local subscription to assist people in rebuilding their houses; and in any case the extensive repairs to be undertaken on the roads within the town will provide employment for the poorer classes in the neighbourhood.

6. From Culna to Kishnaghur along the Hooghly and Jellinghi the *clurs* have everywhere been inundated, and in many places the flood has spread some distance into the interior of the country. Long stretches of high land have however escaped, and on these is stacked the *aus* rice which had been harvested before the flood, or which had ripened fully before it was submerged and had since been cut while standing in the water. On this question—the degree of injury done to standing rice by immersion in water—the Lieutenant-Governor has made careful enquiries from landowners and others at Kishnaghur, and has examined specimens of rice reaped while the crop was under water. From the data at present available, no very precise conclusion can be drawn as to the length of time for which rice can stand immersion; but it seems tolerably certain that if the crop is quite ripe before it is overtopped by the water, it may be reaped comparatively uninjured after an interval of several days. If an unripe crop is submerged, the whole rots and becomes perfectly uneatable. In the present case these facts are of considerable importance. Owing to the rains having set in much later than usual, the *aus* rice in many parts of the district was sown late, and its ripening may also have been to some extent delayed by the heavy and continuous rain of July and August. Consequently when the floods came, a considerable proportion of the crop submerged was unripe and rotted under water. Where, however, the *aus* had had time to ripen before the flood overtopped it, there is reason to believe that much of it may have been saved.

7. On the morning of the 27th September a conference was held on board the *Rhotas*, at which the Commissioner of the Presidency Division, the Collector of Nuddea, and the subdivisional officers of Meherpore and Ranaghat, were present. The Collector of Nuddea explained in full detail the extent of the floods so far as known at present. It appears that in the “northern tract” of inundated country described in paragraph 2 of the Government letter No. 1976—236 of the 22nd September to the Commissioner of the Presidency Division as comprising the subdivisions of Kushtea and Choodanga and the north-eastern portion of Meherpore, no serious damage has been done. In this part of the country three-fourths of the rice grown is *aus*, and only a quarter *aman*. The proportion of *aus* saved in the part of Meherpore east of the Bhoirub river is estimated by Mr. Melitus (and his view is confirmed from independent sources) at from twelve to thirteen annas, and the probable outturn of the *aman* at from eight to ten annas, while the prospects of the cold-weather crops are expressed as sixteen annas everywhere. It may be assumed that this estimate will hold good for the whole of Kushtea and Choodanga subdivisions except thana Coomercolly. The southern tract referred to in the letter quoted above can now be defined more precisely. It includes about one-third thana Kurempore, two-thirds Tehatta, the whole of Kaligunge, Nakasipara, Chupra, Hanskhali, and parts of Kishnaghur, Kissengunge, and Aranghatta. Within this area again it is necessary to distinguish a central zone consisting of thanas Tehatta Chupra Hanskhali, and parts of Kissengunge and Aranghatta, which is not subject to periodical inundation, and where, therefore, the present calamity has been more severely felt than in the riverain tracts of Kaligunge, Nakasipara, and Kishnaghur. This latter country is more or less flooded every year, and, provided the floods do not occur early enough to swamp the *aus* rice, the cultivators look upon the visitation as an important fertilising process, which secures them a rich cold-weather crop. In respect of the whole southern area, no precise estimate of the destruction of crop can be formed until Mr. Melitus has completed his enquiries.

8. The general character of the measures adopted to meet the present emergency is indicated in paragraphs 5 and 6 of the Government letter of the 22nd September. The facts laid before the Lieutenant-Governor at the conference were not such as to call for any important modification of those orders. No immediate distress from scarcity of food is apprehended in any quarter, and the funds in the Collector's hands are sufficient to enable him to deal with any cases which may come to his notice. The wants of the cultivators will be provided for by advances under the Agriculturists' Loans Act. The allotment to Nuddea under this head has been raised from Rs. 10,000 sanctioned in the Government letter referred to above to Rs. 25,000, and special arrangements have been made to enable

Mr. Melitus to distribute these advances during his tour of enquiry through the central zone, where the inundation has been most severe. Advances will also be made by the regular district staff, which will be strengthened by the appointment of a Joint-Magistrate and of two additional Sub-Deputy Collectors. It is for the Collector to see that the best use is made of the agency at his disposal, and that all cases in which advances are asked for are disposed of in time to enable the money to be spent in preparing for the cold-weather crop. His attention should also be given to the question of the stocks of seed in the districts. It was suggested to the Lieutenant-Governor during his stay at Kishnaghur that it was doubtful whether the supply of *kalai* seed locally available would be sufficient to meet the demands of the cultivators in a year when an unusually large area is likely to be sown with this crop. If this possibility were intimated to the dealers, they would probably find no difficulty in importing as much seed as may be required.

9. For the class of landless day-labourers the road works already sanctioned will serve to provide employment till larger projects, which are under consideration, can be commenced. The works recommended by Mr. Melitus may be started at once, and an attempt should be made to give indirect assistance to this class by giving out loans for land improvement from the balance still in the Collector's hands.

10. The Lieutenant-Governor hopes that this scheme of operations, worked out on the spot in consultation with the local officers, will ensure the relief of all pressing distress, will enable the cultivators to recoup in some measure their loss of crop, and will furnish the landless labourers of the area affected with the work they require to take the place of the harvest employment which would have been available in ordinary years. Even then, however, there will still remain much discomfort and hardship caused by the wholesale destruction of houses resulting from the floods. Financial considerations absolutely preclude the State from attempting to alleviate this form of distress, which can most properly be dealt with by private charity. In many places subscriptions have been raised locally for this purpose, and the Lieutenant-Governor feels himself justified in calling upon the larger and wealthier public of Calcutta and of the province generally to give that assistance already offered by the deputation which waited upon him at Belvedere. Sir Rivers Thompson has therefore decided to appoint a Committee for the purpose of collecting subscriptions and organizing relief for those forms of distress and hardship with which a Government agency cannot adequately cope. Among these the rebuilding of houses occupies the most prominent place, but it may well be that the Committee will find on further enquiry other subjects upon which money may properly be expended. The difficulties of communication while on tour compel the Lieutenant-Governor to constitute the Committee provisionally without formally inviting the co-operation of the individual members. Sir Rivers Thompson hopes, however, that the following gentlemen will consent to serve as members of the Committee, and will add to their number from time to time any persons who are in a position to promote the objects in view.

PRESIDENT:

Hon'ble H. A. Cockerell, C.S.I.

**FEE LEVIED FROM MAHOMEDAN PILGRIMS AT JEDDAH
FOR A TRAVELLING PASS.**

No. 11—259, dated Simla, the 31st August 1885.

From—F. C. DAUKES, Esq., c.s., Under-Secy. to the Govt. of India, Home Dept.,
To—The Chief Secretary to the Government of Bengal, Political Department.

I AM directed to forward the accompanying copy of a despatch from Her Majesty's No. 73 (Statistics and Commerce), Secretary of State for India, and enclosures, relative to an increase recently made in the charge levied upon British Indian pilgrims on landing at Jeddah for a Turkish pass to enable them to travel in the interior.

2. I am to request that the fact that the charge has been increased may, with the permission of His Honor the Lieutenant-Governor, be notified for the information of intending pilgrims.

No. 72 (Statistics and Commerce), dated India Office, London, the 16th July 1885.

From—Her Majesty's Secretary of State for India,
To—His Excellency the Right Hon'ble the Governor-General of India in Council.

I FORWARD herewith, for your information, a copy of a letter from the Foreign Office, with enclosure, and of the reply thereto, relative to a recent increase in the charge levied upon British Indian pilgrims on landing in Turkey for a pass to enable them to travel in the interior.

Dated Foreign Office, the 1st July 1885.

From—T. V. LISTER, Esq.,
To—The Under-Secretary of State for India.

I AM directed by the Marquis of Salisbury to transmit to you, to be laid before the Secretary of State for India in Council, for such observations as His Lordship may have to offer thereupon, a despatch from Her Majesty's representative at Constantinople relative to a recent increase in the charge levied upon British Indian pilgrims on landing in Turkey for a pass to enable them to travel in the interior.

The return of this paper is requested together with your reply.

No. 82 (Commercial), dated Therapia, the 22nd June 1885.

From—SIR W. A. WHITE,
To—EARL GRANVILLE, K.G.

I HAVE received a despatch from Her Majesty's Consul at Jeddah reporting that the charge of eight piastres, which has hitherto been levied from British Indian pilgrims on landing for a Turkish pass, for travelling in the interior, has been increased to fifteen piastres.

Mr Jago states that he refused his official co-operation to this measure, but that ultimately, on the recent arrival of a large number of pilgrims, he consented, under pressure from the authorities, to allow the fifteen piastres to be deposited by the pilgrim brokers in Her Majesty's Consulate pending instructions from Her Majesty's Embassy.

On making enquiries on this subject at the Sublime Porte, I was informed that the charge of a travelling pass in the interior was in fact formerly eight piastres; but that, in consequence of a decision come to last year by the Council of State and the Council of Ministers, and sanctioned by Imperial Trade, the fee in question was increased to fifteen piastres.

This measure came into force at Constantinople on the 1st November last, and three months earlier in the provinces.

I would venture to point out to Your Lordship that this measure has been applied since that date to travellers of all nationalities in the Ottoman Empire, without, as far as I am aware, giving rise to any objections on their part entirely distinct from the Passport Regulations which, as Your Lordship is aware, are at present undergoing certain important modifications in the sense desired by Her Majesty's Government.

Under these circumstances, I fail to perceive on what grounds Her Majesty's Consul at Jeddah can advise the British Indian pilgrims to refuse to submit themselves to the payment of the increased fee.

I should, however, be glad to be informed of the view taken of this question by Her Majesty's Government in order that I may be enabled to furnish Mr. Jago with the necessary instructions.

No. 1125, dated 15th July 1885.

From—J. A. GOBLEY, Esq., Under-Secretary of State for India,
To—The Under-Secretary of State for Foreign Affairs.

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter, dated the 1st instant, relative to a recent increase in the charge levied upon British Indian pilgrims on landing in Turkey for a pass to enable them to travel in the interior.

In reply, I am to state that, as this measure applies generally to travellers of any nationality in all parts of the Turkish dominions, Lord Randolph Churchill does not apprehend that any sufficient ground exists for a protest by Her Majesty's Government in reference thereto.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 26th September 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BUCKHAW DIV.	1 Burdwan, Sept. 26 '85	2.07	Weather—seasonable. Prospects of crops good everywhere except in certain inundated tracts. Price of rice 11½ to 15½ seers per rupee.
	Culna ...	2.33	
	Cutwa ...	1.75	
	Raneegunge ...	5.49	
	2 Bankoora, " 26 "	2.78	Weather—seasonable. Prospects of crops continue favourable. <i>Bhadai ti</i> is being reaped in thana Raipur with fair outturn. General health good.
	3 Beerbhoom, " 26 "	5.46	Weather—cloudy and showery. Fine weather wanted for rice crops. Prospects satisfactory except where floods have done some damage. Prices of food-grains still high. Cholera somewhat abated.
	Rampore Haut ...	3.78	
	4 Midnapore, " 26 "	4.22	Weather—cyclonic early in the week with heavy rain. In the Ghatal sub-division <i>amun</i> will not exceed 7 annas; it will fall below this in Pancoora thana and Moira outpost; elsewhere a crop varying from 10 to 16 annas is expected. Fever, as usual, is prevalent at this time of the year.
PRESIDENCY DIV.	5 Hooghly, " 26 "	0.97	Weather—sunshiny. Crops promise well where not flooded. Present weather favourable to crops. Prospects of <i>amun</i> in the Sudder and Serampore sub-divisions good on the whole.
	Serampore ...	1.09	
	Howrah, " 28 "	1.71	Weather—stormy on 22nd and 23rd; hot and cloudy the rest of the week. As formerly reported, much of the <i>amun</i> crop with sugarcane, jute and vegetables destroyed by the floods. What is left doing well. Water being preserved for <i>boro</i> paddy. Health good.
	Oolooberiah ...	2.88	
	<i>Central Districts.</i>		
	6 24-Pergha, Sept. 28 '85	1.73	Weather—seasonable. The prospects of the crops in the Sudder, Diamond Harbour Barrackpur and Dum-Dum sub-divisions are good, though in parts of thanas Atchipur and Bisotpur in the Sudder, and Bankipur and Devipur in the Diamond Harbour sub-division, the <i>amun</i> in the lower lands has suffered to some extent from excess of rain water. In Baraset and Bussirhat the northern and eastern portions have been swept over by the waters from the Bongong floods and a sudden rise of the Ichamatti river, and the <i>amun</i> crop has been entirely destroyed. Public health on the whole normal.
	7 Nuddea, " 26 "	2.22	Weather—seasonable; showery. Prospects appear daily improving. Damage done by inundation is chiefly confined to the Sudder sub-division and thana Tehatta in Meherpur. In 70 villages in the Ranaghat sub-division damage has been done to <i>amun</i> ; <i>amun</i> is reported to have escaped. Health fair.
	Kushtia ...	0.94	
	Meherpur ...	2.09	
	8 Khoolna, " 26 "	6.83	Weather—storms on 22nd and 23rd, since then fine. Except in the northern thanas of Satkhira, prospects of the <i>amun</i> rice crop are very good, and the yield of <i>amun</i> paddy is satisfactory. The rivers rose to a great height on 23rd, but since then have subsided. Fever prevalent.
RAJSHAHY DIV.	9 Jessore, " 26 "	2.09	Weather—dry in the latter part of the week. <i>Amun</i> has been destroyed over a greater part of the Bongong sub-division by the flood. In other sub-divisions it has been partially damaged. Prospects on the whole fair. Fever continues.
	Jhenida ...	1.07	
	Magoora ...	1.64	
	Narail ...	1.39	
	Bongong ...	2.59	
	10 Moorsheadabad, " 26 "	3.94	Weather—stormy and unsettled. Brighter weather wanted for all crops. <i>Amun</i> on the high lands of the Barh is doing well. <i>Kalai</i> sowings have commenced on the dearah and other lands that were flooded. Public health good. Price of common rice varies from 10 to 12½ seers per rupee.
	Lalbagh ...	3.76	
	Kandi ...	5.71	
	Jungipore ...	1.68	
	11 Dinapore, Sept. 25 "	7.06	Rain all over the district. Harvesting of jute and <i>amun</i> nearly finished. Cultivation of <i>amun</i> going on. Rice selling at from 12 to 19 seers per rupee.
	12 Rajshahya, " 26 "	3.98	Weather—cloudy and rainy. Heavy rain at Nowgong. Harvesting of <i>amun</i> paddy continues; outturn for Nattore estimated at 8 annas. Very little improvement in price of rice as yet. Prospects of <i>amun</i> paddy, sugarcane, jute, &c, generally fair. <i>Gauja</i> seedlings being transplanted in Nowgong. Fever general.
	Nattore ...	2.03	
	Nowgong ...	12.13	
RAJSHAHY DIV.	13 Rungpore, " 26 "	4.96	Weather—rainy. Transplanting of <i>amun</i> has nearly come to an end. Prospects of the crop continue good. Other standing crops doing well. The outturn of jute will be below the average. Sugarcane has been damaged by excessive moisture. Fever and bowel-complaints still prevalent in the station; otherwise public health good.
	Nilphamari ...	4.96	
	Gwibanda ...	0.71	
	Kurigram ...	0.78	
	14 Bogra, " 26 "	4.33	Weather—latter end of the week very wet. Cool. Prospects of winter crops very good. Public health fair.
	15 Pubna, " 26 "	3.85	Weather—cloudy and rainy. Crops in Serajgunge all good. Some loss of crops in the low lands in Pubna, but general prospects good. River falling rapidly. A good deal of fever about, especially at Serajgunge.
	16 Darjeeling, " 26 "	13.21	Weather—fine after very heavy rain. Prospects of all crops good.
	17 Julpigoree, " 26 "	7.98	Weather—cloudy with occasional showers. Copious rain on 24th. Transplanting of <i>amun</i> completed. Prospects of crops good. Cattle-disease continues at Fallacotta. Public health fair.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>continued</i>			
<i>Eastern Districts.</i>			
Dacca Division.	18 Dacca, Sept. 26 '85	1-00	Weather—seasonable. Harvesting of <i>aus</i> rice nearly completed and that of <i>jute</i> going on. Floods subsiding. Prospects of <i>aman</i> good. Public health good.
	Manickgunge ...	2-11	
	Munshigunge ...	6-38	
	Narainigunge ...	7-67	Weather—seasonable. Prospects of crops good. Public health good.
	19 Furreedpore, " 26 "	1-85	
	Madaripore ...	1-06	Weather—hot. Sufficient rain with occasional high wind. The constant rain has caused some slight damage to the harvested <i>aus</i> paddy. The new plants of <i>aman</i> paddy also have been slightly damaged; but there is promise of a good crop. General health good.
	20 Backergunge, " 24 "	4-34	
	Mymensingh, " 25 "	2-54	
	Jamalpur ...	1-95	Heavy rain general and high floods in the south-eastern part of the district; rivers now falling. Crops in low lands damaged by inundation. General prospects good.
	Kishoregunge ...	2-34	
	Attia ...	4-55	
CHITTAGONG DIV.	Netrokona ...	7-69	Weather—seasonable. Prospects of crops generally fair. Transplanting of <i>aman</i> finished. Prices rising. Public health generally fair.
	22 Chittagong Sept. 29 '85	0-28	
	Noakhully, " 25 "	0-22	
	Fenny ...	2-15	Weather—first day of the week slightly rainy and cloudy and since then it is clear and sunny. Harvesting of <i>aus</i> crop completed except in the islands; outturn about twelve annas. Transplanting of <i>aman</i> almost over. Fair weather has done good to the standing crops. General health good.
	24 Tipperah, " 24 "	7-05	
	Brahmanbariah ...	3-80	
	Chandpore ...	4-20	A break in the rains, fine weather, intensely hot. Late rice generally a very promising crop, but, over a limited tract, has suffered from the heavy rain of July. In that tract there is some distress, regarding which enquiries are in progress. Some damage, too, has been done in the north of the district by floods.
	25 Chittagong Hill, " 22 "	3-25	
	Tracts.		
	Hill Tipperah, " 23 "	3-98	Weather—cloudy and rainy during the latter part of the week. Foggy on the morning of the 10th and 20th. Harvesting of <i>joom</i> paddy in full swing. Prospects of sugarcane and cotton good.
BEHAR.			
PATNA DIV.	26 Patna, Sept. 26 '85	5-46	Weather—heavy squalls with wind and rain daily; getting much cooler with signs of cold weather in morning and evening. <i>Bhadai</i> harvest has commenced. Prospects of paddy continue fair. Public health good.
	27 Gya, " 26 "	1-78	Weather—mostly cloudy. Prospects of <i>khurif</i> excellent. Some cases of cholera and fever reported in the Nawada sub-division. Health generally good. Prices slightly easier everywhere.
	28 Shahabad, " 26 "	2-97	Weather—rainy with high west winds in the beginning of the week; latterly cloudy and fair at intervals. Harvesting of <i>bhadai</i> finished. Prospects of winter rice excellent. Cholera and fever reported from the Bhabuah sub-division, and fever and cattle-disease from Sasseram. Prices stationary.
	Buxar ...	3-63	
	Sasseram ...	3-15	
	Bhabhua ...	0-32	Heavy and almost continuous rain on 23rd and 24th accompanied with strong easterly winds. Harvesting of <i>bhadai</i> nearly completed. Prospects of rice very favourable except in tracts affected by the late floods. Transplanting of tobacco seedlings has begun in places. Price of <i>makai</i> falling. A few cases of cholera reported from the Madhubani sub-division, otherwise public health good.
	29 Durhanga, " 26 "	5-71	
	Tajpur ...	1-66	
	Madhubani ...	1-5	Weather—cloudy. There was an unusually heavy rainfall with strong wind on the 23rd instant, which has damaged the <i>bhadai</i> crops to a certain extent. Paddy doing well. Cholera still prevails in the district causing great mortality.
	30 Mozufferpore, " 26 "	5-50	
	Hajipur ...	4-16	
BRASSLAVAN DIV.	Sitanarhi ...	6-21	Weather—cloudy with heavy showers in the beginning of the week; fair towards the latter end of it. <i>Bhadai</i> crops (where not injured by excessive rain) are being harvested with fair results. Prospects of paddy continue good. Manufacture of indigo going on, but owing to excessive rain the outturn is poor. Sporadic cases of cholera and fever still reported, but on the whole general health is fairly good.
	31 Sarun, " 26 "	7-41	
	Sewan ...	5-67	
	Gopalgunge ...	1-93	Weather—cloudy with heavy showers. Excessive rain has done much damage to the <i>makai</i> and other <i>bhadai</i> crops. Prospects of paddy continue excellent. Prices stationary. Cholera has abated; some cases of fever reported.
	32 Champaran, " 26 "	5-51	
	Monghyr, Sept. 26 '85	3-15	
	Begusarai ...	3-42	Strong east winds on 22nd and 23rd, showers till 25th, since which no rain. <i>Bhadai</i> has been reaped; about an 8-anna crop has been secured. Prospects of <i>aghani</i> continue very good. Public health fair. Prices falling slightly.
	33 Bhagulpore, " 26 "	1-27	
	Banks ...	1-64	
	Muddehporeah ...	1-91	Weather—first three days fine, since then cloudy with occasional rain. Prospects of winter rice very good. Floods have subsided, and <i>karkhi</i> and <i>kalai</i> are being largely sown. In the tracts lately flooded the labourers are reported to be getting work. A great deal of cholera still about in many parts of the district, especially Banks, Peerpointee, and Hongong. Price of rice 10 seers per rupee at Bhagulpur, elsewhere 11 to 13½ seers.
	34 Soolpore ...	4-74	
	Parneah, " 26 "	3-56	
BRASSLAVAN DIV.	Kissengunge ...	10-11	Weather—fine after storms of 22nd to 24th. Crops where planted and not destroyed are fair. Much fever. Rivers falling. Very heavy rain general on 23rd. 8-61 at Kissengunge on 24th not included in column 2.
	Arrareah ...	3-70	
	35 Maldah, " 26 "	10-12	
	Chanchal ...	7-38	Weather—clear, cloudy and sunny alternately. Prospects of winter rice excellent. <i>Kalai</i> sowings progressing. Common rice selling at 13 seers per rupee and the new crop at 16 seers at Englishbazar. General health good.
	36 Gazole ...	0-66	
	Shibgunge ...	10-52	
	37 Sonthal Pergna, " 26 "	3-63	Strong cyclonic SSE winds with heavy rain for three days, and then cloudy with heavy showers. <i>Janera</i> harvest nearly over; best outturn in Godda with a 10-anna crop; in other parts outturn 4 to 8 annas. Paddy everywhere doing well. In Rajmehal and Pakour floods have subsided and lands are being sown with <i>rubber</i> crops. General health good.
	Rajmehal ...	5-06	
	Jamtara ...	3-89	
	Pakour ...	1-03	
		1-55	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack, Sept. 25 '85	5.05	Weather—cloudy at times. Reaping of <i>basli</i> continues. <i>Sarad</i> growing well. Common rice is selling at 12 seers per rupee in town. Cyclone of the 22nd greatly damaged the houses, trees, and crops in almost every part of the district. Storm-waves destroyed crops, cattle, and villages along the sea-coast.
	39 Pooree, „ 24 „	2.70	Weather—cyclonic. Hot and cloudy with strong gales and rain from 6 P.M. on the 21st, blowing hard from the north and the west, and ending from the south at 3 P.M. on the 22nd. Out-houses, fences, and gardens have been damaged. The crops have been much benefited by the recent rain. The <i>sarad</i> paddy bordering the Chilka is doing very badly owing to drought. Common rice is selling at an average of 16 seers 11 chittacks per rupee in the Sudder sub-division, and 17 seers 10 chittacks in the Khoorda sub-division. Public health good.
	40 Balasore, „ 25 „	6.45	Weather—stormy with heavy rain throughout the district. A cyclone of great extent, but weak power, affected the whole district on the 22nd. The wind did no mischief to trees or houses save in the extreme south. The rivers rose very high, and floods were out in most parts of the district. These are fast draining off as is usual in Balasore after doing good to rice on high land, and no harm to rice elsewhere so far as has been heard. A small storm-wave was kept out of cultivated lands by bank of the coast canal. It drowned many cattle, and has hurt the small quantity of rice grown on the sea-shore outside the protection of the canal embankment.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh, Sept. 25 '85	2.45	Weather—seasonable. Good rain reported from all parts of the district. <i>Bhadoi</i> being harvested; outturn somewhat below average. Rice crops promise well; other crops also doing well. Cholera abating, but still prevalent in parts of the district. A few cases of small-pox also reported.
42	Lohardugga, „ 26 „	3.65	Weather—seasonable. Recent rain has ensured at least an average rice crop all over the district. Prices very steady. No cattle-disease; but cholera still prevails in Ranchi town and neighbourhood.
43	Singbhoom, „ 25 „	1.25	Weather—seasonable. Nothing could be better for the crops than the present weather. Reports received show the crops to be excellent everywhere. Prices easy, and general health good.
44	Manbhoom, „ 26 „	3.73	Weather—alternately stormy and fine. Reaping of <i>bhadoi</i> crops continues. Prospects of winter crops excellent. Common rice is selling at 12 seers per rupee in the ruralia market. Public health good.
	Goviendpore „	4.26

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, S. G.'s Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ...

The total fall of rain from 20th to 26th September 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The total fall from 1st January to 26th September 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newmann's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, Δ dew, Δ lightning, t thunder.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 29th September 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 25TH OF SEPTEMBER 1885.

The principal feature in the meteorology of the week has been the formation of a rather small, but decidedly severe, cyclone in the Bay, and its subsequent passage inland through Orissa and Chutia Nagpur into North Behar and perhaps into the North-West Provinces.

The week ending the 18th instant had been characterised by comparatively light rainfall over the greater part of the Province, and very light and somewhat irregular winds were blowing during that time over the land area. At the same time, however, strong monsoon winds were blowing in the south of the Bay, the average wind velocity at Galle having been for some days 10 miles an hour and upwards, which indicated a fairly strong monsoon current advancing up the Bay. In the centre of the Bay also at the close of the week winds were comparatively light and of fairly normal direction, except at the Arakan stations, where winds were irregular and in some cases easterly, but on Saturday, the 19th, winds at Akyab and Diamond Island became north-easterly, and wind velocity at the latter station commenced to increase, and at 10 A.M. on this morning a velocity of 22 miles an hour was reported. Pressure also commenced to fall rather rapidly at Diamond Island and Negapatam, and it is probable that on this day the cyclone had commenced to form, the centre, so far as can at present be judged, being probably to the west of the Andaman Islands. On the 20th the indications that stormy weather or a small cyclone had formed in the Bay were more marked, pressure fell moderately at Madras and along the Arakan coast, while wind became south-easterly at Diamond Island and strengthened considerably, the hourly wind velocity for the 24 hours becoming 25 miles, with a velocity at 10 A.M. of 24 miles. Winds also commenced to strengthen at Galle. On this day probably the storm had distinctly formed, and its centre was to the west or perhaps south-west of Diamond Island and towards the centre of the Bay. On the morning of the 21st the indications showed that the storm was advancing in a north-westerly direction, for pressure was rising rapidly at Diamond Island and wind velocity was moderating, while at Akyab wind had become south-easterly. Wind directions along the west coast also altered, and on this day, from the light south-easterly winds which were previously blowing, they became north-easterly and northerly at all stations from Dacca down to Coconada. Pressure fell rather rapidly at Masulipatam and less rapidly at False Point, and the indications at this time were by no means clear as to which part of the coast the storm would reach. The 4 P.M. observations of the stations at the head of the Bay and along the west coast, which were called for, and some of which were not received until midnight, shewed clearly that the storm was approaching the west coast to the south of False Point, and orders were issued shortly after midnight to hoist the storm signals at the stations in the river, warning the shipping that a cyclonic storm would cross the coast to the south of a line joining Chittagong and False Point. The exact position of the centre of the storm at 10 A.M. of the 21st is a little doubtful, but it was probably in about latitude 17° or 18° and longitude 87° or 88° , and it must have been advancing with very great rapidity in a north-westerly direction; for on the morning of the 22nd, so far as can be judged from the observations which have been received at present, its centre was a little distance to the south of False Point, whence it advanced inland, the centre passing near Cuttack and thence through Chutia Nagpur, and on the morning of the 23rd the centre of the storm was apparently not very far from Dehree in South Behar, and probably a little to the south of that station. This represents a movement of about 350 miles in the 24 hours from 10 A.M. on the 22nd to 10 A.M. on the 23rd. On the morning of the 24th the storm had again moved in a northerly direction, and it was probably to the west or south-west of Motihari in North Behar. It was on this day, however, comparatively feeble, and though winds were still cyclonic in direction, the barometric depression had to a great extent filled up. With the advance of the storm to the north of False Point, a second signal was hoisted at the stations in the river, showing that the storm was passing to the north of False Point; and on the morning of the 23rd, as the storm had advanced well inland, the storm signals were lowered.

The barometric depression accompanying the advance of the small cyclone was very considerable, and though no observations have yet come to hand, which will show the pressure at the centre of the small cyclone, either while it was in the Bay or inland, yet the observations at Cuttack on the morning of the 22nd shewed there had been a fall of the barometer of 0.539" during the previous 24 hours, and the pressure recorded was only 29.23". As the centre at this time was certainly some little distance from this station, it will be probably safe to infer that the actual pressure at the centre of the storm was not much, if at all, above 29 inches. This is a very low pressure, and it may be looked on as a measure of the intensity of the storm, and if other evidence were wanting, it would prove that the cyclone, though in reality a small one, was very fierce and intense. The changes of pressure with the advance of the storm were very rapid, and by 10 o'clock in the evening of the 22nd pressure at Cuttack had risen almost half an inch. It is much to be regretted that during the early part of the night of the 21st an interruption in the telegraphic communication with False Point took place, and thus no details were at that time, or even are at present, obtainable as to the passage of the storm near this station.

The winds accompanying the small cyclone were undoubtedly very fierce, and the last telegram received from False Point at 10 P.M. on the 21st shewed that the wind velocity was 38 miles per hour. The observations, too, which were taken at Saugor Island on the 22nd, shewed that at 4 P.M. on that day wind velocity was 68 miles per hour, and at 10 P.M. the velocity was 58 miles per hour, while the velocity for the 24 hours from the 21st to the 22nd averaged 30 miles per hour. Saugor Island, too, it will be seen, was at a very considerable distance from the centre of the storm, in all probability the centre of the storm never being nearer than from 120 to 150 miles from that station.

The rainfall which accompanied the small cyclone near its centre, though undoubtedly very heavy, does not appear to have been quite as heavy as is usually the case with such a violent storm. Up to the present time the heaviest rainfalls in the actual path of the storm, of which reports have been received, are on the 22nd instant in the Cuttack district—Dharmasalla 9·20 inches, Jagatsingpore 6·11 inches, Kendrapara 5·50 inches, Jajpore 5 inches (about) and Cuttack 4·67 inches; and in the Balasore district—Bhuddruck 5·40 inches and Balasore 4·15 inches, but of course with the advance of the storm a strong inrush of moist southerly winds set in over the whole Province, bringing rather heavy rainfall to all stations, and from the 22nd or 23rd up to the close of the week, moderate to heavy rain fell in all districts, and in North Bengal and North Behar in particular the rainfall became exceedingly heavy.

The variations of pressure during the week have of course been mainly dependent on the small cyclone during its formation and movement through the Province, and as the western districts only were affected by this storm, these districts only show comparatively low pressure and the eastern districts comparatively high pressure. Thus the average pressure for the week at Cuttack is 0·04" below the normal; at Gya the average pressure is nearly normal, while on the other hand at Dacca pressure for the week has been 0·09" in excess of the normal.

With the very heavy rainfall which has occurred during the week, temperature has been in most instances lower than the normal, and the average temperature in each district is below the normal by amounts which vary from a defect of 2° in North Behar to a defect of 0·5° in East Bengal. The largest defect at any individual station is at Berhampore, where it equals 2·8°.

As has before been explained, the rainfall for the week has been heavy in all districts, except East Bengal. The districts receiving the heaviest falls are North Behar, North Bengal and Orissa, while also Chutia Nagpur, South Behar and South-West Bengal received comparatively large amounts of rain. Thus in North Behar for the week the rainfall has averaged 6·76 inches; while the normal fall for the week is only 1·86 inches, or the actual fall is between three and four times as large as the normal. In North Bengal the average rainfall recorded was 5·32 inches as against the normal amount of 1·55 inches, so that again the actual fall is between three and four times the normal quantity. Orissa has received an average fall of 4·75 inches, the normal fall being 2·38 inches, so that the actual is about twice the normal. Chutia Nagpur has received an average fall of 3·81 inches, while the normal fall is 1·70 inches, which is again more than twice the normal fall. South Behar has averaged 3·25 inches, while the normal fall is 1·55 inches, or the actual is decidedly more than twice the normal, and in South-West Bengal the rainfall has averaged 2·97 inches, while the normal fall is 2·15 inches, the excess fall in this district is therefore only 38 per cent. of the normal. In East Bengal, on the other hand, the actual average rainfall has only been 1·15 inches, while the normal fall is 3·04 inches, this district therefore shows a defective fall of 63 per cent.

In certain districts therefore the rainfall for the week has been particularly heavy, and prominent among the districts which have received falls very largely in excess are—in Orissa the Cuttack and Balasore districts; in South-West Bengal the Midnapore, Bancoorah, and Beerbhoom districts; in North Bengal the Pubna, Maldah, Dinagepur, Cooch Behar, and Darjeeling districts; and in North Behar the Purneah, Mozufferpore, Chumparun and Sarun districts.

The excessively heavy nature of the rainfall may also be seen by giving the stations which have received 7 inches of rain and upwards during the week. Thus in Orissa the following stations have received upwards of 7 inches:—Dharmasalla and probably Bhuddruck; in South-West Bengal the following stations Bishenpore Andra, Raipore, and Sonamukhi; in North Bengal Naogaon, Maldah, Gazol, Dinagepur, Julpigoree, Cooch Behar, Mickligunge, Siliguri, and Darjeeling; in North Behar Kalimpong, Kissengunge, Arrareah, Purneah, Sitamarhi, Paru, Fugaha, and Chupra; and in Chutia Nagpur Hazaribagh received more than 7 inches of rain in the week.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 25th of September 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.

"	26th	83.4	91.0	12.2	78.8	79.5	95.6	77.9	83

The mean temperature of the seven days 82.6

The extreme variation of temperature 14.6

The maximum temperature 91.2

The mean relative humidity 86%

The total fall of rain from 20th to 26th September 1885 1.85

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;

Calcutta, the 28th September 1885.

ALEXANDER PEDLER,

For Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE table annexed to this memoranda furnishes the following particulars in connection with the mortuary statistics of the districts in Bengal for the month of July 1885.

1. That 103,408 deaths were registered in these districts among a population of 66,163,884, representing a death-rate 18·72 per 1,000 per annum, against 18 per 1,000 during the preceding month, and 17·28 per 1,000 during the corresponding month of 1884, indicating, as compared with the last-named period, a large increase in the number of deaths recorded.

2. That the highest casualty rates were returned from the following districts :—

<i>Districts.</i>				<i>Districts.</i>			

MORTALITY ACCORDING TO—

Disease.

Sex.

MORTALITY ACCORDING TO—

DISTRICTS.		DEATHS AMONG—		CLASS.		RATIO PER 1,000 OF POPULATION PER ANNUM.		DEATHS.		AGE.												RATIO PER 1,000 OF POPULATION PER ANNUM.	

MEMORANDA.

THE annexed table, exhibiting the vital statistics of the principal Municipalities in Bengal for the week ending 12th September 1885, furnishes the following results :—

1. That during the week in question births and deaths were registered in the proportions, respectively, of 25·3 and 41·9 per 1,000 of population, as opposed to 28·1 and 42·4 per 1,000, respectively, during the preceding week ending 5th September, indicating a falling off in the record of both events, particularly of births.

2. That the undermentioned Municipalities returned the highest proportions of births and deaths :—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Bhagulpore	48·0	Chupra	77·1
Gya	41·7	Bhagulpore	71·5
Chupra	40·0	Gya	70·4
Patna	36·6	Patna	67·5
Mozufferpore	36·4	Monghyr	54·2
Serampore	35·4	Suburbs of Calcutta	50·0
Beaulah	34·2	Arrah	40·7
				Puri	37·8
				Mozufferpore	36·4
				Utterpara	35·4
				Burdwan	33·6

3. That the casualty rates from the principal diseases specified in the table above referred to, exhibit no noticeable variations in comparison with the death-rates from the same diseases in the preceding week :—

				Ratio per mille during the weeks ending—	
				12th September 1885.	5th September 1885.
Cholera	4·0	4·9
Small-pox	·03	·03
Fever	17·5	17·3
Bowel-complaints	7·8	7·9
Injury	·8	·4
Other causes	11·7	11·8

4. That while the casualties from small-pox and injury were nowhere notably large, the rest of the death-causes exhibited their greatest activity in the following Municipalities :—

Cholera.		Fever.		Bowel-complaints.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Chupra	27·3	Bhagulpore	29·9	Patna	15·9	Puri	25·2
Arrah	14·3	Patna	29·5	Bhagulpore	15·4	Gya	24·6
Monghyr	10·8	Monghyr	28·9	Chupra	13·7	Chupra	21·5
Bhagulpore	9·9	Gya	26·6	Mozufferpore	13·4	Patna	16·8
Gya	8·9	Arrah	21·6	Serampore	11·8	Suburbs of Calcutta	15·9
Patna	4·2			Suburbs of Calcutta	11·0	Bhagulpore	15·4

5. That the death-rates in relation to *Sex*, *Class* and *Age* were returned at the rates indicated below :—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	44·2	Christians	...	21·7	Under 1 year	...	360·1
Females	...	39·3	Hindus	...	44·9	1 and under 5 years	...	67·3
Ratio of male deaths to every 100 female deaths	...	127	Mahomedans	...	35·8	5 " 10 "	...	32·1
						10 " 15 "	...	25·8
						15 " 20 "	...	19·3
						20 " 30 "	...	25·5

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 28th September 1885.

MORTALITY ACCORDING TO—

MORTALITY ACCORDING TO—										Sex.	
Disease.										Ratio per 1,000 of population per annum.	
Deaths from—										Ratio of deaths per 1,000 of population per annum in the previous week.	
All causes.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Other diseases.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Injury.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Bowel-complaints.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Small-pox.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Cholera.										Ratio of deaths per 1,000 of population per annum in the previous week.	
Typhoid											

Official census of the Europeans in the Municipalities was recently taken as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives are, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans to, cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

XII. 1. Jute
Total	1,235	105	911	57	1,340	968	540	702

INCREASE.

Edible grain ... 323
This increase is due to high rate caused by the inundation in the Moorshedabad district by the breakage of the Bhagiruthi river embankment at Lalta Kooria.

DECREASE.

Piece-goods ... 57
This decrease is due to previous stock not being exhausted in consequence of the distress.
Seeds of all sorts ... 29
This decrease is due to previous stock not being exhausted in consequence of the distress.
Sundries ... 35
This decrease is due to previous stock not being exhausted in consequence of the distress.
Coal ... 566
This decrease is due to merchants not laying in stock, as the river is expected to be navigable throughout the year.

NALHATI, the 21st September 1885.

R. G. MOOKERJEE, Manager.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

RESOLUTION OF THE GOVERNMENT OF BENGAL IN THE REVENUE DEPARTMENT ON THE RECENT FLOODS IN BENGAL.

Dated "Rhotas," the 3rd October 1885.

IN the Resolution of the 29th September 1885, published in the *Calcutta Gazette* of the 30th idem, the Lieutenant-Governor noticed briefly the approximate area affected by floods in different districts of Bengal, and proceeded to review in fuller detail the prospects of the crops and the condition of the people in those parts of the country which had come under his personal observation during his tour through the districts of Hooghly, Burdwan, and the western parts of Nuddea. In paragraph 7 of that Resolution, it was observed that in the district of Nuddea the effects of the inundation had been especially severe throughout a central zone comprising thanas Tehatta, Chapra, Hanskhali, and parts of Kissengunge and Aranghatta. This tract of the country is traversed by the river Jellinghi, and the Lieutenant-Governor passed through the centre of it in his journey from Kishnaghur to Berhampore. All along the course of the Jellinghi, from its junction with the Bhagiratti at old Nuddea to the mouth of the Bhoirab near Madhupur, large areas of lowlying land were then under water, although the river had sunk three feet nine inches from its highest flood level. Here, as in the Hooghly, the spill of the flood waters had oscillated from bank to bank according to the levels of the country, and tracts of high land alternated with long sketches of flooded low lands. Thus in the north-east corner of thana Nekasipara, where the Kulmah khal joins the Jellinghi,

the floods extended to the west as far as the eye could reach, and the water appeared to have only lately receded from the village sites. A few miles higher up in the villages of Chanderghat, Koostea, and Hanspookooria, where the Lieutenant-Governor landed, he ascertained from the villagers that *kalai* had been sown on all the higher lands, and in some places the new crop was already visible above ground. In thana Tehatta, to which these villages belong, the *aus* is stated to form 11 annas and the *aman* 5 annas of the rice crop of the year. Of the *aus* about 6 annas have been saved, as the crop was fairly forward, while all of the *aman* except about 2 or 3 annas will probably be lost. To compensate them for this disaster, the ryots have the promise of an unusually abundant cold weather crop, and the fertilizing effect of the inundation will guarantee a plentiful yield of both rice and *rabi* for several years to come. So high indeed is the value set by the cultivators upon the layer of silt which the floods leave behind, that in both Nuddea and Moorshedabad the Lieutenant-Governor was informed by non-official gentlemen of wide local experience that cultivators had admitted in conversation that if they had to choose between a flood as extensive as the present one and no flood at all, they would prefer the former alternative, even with the loss it had caused.

2. In the Moorshedabad district the total area affected by the floods is roughly estimated at 1,250 square miles. Along the northern border of the district the Ganges floods, commencing early in August, inundated nearly the whole of the Jungipore sub-division and a tract of country extending from Bhugwangola to the junction of the Ganges with the Jellinghi. On the 23rd August the embankment on the right bank of the Bhagiratti, which is prolonged to Akrigunge, and thus in some measure protects the central portion of the district from the Ganges flood, burst at Lalitakuri, about 20 miles north of Moorshedabad. The flood water from this breach passed off to the south and south-east along the lines of the Gobra nadi and the Bhoirab river, inundating the entire tract of country between the Bhagiratti and the Sialmari nadi, down to the southern border of the district, whence the floods spread into Nuddea. Besides these main inundations, the spill from the western bank of the Bhagiratti extended to a portion of the Kandi sub-division on both banks of the Dwarka or Babla nadi, and a smaller area further west was flooded by the rising of the river Mor.

3. At a conference held at Berhampore on the 1st October, the Collector, who had been very active in his enquiries, and had visited nearly every part of the flooded area, explained to the Lieutenant-Governor the effect of the inundations on the different tracts of country comprised in Moorshedabad district. It appears that in the high undulating lands to the west of the Bhagiratti known locally as the Rarh, *aus* rice is not grown at all, and that the only cold weather crop is *surgujia* and similar oil-seeds planted in small quantities on high ridges. The staple food crop of this part of the district is a very fine variety of transplanted *aman* rice, which yields after husking the high proportion of 30 seers of rice to a maund of paddy. During the last two years the rainfall in the Rarh has been comparatively scanty, and the *aman* rice—a crop peculiarly dependent upon a plentiful supply of rain—has suffered greatly. The heavy rain of the present year, though flooding some low lands in Kandi and parts of the Rarh country in Jungipore, have on the whole done great good to the *aman* rice, of which an unusually large quantity is said to have been planted. Great benefits are also anticipated by the cultivators from the destruction of the caterpillars and other insects which did great damage to last year's *chaitali* crop. In the Bagri, or lowlying lands to the east of the Bhagiratti, the *aus* rice forms three-fourths and the *aman* barely one-fourth of the rice crop of the year. *Rabi* or *chaitali* crops are largely grown, and 12 annas of the total food supply of this part of the country is said to be derived from *kalai muny*, wheat, barley, and similar staples. Here, as in Hooghly and Nuddea, the proportion of the *aus* rice that has been lost varies greatly according to the elevation of the country and the comparative forwardness of the crop. Highlying villages, where the *aus* happened to be forward, may, it is said, have saved as much as 10 or 12 annas, while in other places where the plants were overtopped in an unripe state there has been a total loss.

4. In his journey up the Bhoirab to Islampore, and again in travelling across country from the latter place to Berhampore, the Lieutenant-Governor passed through the centre of the area flooded by the breach of the Lalitakuri embankment; and his impressions fully bear out the views expressed to him by the local officers. These may be summed up by saying that the disaster which has befallen the people of the affected districts, though causing much hardship and discomfort for the time being, has done little or no permanent harm to the cultivating classes, and in fact has ensured to them for the next few years crops far more abundant than those which they have lost. Landless day-labourers, however, and those cultivators who have been brought into a reduced state by the short crops of previous years, necessarily suffer more acutely, and it is on behalf of these classes that the Lieutenant-Governor has decided to undertake certain measures of State relief, and to appeal to private charity for the alleviation of those forms of distress with which the Government is unable to deal. Here it may be remarked that, owing either to the character of the soil from which the walls are made, or to more substantial modes of construction, the number of houses destroyed in Moorshedabad seems to have been considerably less than in Nuddea and Hooghly. On the other hand, there has been much loss of personal property, and it was represented to the Lieutenant-Governor by a deputation of the Moorshedabad Association that the State should undertake to distribute clothes on a large scale to persons in need of them. While altogether declining to admit any such obligation on behalf of Government, the Lieutenant-Governor wishes to draw attention to this matter as a very proper subject for private charity, and to take the present opportunity of acknowledging the liberal donation which Bissen Chand Dudhuria and Budh Singh Dudhuria, merchants of Azimgunge, have placed at the disposal of the Collector of Moorshedabad for expenditure on this purpose. It is also understood that the local Committee about to be formed at Berhampore to work in concert with the Calcutta Committee, appointed by the Resolution of the 29th September, will pay special attention to this form of distress.

5. The scheme of relief operations drawn up during the Lieutenant-Governor's visit does not differ materially from that sanctioned in Nuddea. From the beginning of the floods the Collector and sub-divisional officers have been distributing charitable relief in all cases where it was required, and their efforts in this direction appear to have prevented those isolated cases of death by starvation which might otherwise have occurred. The Government grant under this head has not yet been exhausted, and the Collector has some private subscriptions still in hand. He has been directed to watch the condition of the people carefully, and to ask for a further allotment directly he has reason to believe that it is likely to be required. Mr. Anderson's arrangements for this purpose appear to be well considered and sufficient. For instance, thana Raghunathgunge, in the Jungypore sub-division, where the people were reduced by the loss of previous crops, has been divided into six circles, each under the charge of a relief officer, working in concert with the village *punchayets* and the delegates of the Moorshedabad Association. It is difficult to see how an organization of this kind, dealing with so limited an area, can fail to detect all cases of real distress; and, in fact, though it has been alleged that persons have died of starvation, the Lieutenant-Governor satisfied himself during his visit to Berhampore that none of these allegations were borne out by the facts. Similar arrangements have been made in other thanas where distress is apprehended. In order to enable the system to be fully organized, and to set free for their proper duties the police officers now engaged on relief work, the Lieutenant-Governor authorizes the Collector to appoint for a period of two months, from the present time, as many canungoes and other ministerial officers as may be necessary for the administration of relief. The pay of the canungoes should not exceed Rs. 50 a month, and that of the subordinate officers should be graduated on a corresponding scale. Their salaries will be charged to relief, and will be adjusted hereafter against the total expenditure incurred on the district, from whatever sources it may have been derived.

6. The requirements of the landless labourers throughout the district will be met for the present by the provision of work on the district roads. Everywhere roads have been breached by the floods, thus enabling the demand for immediate labour to be readily met in all parts of the district,

and the Road Cess Committee have for the time ample funds at their disposal. In the event of road work or the funds available for its execution falling short, the construction of the embankment of the Ranaghat-Bhugwangola line of railway from Krishnaghur through Nuddea and Moorshedabad would furnish labour for the population of the tracts which have suffered most severely from the floods; but the resumption of this work must depend in the first instance upon the ability of the provincial revenues to find the necessary funds, and in the last resort upon the willingness of the Government of India to make a special grant for the purpose.

7. During the Lieutenant-Governor's visit a large number of applications for advances under the Agriculturists Loans Act were presented by cultivators of the neighbourhood. In connection with these the working of the Act and the rules under it was discussed in conference with the Commissioner and Collector, and in order to expedite the granting of advances the latter officer was directed to accept the joint and several personal security of bodies of villagers in the manner laid down in Rule 7. This procedure, to which effect has already been given in Nuddea, dispenses with the lengthy enquiries necessary when immoveable property is pledged, and will, it is hoped, enable advances to be distributed rapidly enough to be of real assistance to the ryots in saving the later cold-weather crops. In most places which the Lieutenant-Governor has seen the cultivators' own resources have enabled them to sow *kalai*, for which they appeared to have seed already in hand; but in the case of crops like wheat and barley, for which the land requires more careful preparation, the judicious and early distribution of advances will probably be necessary. The grant to the Collector of Moorshedabad for advances under the Agriculturists Loans Act has been increased from Rs. 10,000 to Rs. 25,000.

8. In travelling from Daulat Bazar on the Bhairab to Akrigunge on the Ganges, the Lieutenant-Governor passed through a portion of the country affected by the Ganges flood. No signs of distress were apparent, and Mr. Pope, Commandant of the Central Bengal Light Horse, who lives at Akrigunge, assured Sir Rivers Thompson that there were no grounds for anxiety as to the condition of the people. At Rampore Beaulah it was ascertained from Mr. Ruddock, the Collector of Rajshahye, and from many other gentlemen with local knowledge, that the prospects of the *aman* crop were excellent; and from this and other evidence it is clear that the districts north of the Ganges have gained infinitely by the abundant rainfall, while their loss by floods has been confined to individual villages, and even there has been of trifling extent. The Collector of Pubna, Mr. Tute, met the Lieutenant-Governor at Sara, and explained that no material damage had been caused by floods in that district, and that the harvest would be a full one.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

**RESOLUTION BY THE GOVERNMENT OF BENGAL ON THE REPORT OF
THE CALCUTTA INTERNATIONAL EXHIBITION, 1883-84.**

REVENUE DEPARTMENT—MISCELLANEOUS.

Darjeeling, the 4th October 1885.

RESOLUTION.

READ—

Letter No. 263A, dated 31st July 1885, from the Secretary to the Executive Committee of the Calcutta International Exhibition of 1883-84, forwarding with remarks copies of the report of the Exhibition compiled under the orders of the Executive Committee.

Report of the Calcutta International Exhibition of 1883-84 compiled under the orders of the Executive Committee.

Letter No. 264A, dated 2nd August 1885, from the Secretary to the Executive Committee of the Calcutta International Exhibition of 1883-84, forwarding copies of the minutes of the Proceedings of the Executive Committee.

Minutes of the Proceedings of the Executive Committee.

The Executive Committee of the Calcutta International Exhibition of 1883-84 have submitted their report 16 months after the closing of the Exhibition.

In his speech, made on the 10th March 1884, at the closing of the Exhibition, Sir Rivers Thompson stated that it was the intention of the Bengal Government that a full report on the Exhibition should be published. The Report now submitted, redeeming this promise, gives an exhaustive account of the circumstances under which the Exhibition was held, and describes with much detail the exhibits which were brought together. It is a matter for regret that it was not found possible to publish the Report while the memory of the Exhibition was still fresh in the minds of the public, but the Lieutenant-Governor believes that delay was unavoidable by reason of the laborious nature of the work, and the little leisure which was available to the members of the Executive Committee for the compilation of the report.

2. The Committee remark that the Calcutta Exhibition of 1883-84 was the first attempt made in India to hold an Exhibition of an international character. "Exhibitions on a smaller scale had been held in various parts of India, but these were generally of a local character; and, where their scope was not purely provincial, no attempt was made to include in them specimens of other than Indian arts and manufactures. For the improvement of Indian art these Exhibitions were not without considerable value, but they necessarily did not embrace the other important objects of an Exhibition—the bringing of distant countries into closer commercial union with India, and the development of new branches of industry." The idea of having an Exhibition in Calcutta for the exposition of the arts and industries of India was under the consideration of the Lieutenant-Governor when, in October 1882, M. Jules Joubert, who had before successfully promoted similar Exhibitions in Australia, arrived in this country; and it was at his instance that what had been originally proposed as an Exhibition of the products of the Indian Empire took the form of an International Exhibition. Having obtained the assent of the Government of India to this wider and more ambitious project, together with a promise that other Local Governments would be invited to assist in securing the adequate representation at the Exhibition of the natural products and manufactures of all parts of India, Sir Rivers Thompson gave his sanction and support to the undertaking in a Resolution published on the 16th January 1883, and the work of preparation at once began.

A General Committee was formed consisting of the chief officers of the Supreme Government and of all Local Governments and Administrations, the great feudatory chiefs and nobles of India, and the leading officials and private individuals, both European and Native, of the various provinces; while in every province of India local committees were formed in aid of the Exhibition. The Governments of three of the Australian Colonies, viz. Victoria, New South Wales, and South Australia, appointed Commissions to promote the objects

of the Exhibition, and official representatives were sent to the Exhibition by five other British Colonies, viz. Ceylon, the Straits Settlements, Tasmania, Demerara, and Mauritius. From foreign countries delegates were sent by the Government of Austro-Hungary; by the French Colonies of Cochin China and Tonquin, and by the Dutch Colony of Batavia. The following nations were represented by exhibitors, but took no official action with respect to the Exhibition:—Great Britain, France, Germany, Italy, Belgium, Turkey, Japan, and the United States of America. The Executive Committee remark that the character of the Exhibition, which was in some measure promoted by private enterprise, no doubt prevented it from securing the participation of foreign countries in the same manner as would have been the case if it had been from the first declared to be an undertaking of Government.

The Lieutenant-Governor takes this opportunity of tendering his thanks to the Government of India and to all Local Governments and Independent States in India, and to the Colonial and Foreign Governments who were represented at the Exhibition, for the cordial assistance rendered. To the district officers in all parts of India, and to other members of local committees who gave their time and labour in the cause of the Exhibition, the Lieutenant-Governor is deeply indebted.

3. To help to meet the cost of collecting samples of the products and manufactures of India, the Bengal Government provided a sum of Rs. 50,000, which was distributed by the Government of India among the different Local Governments, and in all cases the allotments made were supplemented by grants made by the Local Governments from the funds of their own provinces. For the collection of exhibits in these provinces a sum of Rs. 10,000 was placed in the hands of the Executive Committee by the Government of Bengal. Many articles were also lent by Native and European gentlemen in India for exhibition, and for these contributions the Lieutenant-Governor desires to express his thanks. In particular the local committee of the Presidency district took special measures for the representation of Calcutta. Subscriptions were raised, and a separate Court, furnished and equipped entirely at the expense of the Calcutta community, was the result of their liberality and public spirit. This Court was one of the largest in the Exhibition, and was most artistically arranged.

4. The management of the Exhibition was in the hands of the Executive Committee who worked in concert with M. Joubert. After having obtained the sanction of Government for the Exhibition, M. Joubert left Calcutta at the end of December 1882 for the Australian Colonies in order to secure their adequate representation, and he at the same time appointed an agent in London to make known the circumstances of the Exhibition and to obtain the co-operation of mercantile and manufacturing firms in England and on the Continent.

While arrangements had thus been made for the collection of exhibits, the Exhibition buildings were being built by the Public Works Department of this Government. It had originally been M. Joubert's intention to erect temporary buildings for the Exhibition at his own expense, but he subsequently found that the scheme was likely to assume much larger proportions than he had ever imagined, and on his request Government obtained for him from the Trustees of the Indian Museum the use of the Museum building, and finally undertook the construction of the necessary annexes. Practically the entire administration of the undertaking had now devolved upon the Executive Committee, M. Joubert continuing from the date of his return to India in June 1883 to control, subject to the supervision of the Executive Committee, all sections except the Indian section of the Exhibition.

5. A description of the Exhibition buildings and of their internal arrangements is given in Chapter II of the Report. By the end of June it had become evident, from the number of applications received for space, that the accommodation must be greatly increased, and it was decided to enclose a large space upon the maidan opposite to the Museum to contain the Indian Court, the Machinery Court, and other Courts, and ultimately the total space enclosed for the Exhibition amounted to nearly 22 acres, including covered space of about 800,000 square feet or nearly seven acres, of which about 200,000 square feet represented buildings newly built by the Executive Committee for the occasion, the remainder being provided

in the Museum building or having been built at the charge of the exhibitors themselves. The buildings comprised, besides a portion of the Indian Museum, a new permanent building specially erected to form a portion of the future home of the Bengal Art collection, six annexes contiguous to the Museum, a large Indian Court and a still larger Machinery Court on the maidan, besides several minor buildings.

Even this space was, however, insufficient for the proper display of the exhibits which, in some Courts, were overcrowded, and in his report read at the opening of the Exhibition, Colonel Trevor, the Vice-President of the Executive Committee, expressed the regret of the Committee that it had been necessary to refuse numerous applications for space which had arrived since the last day fixed for their reception. Colonel Trevor observed that the number of these applications made it absolutely certain that, had it been possible to devote two years instead of one to the preparation for the Exhibition, the number of articles exhibited would easily have filled more than double the space which was provided on this occasion. Unfortunately the Executive Committee were hampered in this particular matter by the exigencies of M. Joubert's position, but the experience gained in Calcutta as to the necessity of the fullest time for preparation will not be lost in future Exhibitions of the kind which may be undertaken in India.

The temporary buildings were constructed of materials taken from dismantled Government buildings, of which a large quantity happened to be available at the time. The building operations were carried out by officers of the Public Works Department under the immediate supervision of Colonel Trevor. To these gentlemen, who are named in Chapter II of the Report, the Executive Committee express their obligations for the untiring efforts by which, under many difficulties, the rapid completion of the buildings was accomplished.

6. The Exhibition was opened by His Excellency the Viceroy on the 4th December 1883, just one year after the proposal for holding it was first laid before Government. It remained open till the 10th March 1884, and was then closed by the Viceroy. It was a matter for regret that it could not be kept open longer, as the daily numbers of persons admitted continued to increase before the closing, and there is no doubt that, if circumstances had permitted an extension of the open period to the time ordinarily devoted to such Exhibitions in Europe, the results would in many ways have been beneficial. Exhibitors, however, had come prepared to stay for three months only, and were unwilling to endure the heat of an Indian summer, when the season during which business was likely to be done was over. The buildings, moreover, were of a temporary nature, and were not intended to resist the storms which accompany the approach of the hot weather.

7. No adequate notice of the exhibits gathered together in the different Courts can be attempted in this Resolution. A description of each Court, and a catalogue of its exhibits, have been given in the Report. The descriptions of the Courts, written for the most part by the officers in charge, and especially the description of the Economic Court written by Dr. George Watt, besides giving very full notices of the collections displayed, contain much useful information with regard to the resources and industries of the countries which were represented. The catalogues of the Indian exhibits form a useful record of the products and industries of this country to which reference will often be made.

The relative proportion of the numbers of exhibits from each country represented may be gauged from the fact that the catalogue of the exhibits from the Indian Empire takes up the whole of the last volume of the Report consisting of 722 pages; the catalogue of the exhibits from Great Britain occupies 35 pages; that of exhibits from British Colonies 154 pages, (of which 123 pages are monopolised by the 'Australian Colonies'), and that of exhibits from foreign countries 55 pages. The beautiful collections of art work in the Indian Courts have perhaps furnished the most vivid recollections of the Exhibition in the minds of most visitors; but the solid merits of the collections of raw products and rough industries in the Indian Economic Court afforded especial ground for satisfaction to all persons interested in the welfare of the Empire. The exhibits in the Economic Court included the entire collection of the Bengal Economic Museum, collections made by the Revenue and Agriculture Department of the Government of India, collections

contributed by private individuals, trade samples supplied by the various Indian Chambers of Commerce and by merchants, and ethnological specimens purchased or obtained on loan. The arrangement of the exhibits in this Court was supervised by Dr. George Watt, Mr. F. B. Manson, and Baboo Trailokya Nath Mukerji, to all of whom much praise is due for their labours. The large part taken in the Exhibition by the Australian Colonies was especially pleasing, and the Lieutenant-Governor expresses his hope in the words used by Lord Ripon at the closing of the Exhibition, that the display of the large and varied resources of these young countries, and of the energy of their people, together with the friendly intercourse which was brought about by the Exhibition, may do much to promote trade between this country and those Colonies. The Lieutenant-Governor has recently received from the Exhibition Commission appointed by the New South Wales Government an interesting report of the part taken by that Colony in the Exhibition. With regard to the European exhibits, the following remarks made by His Excellency the Viceroy, with which the Lieutenant-Governor may be allowed to express his entire concurrence, deserve attention. Lord Ripon remarked:—

“In one respect I must say that the European exhibits in this Exhibition have not altogether fulfilled some of the hopes which I at least entertained. The requirements of the wealthy have been thoroughly considered, articles of luxury and splendour are to be found in these Courts in plenty, but little has been done to show what might be accomplished to supply the wants of the masses of the people; and especially the wants of the cultivators of the soil. Now I have no doubt that that has arisen mainly from the ignorance of the needs of these persons in that respect. Nothing can be more natural; but nevertheless I can assure the capitalists and inventors of Europe and America that there is ample room for the exercise of skill and ingenuity to supply the wants of the agricultural classes of this country, and to provide them with implements calculated to supersede the rude and primitive instruments which they now use. No doubt to do this may be beset with various difficulties, for we all know how attached the rural natives are to the practices and habits of their forefathers, but nevertheless I believe that those who have skill and the capital to devise improved agricultural implements would find a fair field, as time goes on, for the sale of articles of that description in this country. I mention this now in the hope that before another Exhibition is held here, those who are likely to become exhibitors hereafter will turn their attention to this subject.”

8. The total number of exhibitors in all the Courts of the Exhibition amounted to 2,500, and the articles exhibited exceeded 100,000 in number. The exhibits were divided into 149 classes, and for the purpose of judging them a separate jury was appointed for each class. The duty of nominating the juries fell almost entirely upon the Executive Committee with some assistance from exhibitors who were allowed to propose names of persons to be appointed jurors. The report comments on the difficulty which was experienced in obtaining qualified jurors in Calcutta (where technical knowledge of any kind commands a high price), with reference to the provisions of the Jury Regulations that no person should be a juror who was himself an exhibitor or in any way connected with an exhibition. It was ultimately, however, found possible to appoint qualified juries in all classes, and the Lieutenant-Governor joins the Executive Committee in thanking the gentlemen who, at a large sacrifice of time and labour, gave their gratuitous services. The fact that not less than three jurors were appointed in each of the 149 classes, and that the total number of jurors who served was only 176, suffices to show how great was the task which some among these gentlemen undertook. A list of the jurors is appended to this Resolution.

The valuable services rendered by Lieutenant-Colonel J. F. Fitzgerald Cologan, in his capacity as Superintendent of Juries, deserve especial mention. It was due to this officer's tact and judgment that the difficulties of a somewhat thankless office were so successfully surmounted.

The labours of the juries began on the 19th January 1884, and the last award was declared on the day of the closing of the Exhibition. Three thousand five hundred and ninety awards in all were made, which were classed as follows:—

Certificate of merit of the first class with gold medal				...	723
Ditto	ditto	with silver medal		...	1,175
Ditto	ditto	second class with bronze medal		...	1,031
Ditto	ditto	third	“	497
Ditto	ditto	fourth	“	117
Ditto	ditto	fifth	“	47

9. The total number of persons admitted into the Exhibition exceeded a million, including 817,153 persons paying for admission at the turn-stiles and about 200,000 season ticket-holders. The price of admission was fixed at four annas daily, except on one day of the week, which was reserved for visitors wishing to see the Exhibition with more comfort, when one rupee was charged. The daily average attendance for the 96 days, during which the Exhibition was open, amounted to 6,277 persons, and the largest numbers admitted on any one day were 16,183 on the 10th December 1883. As above noticed, the number of visitors to the Exhibition continued to increase before the day of closing, and as its fame extended only gradually to distant places in the interior, it would certainly have attracted visitors for a much longer time could it have been permitted to remain open. A noticeable feature of the Exhibition was the large number of native females of all ranks who, in opposition to the restraints of caste and custom, were constant visitors to its Courts. Special arrangements had occasionally to be made for the visits of native ladies of high rank. The duties of guarding the Exhibition were well performed by the Calcutta Police, but in spite of all precautions some thefts were committed, the most important of which was effected by wrenching off a piece of the gold throne exhibited by the Maharajah of Burdwan. The loss was made good to the Maharajah by Government.

10. The financial arrangements and results of the Exhibition are described in the fourth chapter of the Committee's report. It has been stated above that the management of the Exhibition from being at first a private enterprise was unavoidably converted into a Government undertaking. As a guarantee for the repayment of the expenditure incurred by Government upon the Exhibition buildings, M. Joubert entered into an engagement to make over to the Executive Committee all the receipts of the Exhibition from space money, gate money, and all other sources, and also to permit his accounts to be audited. The gross expenditure on the Exhibition buildings, on wages of attendants, advertisements, lighting, M. Joubert's drawings (Rs. 43,413-6-5 for his personal expenses, the salaries of his Secretary and foreman, &c.), and under all other heads, but exclusive of the sum of Rs. 60,000 spent on the collections of exhibits made in India, amounted to Rs. 5,04,248-12. Of this

* Certificates and medals are still being issued as fast as they can be procured from the Mint, and the account under this head is not yet finally closed.

sum more than Rs. 3,83,000 were expended on plant and buildings, and over Rs. 32,000 have been spent* on medals and certificates of award. This amount also does not include the sum of Rs. 13,659, which was the cost of the police employed in the Exhibition. The gross receipts of the Exhibition amounted to Rs. 5,02,858-2, of which Rs. 1,78,014 were obtained by gate money, Rs. 30,201 from season tickets, Rs. 91,418 from space money, Rs. 16,787 from deposits of exhibitors for duplicate certificates and gold medals, and Rs. 1,63,743 represented the value of buildings and building material taken over and sold by Government and by M. Joubert on account of Government; the balance of receipts was made up by payments for licenses to sell in the Exhibition, tenders for refreshment bars, and sundries. Any balance shown by the account when it is finally closed will be written off against the Bengal Government.

11. In return for the advances, amounting to Rs. 50,000, made by the Government of Bengal to other local Governments in India for the purchase of exhibits, the Government of Bengal was permitted to select articles from the collections sent from the various provinces to the value of its advances. The selection made, together with the collection of exhibits purchased in these provinces from the sum of Rs. 10,000 placed in the hands of the Executive Committee, forms the nucleus of the Art Gallery and Economic Museum of Bengal, established in the new building which adjoins the Imperial Museum, and which extended and enlarged, as the Lieutenant-Governor hopes, as funds become available, will be a permanent memorial of the Calcutta Exhibition of 1883-84.

12. In conclusion, the Lieutenant-Governor desires to express his thanks to the Executive Committee, and especially to their Vice-President, Colonel Trevor, for the valuable work done by them. A prominent part was taken by the Public Works Department in all branches of the Exhibition work. The arrangements with M. Joubert were carried out by

MANAGEMENT OF THE MUGHYA DOME SETTLEMENTS IN CHUMPARUN.

No. 1903J—D, dated Darjeeling, the 25th September 1885.

From—F. B. PEACOCK, Esq., Chief Secretary to the Government of Bengal,
To—The Commissioner of the Patna Division.

I AM directed to acknowledge the receipt of your letter No. 571G, dated the 14th August 1885, submitting a copy of the third annual report by the Magistrate of Chumparun on the management of the Mughya Dome settlements in that district.

2. In reply, I am to say that the report is a satisfactory one, showing, as it does, that this most troublesome clan are gradually taking to peaceful and honest pursuits. Much of the success of the experiment of forming colonies of the Mughya Domes in Chumparun is due to the great personal interest which Mr. Henry has taken in it.

3. As remarked by Mr. Henry, one of the most encouraging features in the scheme is that the domes have begun to take lands on their own account from the zemindars, thus clearly indicating their desire to settle down and live honestly. It is encouraging, too, to find that the zemindars are willing to have these people as tenants. It is observed that Mr. Henry reports that the two settlements at Bargaon and Futtehpoore will probably be self-supporting in future, and that, at all events, no grant-in-aid will be required from Government during the current year.

4. I am to request that you will be so good as to convey to Mr. Henry the thanks of Government for the continued interest he has taken in the Dome settlements in his district, and to say that the Lieutenant-Governor will watch with great interest the further development of what promises to be a measure of great practical utility.

5. I am to add that the services rendered by Head Constables Ramdhani Singh and Ambica Pershad, in charge, respectively, of the Bargaon and Futtehpoore settlements, and by Inspector Mokhey Lal Missir, have been noticed with satisfaction, and that the Inspector-General of Police will be asked to give the two former officers the promotion which they appear to have well deserved.

No. 571G, dated Bankipur, the 14th August 1885.

From—F. M. HALLIDAY, Esq., Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, Judicial Department.

I HAVE the honour to forward herewith copy of a report from Mr. Henry, Magistrate of Chumparun, on the management of the Mughya Dome settlement in his district.

2. The report is as usual full and interesting, and gives a very favourable and hopeful account of the ultimate success of the experiment; but for this we shall be indebted entirely to the extreme interest taken in the undertaking by Mr. Henry and the police officers employed under him. I have much pleasure in supporting the Magistrate's recommendation for some substantial acknowledgment being made by Government to the subordinate police officers he mentions.

No. 1193, dated Motihari, the 30th July 1885.

From—E. R. HENRY, Esq., Offg. Magistrate of Chumparun,
To—The Commissioner of the Patna Division.

I HAVE the honour to submit the third annual report on the administration of the Mughya Dome settlements in this district.

BARGAON SETTLEMENT.

This settlement consists of 112 adults and 51 boys and girls. During the year six males were admitted upon release from jail. One male, five females and three children absconded, and are said to be in Goruckpur. Three males, who had during the preceding year absconded and had reverted to criminal practices, were, with the aid of the settlement domes, arrested and brought to trial. One was sentenced to seven years, one to five years and one to six months' imprisonment. These prosecutions have had an excellent effect in convincing the domes that the supervision which the police are now able to exercise is strict and effectual, and that any attempt on their part to return to their old practices will inevitably lead to detection and conviction.

Seven domes were employed throughout the year as village chowkidars, and four as chowkidars under the Road Cess Department. Their conduct has been satisfactory. A bansphor dome was employed to teach the children bamboo work, and some of them have learnt sufficient to be able to earn money by making moras and baskets.

Cultivation.—The land attached to this settlement under cultivation was 48 local bighas and the outturn of the crops harvested was—

	Maunds.			
Aughani dhan	270
Bhadol dhan	496
Indian-corn	105
Rabi grain	148
Total				1 019

(pucca weight) from 48 bighas, the local bigha being about 1½ acres.

This outturn may be considered satisfactory, regard being had to the effect that the domes are only learning agriculture, and that the season was not particularly favourable. Better results are expected next year, as all the lands have been sown and the seed has germinated well; but much depends upon seasonable rain in August and the two following months. Arrangements are being made to extend the cultivated land attached to this settlement, the result of which will be reported next year. All the land has been divided amongst the settlers, who now are beginning to realize that they will reap the full benefit of their own labour.

One of the most encouraging facts in connection with the year's working is, that the domes have commenced to take lands direct from the zemindars on their own account. They pay the rent and provide all the necessary expenses for cultivation out of their own funds, and no interference, direct or indirect, is exercised by us in the matter of these lands. I have not the figures by me showing to what extent land has been taken up by them in this way, but their operations promise to be on a larger scale next year.

With a view to stimulating a spirit of enterprise amongst them, I caused it to be known that if any dome succeeded in purchasing for himself a plough-bullock, the pair to it would be given to him from the Government stock. No less than 14 bullocks have been purchased by the domes out of their savings, and they now own 14 pairs of plough-bullocks which they use for the cultivation of their lands. I am in hopes that before the end of next year a dozen more plough-bullocks will be purchased by them, and then the whole stock of Government bullocks will be absorbed, and the settlement will have 26 pairs of plough-bullocks belonging to private owners.

The rearing of poultry has proved profitable, as there is a brisk demand for this stock in the neighbourhood.

House accommodation.—There are 40 well-built houses at this settlement, of which 26 are tiled and 14 thatched. The roofs are supported on wooden props, as the material of which the walls are composed, being somewhat friable, was not adapted to bearing a heavy strain. All the tiles have been re-set, and the other roofs have been entirely re-thatched this year. The work has been so well carried out, that on the occasion of my last visit to the settlement a few days ago, I found that not a single house had leaked, although nearly 20 inches of rain had fallen during the month. During the present year we hope to get the remaining houses tiled, as thatched roofs require extensive yearly repairs, whereas tiled roofs properly laid last for five or six years without entailing much expense.

The masonry well is in good order, and the water-supply is said to be of satisfactory quality and sufficient in amount.

Several of the bamboo and sisoo trees planted on the bank of the homestead enclosure, died out during the year. They have now been replaced. The soil unfortunately appears ill-adapted to growing bamboos, but special precautions have been taken in preparing the ground this year; better results are expected than have hitherto been obtained.

The weekly *hat* established upon the settlement land is gradually becoming more frequented by buyers and sellers.

FUTTERPUR SETTLEMENT.

There are 61 adults and 39 boys and girls, in all 100 persons, at this settlement. During the year two males were admitted upon release from jail: one male and one female were convicted of theft and sentenced to two years' rigorous imprisonment. Five domes were employed as village chowkidars.

Cultivation land.—The area under cultivation attached to this settlement was 13½ local bighas (the local bigha being a little over an acre); the outturn of the crops was—

	Maunds.			
Aughani dhan	123
Bhadol dhan	6
Makui	63
Sadhi dhan	3
Total				195

There was besides a yield from the rabi crops upon the land twice cropped, the details of which I have not by me to refer to.

Having regard to the area of the land under cultivation, the yield secured was, I consider, decidedly good. Some of the domes have rented land on their own account direct from the landholders, and inducements are held out to them to take up as much land in this way as they can work.

Within this month I have at last succeeded in securing 10 bighas of good land for this settlement; this will bring the area under cultivation up to 23½ bighas, which at present is about as much as we can hope to cultivate successfully. There is great difficulty in obtaining good land in this neighbourhood, and it does not pay to break up fallow. If we can gradually extend the cultivation land to 40 bighas, this will prove quite sufficient for the requirements of this settlement. Obviously it is better to secure crop outturns at the rate of 16 or 18 maunds an acre from a limited area as we are now doing, than to double the cultivation area by taking in land of bad quality, the crops grown on which would barely pay for the cost of seed and cultivation generally. The settlers here are not so entirely dependent upon their fields as the Bargaon men, for the labour market is always brisk, and a day-labourer can earn sufficient wages to maintain himself all the year round by field work if so disposed. The orders of Government regarding the extension of the cultivation area, however, are not being lost sight of, and, as occasion offers, fresh lands will be taken up. It is necessary, however, to proceed with discretion, as the settlement would become extremely unpopular if any pressure were brought to bear upon the villagers of the neighbourhood to induce them to surrender their lands even upon payment of liberal compensation.

Of the ten bullocks belonging to this settlement, one died of snake-bite. None of the domes here have as yet been able to purchase bullocks on their own account, but some of them have expressed the intention of doing so during the ensuing year, when for every bullock they purchase, they will receive the pair from the Government stock.

House accommodation—There are 20 houses all in good repair. Of these, ten have been tiled, the thatched roofs of the remaining ten are in good order. Thatching-grass and bamboos are more easily procurable here than in the neighbourhood of Bargaon, so I attach less importance to the roofs being tiled.

There is a good well, and the water-supply is said to be wholesome.

Several of the domes here earn money by bamboo work and by rearing poultry.

I may sum up the result of the year's working by saying that both settlements are prospering beyond our anticipations, for it appears to be assured now that they will be able to maintain themselves as agricultural colonies without any further aid from Government. That the experiment of establishing them upon this basis was considered somewhat hazardous will be seen from the published correspondence of the North-West Province officers, to whom a reference upon the subject was made by that Government. The area of the land under cultivation is as yet small, regard being had to the actual numbers of the colonists, but the harvest yields show that it was thoroughly well cultivated. The more thrifty amongst the domes who have succeeded in saving a little have commenced to take up land on their own account from the zemindars, and as their resources increase, they will, no doubt, extend their operations. No better proof could be given of the change that is gradually coming over them than these instances of their dealing directly with the zemindars. It shows that they are beginning to realize that in future they will have to shift for themselves, and it also shows that landholders are not unwilling to accept them as tenants. To any person acquainted with the status allotted to domes by general consent a few years ago, these facts will be strong evidence that a marked reformation in their habits and modes of life must have been effected.

It would be premature to think that this reformation has been so radical that they might now be allowed to settle in other villages, where they would not be under efficient supervision, and where temptations to commit theft would be frequent. That many of them, if placed in this situation, would find temptation irresistible and fall away, I have no doubt; for it will take years to effect any real change in their opinions as regards the rights of property. But under the system in force here they are not exposed to much temptation; they are collected together in colonies, where one or two policemen or even intelligent chowkidars can keep an effective watch over them, while at the same time they have an opportunity of so improving their condition as to be placed above the necessity of reverting to criminal practices. So far we have succeeded in bringing to justice, with few exceptions, the domes who have receded and have re-commenced thieving, and the lesson has not been wasted upon those remaining at the settlements.

In conclusion, I am glad to be able to report that no grant-in-aid will be required from Government this year. I was able a few days ago to go over the cultivation of both settlements, and prospects are so good that I have no doubt whatever that the domes will be able to maintain themselves during 1885-86 without aid from Government.

I desire to bring to your notice the excellent work done by head constable Ramdhani Singh, who has been in charge of the Bargaon settlement. This officer can read and write but little, and consequently can only be promoted to a Sub-Inspector under special orders. He has, however, done such good work, and has borne such an excellent character throughout his service, that I should be glad if he could, as a special case, be promoted from head constable to 5th-grade Sub-Inspector. In previous reports I brought his name to your notice. Head constable Ambica Pershad, in charge of the Fattehpur settlement, has also worked to my entire satisfaction. Inspector Mokhey Lal Missir, whose services have already been recognized by Government, has continued to supervise both settlements efficiently.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 3rd October 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
BURDWAN DIV.	1 Burdwan, Oct. 3 '85	0.71	Weather—seasonable. <i>Aus</i> being harvested. Prospects of <i>aman</i> good. Price of rice 12 to 16 seers per rupee.
	Culina	0.48	
	Cutwa	0.58	
	Raneegunge	2.00	Weather—clear, cloudy and sunny alternately. Late rice generally a very promising crop, but it has suffered from the late heavy rain over a limited tract; other crops doing well. Public health good.
	2 Bankura, " 3	1.00	
	Bishnupore	0.70	Weather—seasonable. Prospects of rice crop good. Prices of food-grains lower. Cholera still in the district; general health otherwise satisfactory.
	3 Beerbhoom, " 3	0.87	
	Ranpore Haut	3.23	Weather—seasonable. Outside the flooded area prospects on the whole good; but in at least one-fifth of the district more than half an average crop cannot be expected. Public health normal.
	4 Midnapore, " 3	0.77	
	5 Hooghly, " 3	1.44	Weather—fine, with one or two storms only at Sudder. Prospects on the whole favourable in the Serampore and Sudder sub-divisions, and in (Goghat thana of the Jehanabad sub-division. In Khanacul and Jehanabad loss of crop from floods very considerable.
Serampore	0.42		
Howrah, " 5	1.34	Weather—hot with puffs of north wind; mornings and evenings cooler. Most of the paddy (about three-fourths of the whole district crop) is destroyed. <i>Boro</i> seedlings being reared. Health good.	
Oodoberiah	1.96		
Central Districts.			
PRESIDENCY DIV.	6 24-Pergha, Oct. 5 '85	1.17	Weather—seasonable; rather hot. Prospects of <i>aman</i> paddy, except on low inundated lands, are good. Harvesting of <i>aus</i> continues with an estimated outturn varying from 10 to 12 <i>ammas</i> . Public health good.
	7 Nuddea, " 3	1.28	
	Kushtia	6.37	Weather—seasonable. Heavy rain on the 1st instant. Rivers falling day by day, and prospects improving. <i>Kalai</i> being sown everywhere.
	Meherpur	2.28	
	Chusabanga	4.21	Weather—very hot with occasional rain. Except in inundated parts north of Satkhira prospects of <i>aman</i> paddy are very good. At Satkhira rice selling at Rs. 3-2 per maund. Public health generally good.
	8 Khoolna, " 3	1.44	
	9 Jessore, " 3	1.68	Weather—seasonable with occasional rain. Harvesting of <i>aus</i> paddy finished almost everywhere. It has yielded a fair outturn on the average. Prospects of <i>aman</i> fair except in the Bongong sub-division, where this crop over a large area has been almost wholly destroyed by the inundation. The flood-waters are fast subsiding. Fever continues.
	Jhenida	2.89	
	Narail	0.35	Weather—seasonable. Prospects of <i>aman</i> rice in the Barh excellent. <i>Kalai</i> being extensively sown and doing well. Prospects generally much brighter. Common rice selling at from 13 to 15 seers per rupee. Public health good.
	Bongong	1.25	
10 Moorshedabad, " 3	0.18	Moderate rain this week. Weather fair and seasonable. Harvesting of jute and <i>aus</i> finished. Transplanting of <i>aman</i> also finished; state and prospects of this crop good. Rice selling at from 13 to 20 seers per rupee.	
Lalbach	1.14		
Kandi	3.20	Weather—mornings rather cloudy and cool, days hot. Harvesting of <i>aus</i> still continues. Prospects of standing crops fair on the whole. Transplanting of <i>ganja</i> seedlings going on in Nowgong. Fever prevails.	
Jungipore	0.52		
11 Dinagepore, Oct. 2	0.72	Weather—hot with rain to the east and south-east. Transplanting of <i>aman</i> over. Other crops doing well. Price of rice at Itanpore has risen considerably in spite of the good harvest of <i>aus</i> and the promising state of the <i>aman</i> plants which are thriving very well. Price of salt has risen 50 per cent owing to the break in the Eastern Bengal Railway. Fever and bowel-complaints prevalent. Rain daily; weather pleasant; another slight shock of earthquake on 28th ultimo. Prospects of winter crops good. Public health fair.	
12 Rajshahye, " 3	2.79		
Natore	3.26	Weather—rainy, but fair in the latter part of the week. Rivers falling rapidly. Crops in low lands have suffered to some extent, but general prospects good. Fever still prevalent about Serajgunge.	
Nowgong	2.17		
13 Itanpore, " 3	0.09	Weather—bright and fine. Potato harvest has disappointed expectation owing to excessive wet. All other prospects excellent.	
Gaibanda	5.41		
Kurigram	5.70	Weather—seasonable, nights generally cool. <i>Aman</i> paddy doing well in all parts of the district. Recent rain has done much good. Public health generally good.	
Nilphamari	1.43		
14 Bogra, " 3	3.10		
15 Pubna, " 3	3.16		
Serajgunge	2.91		
16 Darjeeling, " 3	...		
17 Julpigoree, " 3	5.73		

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>continued.</i>			
<i>Eastern Districts.</i>			
Dacca Division.	18 Dacca, Oct. 3 '85	1.81	Weather—seasonable. Harvesting of jute and <i>aus</i> paddy nearly completed. Sowing of <i>roachia</i> paddy finished. Early <i>amun</i> blossoming. Prospects of crops good. Public health good.
	Manickgunge ...	0.21	
	Munshigunge ...	0.46	
	19 Furreedpore, " 3 "	1.82	Weather—seasonable. Prospects good. Jute and sugarcane have suffered somewhat from excess of water, but are on the whole good.
	Narsingunge ...	0.02	
	20 Backergunge, " 1 "	0.58	Weather—seasonable. Harvesting of <i>aus</i> paddy finished. Transplanting of <i>amun</i> completed. General health bad.
	21 Mymensingh, " 2 "	3.84	Heavy rain on the 30th, 2.61 inches registered at Sudder station, and 3.95 inches at Netrokona. Rivers still high. Weather cool. Much damage to crops on low lands by floods. General prospects good.
CHITTAGONG DIVISION.	Jumalpur ...	4.91	
	Kishoregunge ...	1.50	
	Attia ...	0.91	
	Netrokona ...	8.33	
	22 Chittagong Oct. 6 '85	2.40

	Fenny ...	0.32	
BEHAR.	24 Tipperah, " 1 "	2.92	Weather—hot. Showers from Wednesday night (30th September). New rice has come into the market, but price has not fallen owing to large exportation. Transplanting of <i>amun</i> completed. Prospects fair. Public health good.
	Brahmanbariah ...	0.14	
	Chaudpore ...	0.15	Weather—unsettled with high winds and occasional rain. Prospects generally good except in limited tracts where some damage has been done by floods.
	25 Chittagong Hill Sept. 29	0.08	
	Tracts. ...	0.08	Weather—hot and occasionally cloudy. Harvesting of <i>joom</i> paddy in full swing. Prospects of cotton and sugarcane good.
	Hill Tipperah, " 30 "	0.04	
	Weather—close. Transplanting of <i>amun</i> nearly finished. <i>Til</i> , cotton and sugarcane doing well. Public health good.		
PATNA DIVISION.	26 Patna, Oct. 3 '85	0.50	Weather—hot. <i>Bhadoi</i> crops being harvested. Prospects of paddy continue good. Public health good.
	Dinapur ...	1.40	
	27 Gya, " 3 "	Nil	Prospects of <i>khurif</i> excellent. Fields being prepared for <i>rubbee</i> . Cholera and fever reported in places. Health generally good. Price of best rice slightly risen. No notable rise in price of other grains.
	28 Shubabad, " 3 "	Nil	
	Buxar ...	0.55	Weather—clear and warm. Prospects of winter rice good. Cholera and fever of a bad type still prevalent. Prices stationary.
	Sasaram ...	Nil	
	Rhabhua ...	1.25	Weather—fine and clear. <i>Bhadoi</i> harvest completed; outturn estimated at 8 to 10 annas on an average. Prospects of paddy very favourable. Transplanting of tobacco plants going on. Prices falling. A few cases of cholera reported from the Madhubani sub-division.
	29 Darbhanga, " 3 "	3.09	
	Tajpur ...	2.58	
	Madhubani ...	4.15	Weather—mostly clear and bright. <i>Bhadoi</i> harvest nearly over; <i>aghani</i> crop promising, except where swamped. Rivers in very high flood. A good deal of cholera still reported from Sitamarhi; in the rest of the district public health appears to have improved.
	30 Mozufferpore, " 3 "	Nil	
	Sitamarhi ...	1.72	Weather—seasonable. Harvesting of <i>bhadoi</i> nearly completed with almost average outturn. Prospects of paddy continue good. Manufacture of indigo <i>khonti</i> going on. Sporadic cases of cholera and fever still reported, but on the whole general health good.
	31 Sarun, " 3 "	0.42	
	Sewan ...	2.34	Weather—seasonable. <i>Bhadoi</i> crops being harvested. Prospects of paddy continue good. Prices stationary. Cases of cholera and fever still reported but on the whole general health fairly good.
	Gopalgunge ...	Nil	
	32 Champaran, " 3 "	0.82	
BRAHMAPUTRA DIVISION.	33 Monghyr, Oct. 3 '85	0.61	Weather—fine with passing clouds; yesterday (2nd) heavy rain-storm. Prospects of the <i>aghani</i> continue good. <i>Kurthee</i> and <i>kalai</i> are being sown. Prices steady. Public health good.
	Begusarai ...	1.32	
	Jamni ...	1.19	Weather—fine and cool. Prospects of winter rice very good. <i>Kalai</i> and <i>kurthee</i> being sown. Labourers getting work everywhere. Cholera decreasing.
	34 Bhagulpore, " 3 "	Nil	
	Banka ...	0.43	Weather—fine with occasional showers. State and prospects of crops good. <i>Kalai</i> and <i>kurthee</i> being sown; cold-weather crops coming up well. Much fever and a little cholera.
	Muddehporeah ...	0.33	
	Soopole ...	1.79	Weather—fine and clear with hot sun. Prospects of <i>kaimansi</i> rice continue good. Sowing of <i>kalai</i> nearly completed. <i>Bhadoi</i> rice being harvested in Gasole and Bamongla. Common rice selling at 13 seers, and new crop at 17 seers per rupee at Englishbazar.
	35 Purneah, " 3 "	0.70	
	Kissengunge ...	8.94	Weather—seasonable; cold weather setting in. Paddy crop promises to be very good. Cholera still prevalent in parts of the district.

ORISSA.			
ORISSA DIV.	38 Cuttack	...	Report not received.
	39 Pooree, Khoorda " 1 "	0.16 1.12	Weather—hot, with occasional showers. Second weeding of late <i>sarad</i> paddy is going on. Early <i>sarad</i> is in ear. The late cyclone has done damage to <i>pda</i> gardens and sugarcane in Dandimal in Khoorda, and in pergunnah Kodhai close to the Cuttack district. State and prospects of paddy crops in the tracts bordering the Chilka are bad. Common rice selling at an average of 17 seers 4 chittacks per rupee in the Sudder sub-division, and 16 seers 15 chittacks in the Khoorda sub-division. Public health fair.
	40 Balasore, " 2 "	0.12	Weather—bright and sultry. Prospects of rice crop generally good, save on the east side of the east canal, where the sea-waves of the 22nd ultian caused some damage. Public health good.
CHOTA NAAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh, Oct. 2 '85	1.50	Rain reported from several thanas. Weather bright and clear at head-quarters. Harvesting of <i>bhadra</i> completed; outturn 8 to 12 annas. Rice and other crops continue to promise well. Cholera abating.
42	Lohardugga, " 3 "	0.79	Weather—mornings and evenings cool. <i>Gora dhan</i> has given a very good outturn. Prospects of winter rice favourable. Price of coarse rice from 1 to 2 seers cheaper per rupee. Cholera still prevalent.
43	Singbhoom, " 2 "	1.85	Weather—seasonable. Prospects of crops continue excellent everywhere. <i>Bhadra</i> being reaped, and ground being prepared for <i>rubber</i> . Prices easy. General health good.
44	Manbhoom, Govindpore " 3 "	0.34 0.99	Weather—fine. Prospects of winter crops continue excellent. Prices stationary. Public health good.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 6th October 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 2ND OF OCTOBER 1885.

DURING the week under review the meteorological conditions have been nearly normal. As is usually the case at the end of September and beginning of October, the monsoon current blowing over Bengal has commenced to slacken rapidly, rainfall has largely diminished in quantity, while the area over which the rain has fallen has also considerably decreased. With the increase of pressure which took place after the disappearance of the cyclonic storm of the previous week, pressure became rather largely above the normal, and the pressure over the province was very uniform. Light and rather unsteady winds therefore prevailed over the province for the first four or five days of the week, and except in North Bengal, the only rainfall which took place consisted generally of light local showers. In North Bengal and some parts of Chutia Nagpur during this period rainfall was a little more general, and particularly in the latter instance on the 26th some rather heavy falls of rain were recorded, but in other districts such as South Behar and the greater part of North Behar practically no rain was recorded. On the 1st of October, however, pressure had fallen for two days in succession, and there were indications of the formation of a very feeble area of low pressure over part of South Bengal, and these indications were rather more pronounced on the following day. Winds also showed a tendency to circulate round the area of low pressure, and as the result of these slightly disturbed conditions, rain became decidedly more general in the southern districts. Thus on either one or both of the last two days of the week, though in most instances it was light, Orissa, South-West Bengal, East Bengal and the greater part of Behar reported good showers. The slight depression, however, was of such feeble character that it was evident it would only affect the weather of the province to a slight degree and for a brief period, and thus at the close of the week all the conditions which were present were those of the transition period which generally marks the gradual closing of the rainy season. Light winds, generally of rather variable nature and direction, have therefore been characteristic of the week under review; barometric pressure has been high, temperature has also exceeded the normal, while in most districts rain fall has been decidedly light and local and rather below the normal fall for the week.

The average pressure for the previous week had been dependent on the passage of the small cyclone, and while it had been below the normal, particularly in Orissa and in the western districts generally, in the eastern districts pressure had been very distinctly above the normal. The tendency of the changes during the present week has been to decidedly increase the excess pressure over the whole province, and to make the distribution more regular. The increase of pressure is seen by the fact that the average pressure for the week over the whole province has been equal to a little more than a tenth of an inch, and that the distribution of pressure has also become much more regular is shown by the fact that the variations of pressure in the different meteorological divisions only range from an excess of 0.114" in Orissa to an excess of 0.094" in North Behar, while the smallest excess recorded is at Gya, where it equals 0.081".

The temperature changes during the week have been generally small, and with the small amount of rainfall and the comparative absence of cloud, the day or maximum temperatures have continued comparatively high. On the other hand the night temperatures or minimum temperatures are now beginning to decrease, and some night temperatures which are fairly low for the season have been recorded. At the plains stations many of the observatories during the week have reported minimum temperatures of about 75° on one or two nights of the week, and this is distinctly low for the end of September or commencement of October. Nevertheless the average mean temperature for the week has been in all districts, except North Behar and Chutia Nagpur, very slightly above the normal, but the mean temperature of the whole province only differs from the normal by an excess of three-tenths of a degree.

As has before been stated, the rainfall has been generally light throughout the week, and the heaviest and most general rain was reported on the 1st and 2nd of October. The district which has received the largest average amount of rain is East Bengal, which records 2.31 inches. The normal fall in this district for the week is 2.30 inches, so that the actual amount received is practically normal. The stations in North Bengal have received an average fall of 2.27 inches for the week, while the normal fall for the same period is 2.23 inches, the actual fall has thus been about two per cent. in excess of the normal. The stations in South-West Bengal report the average amount of 1.16 inches against the normal fall of 1.23 inches. In this district the rainfall has therefore been distinctly in excess of the normal, and the percentage of excess has been about 18. Chutia Nagpur reports an average fall of 1.10 inches, the normal fall for the period being 1.42 inches, and therefore shows a defect of about 12 per cent. The average fall in South Behar has been 0.58 inch, while the normal amount is 1.25 inches, the fall is therefore less than half the normal quantity, while in Orissa the actual fall for the week has only been 0.31 inch against the normal amount of 1.40 inches, and this district has therefore received a fall little more than a fifth of the normal. For the whole province therefore the fall is distinctly below the normal, the general defect from the normal over the whole province being 28 per cent. The number of rainy days, too, over the province has also been distinctly below the normal in all districts except North Bengal, and thus, while the normal number of rainy days over the whole province for the week is 2.5, the actual average number of rainy days has been two only.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 2nd of October 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.							
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of Septem-ber.		Since 15th May 1885.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of former years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.6 higher; and, finally, the thermometer, which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards, is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

ALEXANDER FIEDLER,

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 5th October 1885.

For Meteorological Reporter to the Govt. of India.

Miles.

The highest pressure of wind on one square foot ... 7
lbs.

The mean relative humidity ... 84
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 83

The total fall of rain from 27th September to 3rd October 1885 ... 1.63
The average fall of the corresponding period for 24 years, S. G.'s Office ... 1.54

The total fall from 1st January to 3rd October 1885 ... 62.11
The average fall of the corresponding period for 24 years, S. G.'s Office ... 59.46

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newmann's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

The total fall of rain from 27th September to 3rd October 1885 ... 1.85

The mean temperature and humidity are obtained by applying to the mean of the 10n, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 5th October 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE principal results to be gathered from the mortuary statistics of the districts in Bengal for the month of August 1885, as exhibited in the appended statement, are the following:—

1. That the deaths of 136,383 persons were registered among a population of 66,163,884, or at the rate of 24.72 per 1,000 per annum, against 18.72 per 1,000 in the preceding month, and 19.56 per 1,000 in the corresponding month of 1884, indicating, as compared with both the past periods, a considerable advance in the number of deaths recorded.

2. That the undermentioned districts returned the highest proportions of deaths:—

Districts.			Districts.		
		Ratio per mille.			Ratio per mille.
Monghyr	...	51.36	Hazaribagh	...	35.88
Patna	...	45.48	Mozufferpore	...	34.80
Bhagulpore	...	40.56	Sarun	...	33.84
Gya	...	39.96	Shahabad	...	29.04
Chumparun	...	38.52	Nuddea	...	27.00
Sonthal Pergunnahs	...	38.16	Puri	...	24.96
Birbhum	...	38.04			

3. That the mortality from the following specific heads of disease stands as follows:—

			Ratio per mille during—	
			August 1885.	August 1884.
Cholera	4.08	1.20
Small-pox06	.12
Fever	15.60	13.92
Bowel-complaints	1.08	.84
Injury72	.60
Other causes	2.88	2.52

The noticeable points indicated by the above figures are that, excepting small-pox, the mortality from all the death-causes, notably from cholera and fever, was greater in August 1885 than during the corresponding month of the preceding year.

4. That the highest death-rates from cholera, fever, and the maladies classed under the head of "Other causes" were returned from the following districts, the rest of the diseases not proving noticeably fatal anywhere:—

Cholera.		Fever.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Sonthal Pergunnahs	16.20	Monghyr	33.72	Sarun	10.80
Mozufferpore	16.08	Gya	28.44	Puri	10.56
Birbhum	15.12	Patna	26.16		
Chumparun	14.88	Bhagulpore	24.96		
Monghyr	12.36	Nuddea	23.16		
Hazaribagh	10.56	Hazaribagh	20.88		
Bhagulpore	10.20	Julpaiguri	20.40		
Puri	8.52				
Sarun	8.16				
Cuttack	5.88				
Gya	5.64				
Shahabad	4.92				
Patna	4.20				
Durbhanga	3.96				
Murshedabad	3.24				

5. That with regard to mortality referable to Sex, Class and Age, the rates stand as follows:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	27.00	Christians	14.40	Under 1 year	131.76
Females	22.32	Hindus	27.36	1 and under 5 years	29.88
Ratio of males deaths to every 100 female deaths	118	Mahomedans	19.68	5 " 10 "	15.00
		Budhists	16.44	10 " 15 "	13.56
		Other classes	21.84	15 " 20 "	17.16
				20 " 25 "	17.40
				25 " 30 "	19.20
				30 " 35 "	24.00
				35 " 40 "	24.00
				40 " 45 "	33.48
				45 " 50 "	33.08
				50 " 55 "	33.08
				55 " 60 "	33.08
				60 years and upwards	52.08

CE OF SANITARY COMMISSIONER FOR BENGAL, }
R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.
The 5th October 1895.

MEMORANDA.

THE annexed table exhibits the vital statistics of the principal Municipalities in Bengal for the week ending 19th September 1885. The figures exhibited in it indicate:—

1. That the birth and death-rates in the Municipalities in question amounted, respectively, to 26·4 and 37·4 per 1,000 of population, as opposed to the birth and death-rates of 25·3 and 41·9 per 1,000, respectively, during the preceding week ending 12th September, showing a small improvement in the registration of births with a large decline in that of deaths.

2. That the following Municipalities returned the highest proportions of births and deaths:—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Bhagulpore	53·4	Bhagulpore	101·4
Gya	42·3	Gya	56·1
Patna	34·7	Patna	51·2
Durbhanga	34·6	Chittagong	49·3
Purneah	34·6	Burdwan	41·2
Serampore	31·4	Chupra	41·0
Chittagong	30·5	Suburbs of Calcutta	38·5
				Utterpara	37·8
				Mozufferpore	37·7
				Monghyr	37·1
				Serampore	33·4
				Arrah	31·2

3. That the mortality from the chief death-causes stood as follows:—

				Ratio per mille during the weeks ending—	
				19th September 1885.	12th September 1885.
Cholera	2·0	4·0
Small-pox	·2	·03
Fever	17·9	17·5
Bowel-complaints	6·8	7·8
Injury	·4	·8
Other causes	10·1	11·7

indicating that, in comparison with the preceding week, there was a sensible abatement in the death-rates from cholera, bowel-complaints and the maladies recorded under the head of "Other causes," and that the casualties from the rest of the diseases exhibited only fractional differences

4. That while the mortality from small-pox and injury was nowhere noticeably high, the Municipalities named below were reported to have returned the highest death-rates from the rest of the diseases:—

Cholera.		Fever.		Bowel-complaints.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Arrah	12·0	Bhagulpore	56·1	Bhagulpore	17·2	Bhagulpore	19·9
Chupra	6·8	Utterpara	37·8	Patna	12·3	Gya	17·7
Gya	5·5	Burdwan	32·0			Puri	14·7
Bhagulpore	5·4	Chittagong	25·8			Chupra	12·7
		Mozufferpore	25·5			Suburbs of Calcutta	12·6
		Monghyr	24·4			Patna	12·6
		Gya	23·9			Serampore	11·8
		Patna	23·3			Dacca	11·7

5. That the mortality according to Sex, Class and Age stands as follows:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	38·0	Christians	34·8	Under 1 year	348·1
Females	36·6	Hindus	42·0	1 and under 5 years	69·2
Ratio of male deaths to every 100 female deaths	117	Mahomedans	31·2	5 " 10 "	22·6
				10 " 15 "	20·8
				15 " 20 "	16·7
				20 " 30 "	18·8
				30 " 40 "	20·3
				40 " 50 "	21·4
				50 " 60 "	43·7
				60 years and upwards	85·9

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 5th October 1885.

Total	7,147'97	6,526'43	6,526'79	7,695'95	13,674'42	13,316'74

GENERAL REMARKS AND EXPLANATIONS.

THE total weight of traffic carried during the month is 13,316'74 tons against 13,674'42 tons for the corresponding period last year, the decrease being 357'68 tons due, as will be seen from the comparative statement given above, to a falling off under the heads of "Miscellaneous," Jute, Piece-goods, Railway materials, Sugar, and Seed.

INCREASES.

Food-grain Tons 1,258'16
This increase is mainly due to large quantities of new *aus* paddy having been sent from Rangpore and Dinagapore to the Rajshahye and Bogra districts.
Ginger Tons 121'82
Due to a good crop and demand for export.
Gunny-bags Tons 56'06
Transactions in this staple were limited in the Calcutta market, the increase is consequent on increased traffic in food-grain.
Salt Tons 230'49
The increase was expected in the face of a heavy falling off in May and June last.
Tea Tons 113'80
Prices and demand both continue to be good in Calcutta.
Tobacco Tons 516'17
The steady increase in the weight of this commodity passing over the line is due to a good demand in Calcutta for export.

DECREASES.

Ale Tons 16'15
The decrease under this head is due in a great measure to a falling off in the Commissariat consignments, and will probably be made up later on.
Jute Tons 1,251'92
The Calcutta market is in a very dull and unsatisfactory state, and there is little business doing.
Miscellaneous Tons 360'51
The decrease is expected in the face of a steady increase during past few months.
Piece-goods Tons 357'43
A heavy traffic was done in this staple last month to meet Poojah requirements, and the falling off is due to the local markets being already well stocked.
Railway material Tons 508'95
The decrease is due to less coal having been sent forward this month for the Locomotive Department than in the corresponding period last year.
Sugar Tons 52'90
The decrease is not unusual in the face of the steady increase in this staple from January to June last.
Seed Tons 106'32
Due to the Calcutta market being unfavourable to despatchers.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 10th October 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
SUNDERMAN DIV.	1 Burdwan, Oct. 10 '85	0.03	Weather—very warm. Harvesting of <i>aus</i> going on. Prospects of <i>amun</i> good. Price of rice 12 to 16 seers per rupee. Health generally good.
	Culna ...	2.09	
	Cutwa ...	0.90	
	Raneesgunge ...	1.46	
	2 Bankoora, " 10 "	0.01	Weather—seasonable; rather hot. Harvesting of <i>aus</i> completed. Prospects of <i>amun</i> favourable. Prices stationary. Public health good.
	Bishenpore ...	Nil	
	3 Beerbhoom, " 10 "	0.51	Weather—seasonable. Prospects of rice crop good. <i>Aus</i> coming into ear. Prices of food-grains continue to fall slightly. A few cases of cholera; public health otherwise normal.
	Rampore Haut ...	0.16	
	4 Midnapore, " 10 "	1.00	Weather—warm and sultry. Prospects everywhere good outside the flooded tracts. <i>Boro</i> rice being sown. Fever prevalent as usual at this time of year.
	5 Hooghly, " 10 "	0.02	
Serampore ...	0.55	Weather—clear and warm; cool mornings. Prospects of all crops good except in half of the Jehanabad sub-division where there has been great loss. Fever prevalent in the district, and a few cases of cholera reported from the Jehanabad sub-division.	
Jehanabad ...	1.29		
Howrah, " 12 "	Nil*	Weather—hot with westerly winds. What crops remain are good. Enquiries show loss of paddy at about 3,00,000 bighas besides loss of other crops. Preparations for planting <i>boro</i> going on. Health good.	
Oolooberiah ...	Nil		
Central Districts.			
PRESIDENCY DIV.	6 24-Pergha, Oct. 12 '85	Nil*	Weather—seasonable. Prospects of crops, except in flooded parts of the district, are good. Public health on the whole good.
	7 Nuddea, " 10 "	Nil	
	Knshtia ...	1.04	Weather—seasonable. Threatens rain. <i>Amun</i> promises well where not flooded. Cold-weather crops are being sown everywhere. Health fair.
	Chuadanga ...	1.85	
	8 Khoolna, " 10 "	0.24	Weather—hot and sultry. Except in two thanas where <i>amun</i> has been damaged by flood, prospects continue very good. Coarse rice at Satkhira Rs. 3-2 per maund. Public health fair.
	9 Jessore, " 10 "	0.05	
	Jhenida ...	0.18	Weather—dry and fine. Flood gradually subsiding. <i>Amun</i> destroyed over a large area in the Bongong sub-division; in other sub-divisions its prospects are good. Fever continues.
	Narail ...	0.05	
	Bongong ...	0.63	Weather—clear and hot. Prospects of <i>amun</i> crop in the Barh very good. Elsewhere <i>kalai</i> has been very extensively sown and is doing well. The soil is being prepared for the <i>rubbee</i> crops. Public health good. Common rice selling at from 13 to 15 seers per rupee.
	10 Moorsheadabad, " 10 "	Nil	
Lalbagh ...	Nil	Weather—fair and seasonable. Slight rain this week. State and prospects of <i>amun</i> good. Rice selling at from 14 to 25 seers per rupee.	
Kandi ...	Nil		
Jungipore ...	Nil	Weather—very hot. Prospects of <i>amun</i> and other standing crops generally fair. Sowing of <i>kalai</i> in progress, also transplanting of <i>ganja</i> seedlings. Price of rice improving. Fever general.	
11 Dinagepore, Oct. 9 "	0.23		
12 Rajshahye, " 10 "	Nil	Weather—hot and clear. Prospects of <i>amun</i> continue good. Cutting of jute almost finished; outturn under the average of past years. Some cases of cholera reported from Jaldhaka and Dimla thanas of the Nilphamari sub-division. Fever and lung-diseases prevalent.	
Nattore ...	Nil		
Nowgong ...	Nil	Scanty rain. Weather cool except in afternoons. A slight shock of earthquake on night of 8th instant. State and prospects of <i>amun</i> continue very good. Public health fair.	
13 Rungpore, " 10 "	0.88		
Nilphamari ...	Nil	Weather—cloudy with occasional showers. Prospects fair. A very good <i>amun</i> crop expected.	
Kurigram ...	Nil		
Gaibanda ...	0.43	Weather—bright and clear. Crops all good.	
14 Bogra, " 10 "	0.20		
15 Pubna, " 10 "	1.67	Weather—mornings and nights cool; days rather hot. Prospects of <i>amun</i> continue good everywhere in the district. Ploughing operations for sowing of mustard have commenced. Sporadic cases of cholera in thanas Mynaguri and Patgram. Cattle-disease continues in Fallacotta. Public health generally good.	
Serajgunge ...	Nil		
16 Darjeeling, " 10 "	0.63		
17 Julpigoree, " 10 "	1.60		

* For week ending 10th instant.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—contd.			
Eastern Districts.			
Dacca Division.	18 Dacca, Oct. 10 '85	Nil	Weather—clear and hot. Harvesting of <i>aruni</i> paddy going on. <i>Amun</i> and <i>digha</i> paddy and sugarcane doing well. Public health good.
	Manickgunge ...	0.65	
	Munshigunge ...	0.69	
	Naraingunge ...	0.23	Mornings getting cool. Prospects of crops good. Public health good.
	19 Furrudpore, „ 10 „	0.08	
	Madaripore ...	0.65	
	Goalundo ...	0.60	Weather—clear and hot. Prospects of <i>amun</i> paddy promising. Public health not so good as before, but there is no prevalent epidemic. Weather—very close. No rain at Sudder station since 2nd. Prospects of crops excellent.
	20 Backergunge, „ 8 „	1.36	
	21 Mymensingh, „ 9 „	0.11	
	Jamalpur ...	3.90	
Kishoregunge ...	3.12		
Attia ...	3.2		
Netrokona ...	2.18		
Chittagong Divn.	22 Chittagong Oct. 13 '85	0.36	Weather—somewhat hot. Prospects generally fair. Standing crops in some places damaged by grubs. Prices steady. Cholera still reported. General health good. Some rain on the 3rd, since which weather fair and hot. <i>Amun</i> plants reported to have been attacked by insects, and much damage will be done to this crop if rain does not soon set in.
	23 Noakholly, „ 9 „	1.17	
	Fenny ...	1.95	
	24 Tipperah „ 8 „	0.39	Weather—hot and dry. Prospects of all crops good, though more rain would be acceptable. Inundation on the north receding, and the ground is being prepared for cold-weather crops.
	Brahmanbariah ...	0.63	
	Chandpore ...	4.30	Weather—cloudy and sunny with foggy mornings. Harvesting of <i>joom</i> paddy in full swing. Cotton and sugarcane doing well. Lands being prepared for mustard. Fever prevalent.
	25 Chittagong Hill „ 6 „	1.31	
Tracts.			
Hill Tipperah, „ 7 „	1.41	Weather—dry. Harvesting of <i>joom</i> paddy almost over; outturn fair. Prospects of cotton good. <i>Amun</i> paddy in the plains doing well. Public health good.	
BEHAR.			
PATNA DIVN.	26 Patna, Oct. 10 '85	0.15	Weather—generally clear with slight showers on one or two occasions. <i>Bhadai</i> harvest almost completed. Prospects of paddy crop where saved continue good. Fever prevails.
	Dinapur ...	0.37	
	27 Gya, „ 10 „	Nil	Weather—very hot. Rice prospects good, but a shower of rain anxiously awaited everywhere. Health good. Prices stationary.
	28 Shahabad, „ 10 „	0.70	
	Buxar ...	Nil	Weather—days hot, mornings and evenings getting cool. Harvesting of <i>bhadai</i> over. Preparations for <i>rubbee</i> sowings in full swing. Prospects of winter rice fair, but a fall of rain would be beneficial. Fever reported from all subdivisions, cholera from Bhabua and Sasaram, and cattle-disease from the latter only.
	Sasaram ...	Nil	
	Bhabua ...	Nil	
	29 Durbhunga, „ 10 „	Nil	Weather—seasonable. Prospects of paddy continue favourable. Transplanting of tobacco plants progressing. Fields for <i>rubbee</i> sowings are being prepared in places. Prices have slightly fallen. Cases of cholera still reported from the interior.
	30 Mozufferpore, „ 10 „	Nil	
	Hajipur ...	0.61	Weather—fair, occasionally cloudy. <i>Bhadai</i> crops harvested; paddy crop doing well. Deaths from cholera still reported from Sitamarhi; in other parts of the district public health good.
	Sitamarhi ...	0.24	
	31 Sarun, „ 10 „	1.39	Weather—fine and clear with hot sun. Prospects of paddy, especially in the <i>churs</i> , excellent. <i>Chowmas</i> lands are being prepared for <i>rubbee</i> sowings. Sporadic cases of cholera and fever still reported, but on the whole general health good.
	Sewan ...	Nil	
Gopalgunge ...	Nil		
32 Chumparun „ 10 „	Weather—seasonable. <i>Bhadai</i> crops being harvested. <i>Aghani</i> crops promise well. Prices have fallen slightly. Fever and cholera still reported from the interior.	
BAGULDAH DIVN.	33 Monghyr, Oct. 10 '85	Nil	Weather—fine with passing clouds; no rain. Prospects of <i>aghani</i> continue good, but more rain now looked for. <i>Rubbee</i> lands being prepared. Prices steady. Public health good.
	Begusarai ...	0.65	
	Jamui ...	Nil	
	34 Bhagalpore, „ 10 „	Nil	Weather—seasonable. Yield of <i>janera</i> 10 annas in Banka. Prospects of winter crops very good. Some rain required for rice on high lands, and for <i>rubbee</i> sowings. People getting work everywhere. Cholera still prevalent.
	Banka ...	0.20	
	Muddehporeah ...	Nil	
	Sopole ...	0.23	Weather—fine. State and prospects of crops good. <i>Kurthee</i> and <i>kalai</i> coming up well. Fever as usual, and a little cholera.
	35 Purneah „ 10 „	Nil	
	Kissengunge ...	Nil	
	Arrareah ...	0.37	Weather—seasonable; mornings and evenings cool. <i>Kalai</i> has been fully <i>shag</i> . State and prospects of winter rice very good. A few cases of cholera reported from Khurba. Common rice selling at 14 seers, and new rice at 17 seers per rupee at Englishbazar.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
Orissa Divn.	38 Cuttack Oct. 9 '85	0.52	Weather—clear and hot. <i>Beali</i> rice has yielded a fair outturn everywhere except in tracts damaged by sea-wave. <i>Sarad</i> growing well, but requires rain. Common rice selling at 11½ seers per rupee in town. Public health generally good. Arrangements being made for relief of distressed people on the coast.
	39 Pooree, Khoorda " 8 "	0.2 0.11.	Weather—hot with occasional clouds. Second weeding of late <i>sarad</i> paddy going on. Early <i>sarad</i> ripening. Miscellaneous crops doing well. Relief works have begun in the tracts bordering the Chilka owing to the failure of the crops in those tracts from drought. Rain urgently required in some parts of the district. Common rice selling at an average of Calcutta seers 17 seers 15 chittacks per rupee in the Sudder sub-division, and 17 seers 11 chittacks in the Khoorda sub-division. Public health fair.
	40 Balasore, " 9 "	Nil	Weather—clear and warm. <i>Beali</i> ripening and is being cut in places. Prospects of <i>sarad</i> favourable except in parts of Basudebpur and Chandbally where the crop, which met with the sea-waves of the 22nd ultimo, will be partially destroyed. Public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh, Oct. 9 '85	Nil	Weather—seasonable; cloudy since 8th. <i>Bhadai</i> crops being still harvested in certain places. Prospects of rice continue good. A shower of rain will be greatly beneficial to the crops, most of which are in ears. Cholera still lingering in certain thanas. General health good.
42	Lohardugga, " 10 "	0.12	Weather—cloudy without rain. Slight rain wanted. Prospects of winter rice very favourable. Prices steady. Public health generally good.
43	Singbhoom, " 9 "	0.01	Weather—seasonable. A thunder-storm accompanied by heavy rain passed over Chyebassa last night (8th). Prospects of crops continue excellent. Prices easy. Two fatal cases of cholera occurred in the dispensary on the 2nd, no other cases have since been reported. General health good. A few cases of cattle-disease reported from the interior.
44	Manbhoom, " 10 "	0.64	Weather—fine with a few showers. Prospects of winter crops continue good, and weather during the week has been favourable to them. A bumper <i>amua</i> crop expected. Price of common rice fallen to 20 seers. Public health good.

Published for general information.

The mean pressure of the seven days 29.856
The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29.779

The total number of hours of bright sunshine 67.0
The maximum possible number of hours of sunshine 82.4

The mean temperature of the seven days 83.4
The average temperature of the corresponding period for 24 years, S. G.'s Office ... 82.9
The extreme variation of temperature 14.8
The maximum temperature 90.0

The highest velocity of the wind in one hour 10
Miles.

The highest pressure of wind on one square foot Not measureable.
lbs.

The mean relative humidity 81
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 81
%

The total fall of rain from 4th to 10th October 1885 Nil
The average fall of the corresponding period for 24 years, S. G.'s Office... .. 1.90
The total fall from 1st January to 10th October 1885 62.11
The average fall of the corresponding period for 24 years, S. G.'s Office 61.36
Inches.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newmann's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

Δ dew.

N.B.—In the weekly report from 27th September to 3rd October 1885, in the column of mean pressure read 29.872 inches as the mean pressure of the 30th September instead of 29.72 inches.

METEOROLOGICAL AND RAINFALL SUMMARY OF THE PROVINCE OF BENGAL FOR THE MONTH OF SEPTEMBER 1885.

THE normal meteorological conditions in Bengal during the earlier parts of September resemble those of July and August to a very great extent. The month is, as a rule, one of steady monsoon rains, brought certainly during the earlier parts of the month by both branches of the monsoon current; but towards its close, as the Bombay current very rapidly falls off in strength, the rainfall is then to a great extent, if not almost, entirely brought up by the Bay of Bengal current. This latter current also falls off in strength during almost the whole of September, and towards its close the diminution of the wind velocity becomes very marked. The rainfall for the month is therefore very decidedly lighter and rather more irregular than in the two preceding months, and though during the prevalence of the Bombay branch of the current the distribution of the rainfall will be very similar to that in July and August, with the cessation of the Bombay current the distribution of the rainfall alters somewhat, the rainfall being then due to the action of the Bengal current alone, and at this time usually the increased precipitation in the western districts, due to the interaction of the currents to a great extent, ceases. The normal distribution of the rainfall during September is therefore a little more complex than in July and August, as will be seen subsequently.

With the diminution in the velocity of the monsoon current, breaks in the rains during September are much more frequent than in July and August, and their duration is also longer. It is during these breaks or intervals that small cyclonic storms are formed, and it will be seen that the period during which they are being formed being longer, they will have a better opportunity of intensifying, and thus the cyclonic storms formed over the Bay during September may be far more intense than those usually formed during the earlier monsoon months. As these cyclonic storms bring large amounts of rain to the districts which come within their influence, and as the line of country through which they may pass may vary very considerably, they are prominent causes in modifying the rainfall of particular years.

Normal distribution of rainfall.—The actual amount of rainfall in September in Bengal will, however, depend mainly on the strength and the depth or volume of the Bay of Bengal current, and thus in the normal distribution of the rainfall, the areas of heaviest rainfall are the districts in the neighbourhood of the hills of North and East Bengal, and the coast districts of Bengal and Orissa. The average rainfall exceeds 20 inches at the base of the Himalayas in North Bengal. To the north of a line running east and west through Bagdogra the average rainfall exceeds 15 inches, while there is another small area in East Bengal, including Fenny and Noakholly, with an average fall rather more than 15 inches. Between these areas and a curved line including the Northern and Central districts of South-West Bengal, the whole of Behar, except the most northern portions, the Southal Pergunnahs, Chutia Nagpur and the southern and western districts of Orissa, and defined by the stations of Bettiah, Durbhanga, Bhagulpore, Godda, Berhampore, Goalundo, Manickgunge, Bagirhat, Diamond Harbour, Balasore, Kendrapara, and Pooree, the average rainfall varies from 15 to 10 inches, diminishing towards the interior of the country. The greater part of South-West Bengal and Chutia Nagpur fall inside this line and receive amounts varying from 10 to 8 inches, and finally the northern parts of Chutia Nagpur and the greater part of South Behar receive amounts less than 8 inches. The minimum rainfall for the month over the whole Province is to be found in certain parts of South Behar and Chutia Nagpur, and in an area in South-West Bengal including such stations as Magoorah, Bongong, Ranaghat, Kishnaghur and Culna, where at the last-named station the fall is actually smallest, and only amounts to a little more than 6 inches. The explanation of this second curious patch of deficient rainfall appears to be that it is this district which is least under the influence of the normal monsoon current, and that it is not influenced by any of the well-known causes which induce increased precipitation or rainfall.

Meteorology of the month.—At the close of the month of August a small and feeble barometric depression which had formed over South Bengal had moved in a northerly direction into South Behar, and though the depression had become very feeble, there was still a distinct tendency to cyclonic circulation of winds round the central parts of the Province. On the 2nd of September there was a rather rapid fall of pressure in South-West and East Bengal and Orissa, and this having continued on the following day, a distinct area of low pressure was formed over South Bengal. The falling pressure having continued, the two areas of low pressure or feeble barometric depressions became more clearly marked, one having its centre to the east of Calcutta, and the second to the south-west of Bhagulpore, and on the 4th and 5th the southern depression advanced in a northerly direction, and it became absorbed in the low pressure area which existed near Bhagulpore. There was also on the 5th a distinct and rather broad band of low pressure stretching in a north-westerly direction across the Province, the southern limit of the band being at Burrisal, while the northern limit included the station of Purneah. Pressure on this day was largely below the normal, particularly in the districts affected by the low pressure, and at Bhagulpore the defect from the normal was 0.15". The wind system of the Province was of course materially influenced by these conditions, and round the area of low pressure winds circulated cyclonically, the wind directions at almost all the stations in the Province being

affected in this way. Wind velocities were generally light, though with the advance of the depression on the 4th and 5th rather strong winds set in at the southern and western stations. These conditions of course brought moderate to heavy rain to almost all parts of the Province. The area of low pressure which thus occupied almost the whole of North Bengal and surrounding districts continued practically unaltered for the next four days, on some days slightly intensifying, and on others slightly decreasing in intensity, and with its continued existence the wind circulation was unaltered, and thus conditions remained favourable for the production of heavy rainfall over the central, eastern and northern parts of the Province, while at the western stations, and particularly in Orissa and Chutia Nagpur, the rainfall gradually commenced to decrease and became light and local. On the 10th and on the 11th pressure commenced to rise rapidly over the whole Province, the rise being particularly rapid at the northern and eastern stations, and thus the area of low pressure in North Bengal was filled up, and the lowest pressure in the Province was transferred to the western and northern parts of Behar. With the disappearance of the depression the cyclonic circulation of winds also ceased, and the monsoon winds became light and feeble, and were to a certain extent driven back by a westerly current which brought with it fine weather to almost all districts. The weather conditions at this period showed every indication that a well-defined break in the rains had set in over the greater part of the Province, and on the 12th and 13th these conditions remained practically unaltered. On the 14th, however, the wind directions, which had previously become somewhat irregular, showed at the coast stations in the north-west angle of the Bay decided indraught towards the sea area, and these conditions developed on the following day into a distinct, but very feeble, cyclonic storm at the head of the Bay, the centre being probably only a short distance to the south-east of Saugor Island. Around the small depression winds circulated cyclonically as usual, but wind velocities were very light. On the morning of the 16th the storm had moved in a north-westerly direction, and its centre was between Calcutta and Burdwan, and on the 17th it had passed away in a westerly direction and was apparently in Chutia Nagpur, though it had become extremely feeble and could scarcely be detected. During the whole period of its existence the wind circulation accompanying it was feeble, but with its inland advance rather stronger monsoon winds set in over the eastern and southern districts of the Province, bringing up light though fairly general rainfall.

It was at this period that the principal feature in the meteorology of the month occurred, which was the formation of a small but decidedly very severe cyclonic storm in the Bay, and its subsequent passage inland through Orissa and Chutia Nagpur into North Behar and into the south-east portion of the North-East Provinces. The following is the description of the formation of the storm so far as can at present be given from the information which has been received. The description is to a great extent the same as that given in the weekly meteorological report for the 25th instant.

The period from the 11th to the 18th instant had been characterised by comparatively light rainfall over the greater part of the Province, and very light and somewhat irregular winds were blowing during that time over the land area. At the same time, however, strong monsoon winds were blowing in the south of the Bay, the average wind velocity at Galle having been for some days 10 miles an hour and upwards, which indicated a fairly strong monsoon current advancing up the Bay. In the centre of the Bay also at the close of the week winds were comparatively light and of fairly normal direction, except at the Arakan stations, where winds were irregular and in some cases easterly; but on Saturday, the 19th, winds at Akyab and Diamond Island became north-easterly, and wind velocity at the latter station commenced to increase, and at 10 A.M. on this morning a velocity of 22 miles an hour was reported. Pressure also commenced to fall rather rapidly at Diamond Island and Negapatam, and it is probable that on this day the cyclone had commenced to form, the centre, so far as can at present be judged, being probably to the west of the Andaman Islands. On the 20th the indications that stormy weather or a small cyclone had formed in the Bay were more marked, pressure fell moderately at Madras and along the Arakan coast, while wind became south-easterly at Diamond Island and strengthened considerably, the hourly wind velocity for the 24 hours becoming 25 miles, with a velocity at 10 A.M. of 28 miles. Winds also commenced to strengthen at Galle. On this day probably the storm had distinctly formed, and its centre was to the west or perhaps south-west of Diamond Island and towards the centre of the Bay. On the morning of the 21st the indications showed that the storm was advancing in a north-westerly direction, for pressure was rising rapidly at Diamond Island and wind velocity was moderating, while at Akyab wind had become south-easterly. Wind directions along the west coast also altered on this day, and from the light south-easterly winds which were previously blowing, they became north-westerly and northerly at all stations from Dacca down to Coconada. Pressure fell rather rapidly at Masulipatam and less rapidly at False Point, and the indications at this time were by no means clear as to which part of the coast the storm would reach. The 4 P.M. observations of the stations at the head of the Bay and along the west coast, which were called for, and some of which were not received until midnight, showed clearly that the storm was approaching the west coast to the south of False Point, and orders were issued shortly after midnight to hoist the storm signals at the stations in the river, warning the shipping that a cyclonic storm would cross the coast to the south of a line joining Chittagong and False Point. The exact position of the centre of the storm at 10 A.M. of the 21st is a little doubtful, but it was probably in about latitude 17° or 18° N and longitude 87° or 88° E, and it must have been advancing with very

great rapidity in a north-westerly direction; for on the morning of the 23rd, so far as can be judged from the observations which have been received at present, its centre passed immediately over False Point, at about 7-30 A.M., after which it moved in a north-westerly direction, the centre passing to the east of Cuttack and thence through Chutia Nagpur, and on the morning of the 23rd the centre of the storm was apparently not very far from Dehree in South Behar, and probably a little to the south of that station. This represents a movement of about 850 miles in the 24 hours from 10 A.M. on the 22nd to 10 A.M. on the 23rd. On the morning of the 24th the storm had again moved in a northerly direction, and it was probably to the west or south-west of Motihari in North Behar. It was on this day, however, comparatively feeble, and though winds were still cyclonic in direction, the barometric depression had to a great extent filled up. With the advance of the storm to the north of False Point, a second signal was hoisted at the stations in the river, showing that the storm was passing to the north of False Point; and on the morning of the 23rd, as the storm had advanced well inland, the storm signals were lowered.

The barometric depression accompanying the advance of the small cyclone was excessive and most unusual in character. The pressure which has since been reported by the observer at the False Point Observatory was only 27.23 inches at the time when the centre of the storm was over that station, and it would appear that even this pressure has still to be corrected for temperature which will bring it to about 27.1 inches. Such a pressure as this has never hitherto been recorded in one of the cyclonic storms which occur during the rains, and indeed even in the record of such large cyclones as the Backergunge cyclone of 1876, no such low pressure as this has been registered. The cyclone was also accompanied by a storm-wave which caused much destruction to life and property near False Point, and the storm itself has of course caused much damage in some parts of Orissa.

The winds accompanying the small cyclone were undoubtedly very fierce, and the last telegram received from False Point at 10 P.M. on the 21st shewed that the wind velocity was 38 miles per hour. The observations, too, which were taken at Saugor Island on the 22nd, shewed that at 4 P.M. on that day wind velocity was 68 miles per hour, and at 10 P.M. the velocity was 58 miles per hour, while the velocity for the 24 hours from the 21st to the 22nd averaged 30 miles per hour. Saugor Island, too, it will be seen, was at a very considerable distance from the centre of the storm, in all probability the centre of the storm never being nearer than from 120 to 150 miles from that station.

The rainfall which accompanied the small cyclone near its centre, though undoubtedly very heavy, does not appear to have been quite as heavy as is usually the case with such a violent storm. The heaviest rainfalls in the actual path of the storm, of which reports have been received, are on the 22nd instant in the Cuttack district—Dharmasalla 9.20 inches, Jagatsingapore 6.11 inches, Kendrapara 5.50 inches, Jajpore 5 inches (about), and Cuttack 4.67 inches; and in the Balasore district—Bhuddruck 5.40 inches and Balasore 4.15 inches, but of course with the advance of the storm a strong inrush of moist southerly winds set in over the whole Province, bringing rather heavy rainfall to all stations, and from the 22nd or 23rd up to the 25th or 26th, moderate to heavy rain fell in all districts, and in North Bengal and North Behar in particular the rainfall became exceedingly heavy.

After the disappearance of the cyclonic storm pressure increased rapidly, and it became rather largely above the normal. Pressure over the Province also became very uniform, and light and unsteady winds therefore prevailed in all districts, and except in North Bengal, the only rainfall which took place during the last four or five days of the month consisted generally of light local showers.

The main meteorological features then of September have been the formation of three very feeble barometric depressions during the first 18 days of the month, all of which brought up general rain to the greater part of the Province, and particularly to the northern and central districts. These were followed by a few days of comparatively light winds and light rainfall, and then by the sudden rush of the extremely violent cyclonic storm through the western districts as previously described. This was followed by powerful southerly moist winds, and these by a gradual increase of pressure and falling off of wind velocity, which caused a very rapid diminution in the area and amount of rainfall.

The variations of pressure from the normal during the month have of course been large, and in particular with the advance of the small and fierce cyclone the variations became excessive. During the earlier part of the month pressure was almost uniformly below the normal, but at the latter end of the month, and particularly after the disappearance of the storm, pressure became somewhat largely above the normal, so that the average pressure for the month over the whole Province has been an excess above the normal of 0.038". The excess pressure has also been fairly evenly distributed.

Temperature has on the whole been distinctly lower than usual, this being due probably to the heavy rain which has fallen over the whole Province, and also to the fact that cloud proportion has generally been somewhat higher than usual. The variations of the average temperatures of the various meteorological districts from the normal are not as a rule very large, but all districts, except Orissa, show a temperature below the normal. The largest variation from the normal is in North Behar, where temperature was in defect by 1.6°, while in Orissa the excess was 0.8°. The mean variation from normal temperature over the whole Province is a defect of about 0.6°.

The causes which have led to the heavy rainfall over the whole of the Province have already been discussed in the meteorological summary. The time distribution during the month has also been briefly described, and it will be seen that, except during the

last four or five days of the month, and for the period of two or three days previous to the occurrence of the small cyclone which passed into Orissa, there have been no general or decided breaks in the rains, and thus all districts have received general and rather heavy rainfall for the greater part of the month. The distribution has, however, been somewhat irregular, and, speaking generally, the northern and eastern districts show the largest excess, while the western and southern districts have received falls not so largely in excess. The distribution is too irregular to describe the actual fall over the Province in detail, but it may be said that the usual areas of maximum rainfall in the neighbourhood of the hills and along the coast line are clearly perceptible, and that, starting from the district at the foot of the hills where the rainfall has been from 20 to 30 inches, the rainfall gradually decreases towards the west and south of the Province till over the south-western parts of South-West Bengal, and over a large part of Orissa and Chutia Nagpur, the average rainfall has only been between 5 and 10 inches. Compared with the normal fall, about four-fifths of the Province shows a fall very decidedly in excess, and it is practically only the south-western districts of the Province which are included in the defective area. Thus the only part in which the rainfall has been in defect in North Bengal, is a part of the Cooch Behar district; and in South-West Bengal, practically the whole of the 24-Pergunnahs and the Hooghly districts, and parts of the Howrah and Burdwan districts, show a defective fall. The southern part of Chutia Nagpur, and particularly the Singhbhum and Maubhum districts, and the greater part of Orissa, has received a fall also decidedly in defect. Only three stations have reported defects of more than 5 inches, and these are Contai, Cox's Bazar and Dihatta; the following stations report defects between 4 and 5 inches:—Baraset and Noakholly; and the following defects between 3 and 4 inches:—Pooree, Diamond Harbour, Calcutta, Bussirhat, Howrah, Serampore, and Cooch Behar. On the other hand about half the Province has received a fall of more than five inches in excess, and this area is included to the north of a line starting from Chumparun, and running in a south-westerly direction to the south of the Sonthal Pergunnahs, where it rises into Rajshahye, and then stretches in a south-westerly direction to Chittagong. Certain districts in the Province have even received falls more than 10 inches in excess of the normal. There is one such district in North Behar represented by the stations Durbhunga, Tajpore and Sitamarhi; another in East Bengal, represented by Kishengunge and Netrokona; while there are also isolated stations with a similar excess, such as Bhagulpore, Darjeeling, Panchbibi, and Bishenpore. The largest excess rainfall at any station is 17.04 inches at Sitamarhi.

Taking up the meteorological divisions, South Behar has received the largest excess rainfall, and the excess here equals 76 per cent. of the normal, next to this stands North Behar, which has received an excess of 72 per cent., North Bengal has received an excess fall of 35 per cent. and East Bengal an excess of 25 per cent. The excess in South-West Bengal generally has been equal to 21 per cent. of the normal, and in Chutia Nagpur it has been 7 per cent., while in Orissa there has been a defective fall averaging 8 per cent. Taking these meteorological divisions as being of equivalent value, the excess over the whole Province has been equal to about 33 per cent. of the normal.

The number of rainy days has also been as a rule decidedly in excess of the normal, and all districts, except Chutia Nagpur and Orissa, show this excess. In North Bengal and North Behar the number of rainy days has been from 3 to 4 in excess of the normal, while on the other hand, in Orissa, the number has been 3 days in defect. Over the whole Province the average number of rainy days has been about fifteen instead of the normal number of fourteen, or about one in excess.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of September in all districts of the Province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third column in a slightly different form. It states as a percentage how much the district rainfall of the month varied in excess or defect from the normal rainfall, and is hence the difference between the numbers in the third column and 100.

Division.	District.	Normal district rainfall, September.	Actual district rainfall, September 1885.	Percentage of actual to normal rainfall.	Percentage excess (+) or defect (-).

The mean temperature of the seven days		84.6
The extreme variation of temperature		16.2
The maximum temperature		93.0
The mean relative humidity		75%
The total fall of rain from 4th to 10th October 1885		Nil
The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.					

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 12th October 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

Meteorological Report of the Province of Bengal

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 12th October 1885.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 9TH OF OCTOBER 1885.

In the report for the week ending the 2nd of October, it was noticed that at the end of that week all the meteorological conditions which were present were those of the transition period which generally marks the gradual closing of the south-west monsoon or rainy season, and which is preliminary to the commencement of the north-east monsoon. This transition period may be generally said to occupy some three weeks or a month, and during this time winds are light and rather variable in direction, pressure gradually increases, the day temperatures also remain rather high, while the night temperatures fall, and rainfall rapidly diminishes in quantity, and also in the area over which it falls, and only light and local showers are generally reported. The conditions during the present week have fully borne out the suggestion made in last week's report, and the week has been typical of the transition period above alluded to. Winds over the whole Province for the week have been particularly light, and for the earlier part of the week, except in North Bengal, the province was practically rainless. For a considerable part of the week the winds were also decidedly irregular in direction, though there has been a tendency of the winds to become more strongly westerly, and in some cases north-westerly at the western stations. At the eastern and some of the northern stations, however, winds continued southerly, easterly, and in some cases south-easterly, and towards the close of the week these wind systems set up a faint tendency to a cyclonic circulation, and this slightly disturbed atmospheric condition caused rain showers to be a little more numerous at the close of the week than at the commencement. Throughout the week, however, winds have been exceedingly feeble in force, and on the whole winds have been more westerly and northerly than during the previous week.

Pressure during the previous week was above the normal by an average of about a tenth of an inch, and the distribution of the excess was very fairly regular. During the present week the changes of pressure have on the whole been decidedly regular and of the usual oscillatory character, and though of course there have been a few local irregularities, it may be said that the pressure over the Province generally decreased on the Saturday, increased on the Sunday, and again decreased on the Monday. There was then a rise of pressure lasting for two days, which was followed by an almost corresponding fall for the same period. The actual average pressure for the week has therefore not varied much from the pressure during the previous week, but as the normal movement of the barometer at this time of the year is to increase, the effect of the movements of the barometer this week has been to decrease the abnormal excess pressure which was noticed in the last report, and thus the excess pressure has been reduced to 0.075". The distribution of the excess pressure is not so regular as in the previous week, and while at Durbhanga the excess has been 0.099", at Gya it has only been 0.05".

Temperature, with the almost complete absence of rainfall, and with the lightly clouded skies which have mainly obtained during the present week, has been uniformly high and is in all districts, except East Bengal, decidedly above the normal. Thus in Orissa temperature has on the average been about 2.5° above the normal; in Chutia Nagpur and South Behar it has been about 2° above the normal, while in South West Bengal and North Behar it has been about 1° above the normal. In East Bengal, on the other hand, temperature has been about 1° below the normal. The day temperatures during the week have ranged decidedly high, and at Cuttack a maximum temperature of 100° was reported on the 4th, but this may perhaps be an inaccurate reading, as it is extremely high for October. At Patna on the 4th also a maximum temperature of 95.5° was recorded, and in all districts except Chutia Nagpur, temperatures above 90° have been recorded on several days in the week at several stations. Minimum or night temperatures are, however, decreasing, and some fairly low temperatures have been recorded; thus at Ranchee on the 16th a temperature of 66.4° was registered at Nya Doomka and Julpigoree a temperature of 70° was reported, while in South-West Bengal and East Bengal the lowest minimum reported is about 73°.

Humidity has generally been steadily, but slowly, decreasing throughout the week, and at its close the air was dry at the western stations generally, though in other cases the humidity was still fairly high. The amount of cloud too has rapidly diminished, and the average cloud proportion for the week shows that the sky has been only lightly clouded in all districts.

Rain, as before stated, has been practically absent for the greater part of the week over the whole Province, and the only day on which anything like light general rain fell over any large area was on the 9th. The rainfall, as may be expected, has been rather more frequent, though still in most cases very light, in the hill districts of North Bengal; but the extremely scanty nature of the rainfall over the Province generally may be best seen from the fact that the average number of rainy days at all the stations over the Province for the week has been equal to 0.6, while the average amount of rain which has been received is equal to less than a quarter of an inch. Even in Chutia Nagpur, which has received the largest rainfall, the average amount received has only been 0.42 inch; in North Bengal it has been 0.37 inch, while in South-West Bengal, East Bengal and South Behar the average amount received has been about two-tenths of an inch, and in North Behar it has been little more than a tenth of an inch. Finally in Orissa rainfall has been practically absent:

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 9th of October 1885 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.							
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

METEOROLOGICAL OFFICE, BENGAL;
The 12th October 1885.

ALEXANDER PEDIER,
Offg. Meteorological Reporter to the Govt. of Bengal.

MEMORANDA.

DURING the week ending 26th September 1885, the returns from the principal Municipalities in Bengal furnished the following results:—

1. That births and deaths were registered in the proportions, respectively, of 27·8 and 42·6 per 1,000 of population, against 26·4 and 37·4 per 1,000, respectively, during the preceding week ending 19th September, indicating an advance in the registration of both events, particularly of deaths.

2. That these events were returned in the highest proportions from the following Municipalities:—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Bhagulpore	55·2	Bhagulpore	97·7
Beauleah	44·6	Gya	75·1
Gya	41·7	Patna	66·9
Chittagong	37·6	Jessore	61·2
Naraingunge	37·3	Serampore	59·0
Arrah	37·1	Arrah	58·4
Chupra	35·2	Monghyr	44·3
Patna	34·7	Suburbs of Calcutta	42·4
Durbhanga	34·6	Beauleah	39·4
Serampore	33·4	Puri	37·8
				Chupra	34·2
				Darjiling	32·6
				Midnapore	31·0
				Hughli	30·9
				Durbhanga	30·7
				Burdwan	30·5

3. That the rates at which the several death-causes proved fatal, in comparison with the rates of the preceding week, were—

				Ratio per mille during the weeks ending—	
				26th September 1885.	19th September 1885.
Cholera	3·0	2·0
Small-pox	·03	·2
Fever	20·2	17·9
Bowel-complaints	6·4	6·8
Injury	·8	·4
Other causes	12·1	10·1

The above figures denote chiefly that there was a considerable increase of mortality from cholera, fever, and the diseases grouped under the head of "Other causes," prominently from fever.

4. That referring to the death-causes above indicated, while the casualties from small-pox and injury were not large anywhere, the rest of them proved conspicuously fatal to life in the following Municipalities:—

Cholera.		Fever.		Bowel-complaints.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Arrah	21·5	Jessore	55·1	Serampore	19·6	Puri	23·1
Gya	10·9	Bhagulpore	50·7	Bhagulpore	13·6	Bhagulpore	22·6
Bhagulpore	8·1	Beauleah	36·8	Patna	10·7	Midnapore	20·1
Patna	3·9	Gya	35·5			Darjiling	19·6
		Patna	34·4			Gya	17·1
		Serampore	27·5			Chupra	16·6
		Arrah	23·9			Patna	16·5
		Monghyr	21·7			Suburbs of Calcutta	14·9
						Serampore	11·8
						Dacca	11·0

5. That the death-rates in relation to Sex, Class and Age were returned at the rates indicated below:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	43·3	Christians	34·8	Under 1 year	394·4
Females	41·9	Hindus	45·7	1 and under 5 years	75·4
Ratio of male deaths to every 100 female deaths	117	Mahomedans	35·8	5 " 10 "	31·0
		Other classes	36·4	10 " 15 "	19·5
				15 " 20 "	25·1
				20 " 30 "	23·0
				30 " 40 "	22·3
				40 " 50 "	26·6
				50 " 60 "	47·0
				60 years and upwards	90·4

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 12th October 1885.

Notes.—The number of the natives of the Europeans in the Darjiling Municipality was recently taken as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives of the Europeans in the other municipalities was not taken in the same manner. The ratio under which have been omitted, inasmuch as the census of the Europeans in the other municipalities was not taken in the same manner. The ratio under which have been omitted, inasmuch as the census of the Europeans in the other municipalities was not taken in the same manner.

General Remarks on the fluctuation of principal staples carried over the East Indian Railway during 5 weeks ended 29th August 1885.

INCREASES.

Piece-goods.—The increase under this head was due to active demand at Cawnpore, Delhi, and other long distance stations.

Wheat.—This increase was due to good demand for export.

Gram and Pulses.—The increase in these commodities is attributable to partial failure of the rice crop in Bengal. Despatches were principally made from Cawnpore and other stations on the North-Western Provinces to Howrah, Ranegunge, and Barak.

Other grains.—This increase was due to considerable despatches having been made this year from Cawnpore and stations on the North-Western Provinces to Dinapore and neighbourhood.

Railway Material, Foreign.—As in July 1885, the increase under this head was principally due to despatches for the Cawnpore-Kalpi, Bilaspore-Katni, and the Oudh and Rohilcund Railways.

Salt.—This increase was chiefly due to despatches from Howrah to Patna, Jounpur city, and to the Bengal and North-West Railways.

Seeds.—There was an increase in weight in the despatch of seeds of all kinds, and a decrease in the earnings; the former was due to strong demand for linseed for export, and the latter to short distance traffic.

Sugar (refined and unrefined).—The increase in this commodity was chiefly due to despatches of date sugar from Howrah to the North-Western Provinces stations and Punjab.

DECREASES.

Coal and Coke.—There was an increase in the upwards and a decrease in the downwards coal and coke traffic: the former was due to increased demand from Foreign Railways, and the latter, in a great measure, to interruption of work in the collieries by heavy rain.

Cotton.—Due to want of demand for export.

Rice (husked and unhusked).—The decrease in these staples was due to partial failure of the crops and scarcity in Bengal.

Saltpetre.—The slight decrease in this staple was due to a decline in prices at the commencement of the period.

ALLEN MEARER, *Deputy Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, the 9th October 1885.

Weekly Return of Traffic Receipts on Indian Railways.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 17th October 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIVS.	1 Burdwan, Oct. 17 '85	0.3	Weather—hot. Harvesting of <i>aus</i> continues. Prospects of <i>amun</i> good. Price of rice 12 to 16½ seers per rupee. Health generally good.
	Culina ...	0.65	
	Cutwa ...	0.75	
	Raneogunge ...	0.24	
	2 Bankoora, " 17 "	Nil	Weather—warm and sunny with cool nights and mornings. Prospects of winter rice excellent. The year appears to be exceptionally good for cultivators, who expect to reap a bumper crop, while high price prevails over the district. General health good.
BURDWAN DIVS.	3 Beerbhoom, " 17 "	0.48	Weather—seasonable. Prospects of rice crop continue excellent. <i>Aus</i> crop being cut in a few places. Price of rice falling. A few cases of cholera.
	Rampore Haut ...	3.19	
	4 Midnapore, " 17 "	0.16	Weather—nights cooler, days still hot. Prospects of crops good outside the flooded area. Fever prevalent, and a few isolated cases of cholera reported.
	5 Hooghly, " 17 "	0.47	Weather—cloudy with showers. Prospects of crops good except in those parts of the district which have suffered from the recent floods. Fever and cholera prevalent in some parts.
	Howrah, " 19 "	0.70	Weather—very hot. What crops remain are doing well. Preparations for planting <i>boro</i> going on. Health good.
<i>Central Districts.</i>			
PRESIDENCY DIVS.	6 24-Pergha, Oct. 19 '85	1.17	Prospects of <i>amun</i> rice fair except in low and inundated tracts. Harvesting of <i>aus</i> over. Lands being prepared for cold-weather crops. Public health fair.
	7 Nudda, " 17 "	0.48	Weather—seasonable. Sowing of winter crops going on, and prospects of those already sown very good. Public health generally good.
	Kushtia ...	3.13	
	Meherpore ...	1.86	
	Chandanga ...	0.97	
PRESIDENCY DIVS.	8 Khoolna, " 17 "	0.45	Weather—hot and latterly cloudy with some rain. <i>Amun</i> paddy on high land in flower; the crop is doing well everywhere, except in places touched by flood in thanna Kularoa and parts of Satkhira and Magura. Prices continue high. Public health good.
	9 Jessore, " 17 "	Nil	Weather—fine, clear. Flood-waters fast receding. Prospects of <i>amun</i> good except in Bongong. Sowing of <i>rubbee</i> crops commenced. Public health good except in Jhenida, where fever still continues.
	Jhenida ...	0.21	
	Magurrah ...	0.81	
	Narail ...	0.31	
RAJSHAHY DIVS.	10 Moorshedabad, " 17 "	0.19	Weather—hot with occasional showers. Prospects of <i>amun</i> crop in the <i>Rar</i> excellent. <i>Kalai</i> extensively sown and doing well. Ground being rapidly prepared for <i>rubbee</i> crops. Public health fair. Common rice selling at 14 to 15 seers the rupee.
	Lalbagh ...	1.30	
	Kandi ...	2.67	
	Jungipore ...	0.79	
	11 Dinagopore, Oct. 16 "	Nil	Weather—fair and seasonable, but still hot. State of crops very good; but another strong shower will be required in the course of the next fortnight. Average price of rice 17 seers per rupee.
RAJSHAHY DIVS.	12 Rajshahye, " 17 "	0.48	Weather—seasonable. Prospects of <i>amun</i> and other standing crops generally fair. Cutting of jute continues. Sowing of <i>maskalai</i> proceeding vigorously. Fever general.
	Natore ...	1.50	
	Nowgong ...	Nil	
	13 Rungpore, " 17 "	Nil	Weather—clear and dry. Prospects of <i>amun</i> good. Lands are being ploughed for mustard and potato. Fever prevalent in the head-quarters sub-division. No epidemic reported.
	Gaibanda ...	0.56	
RAJSHAHY DIVS.	Kurigram ...	0.05	
	Nilphamari ...	Nil	
	14 Bogra, " 17 "	0.50	The week has been rather hot. Three shocks of earthquake took place on the 16th. State and prospects of <i>amun</i> crop continue to be very good. Public health fair.
	15 Pubna, " 17 "	1.26	Weather—partly fair and partly cloudy. Winds variable. Prospects of <i>amun</i> crop good. Public health fair.
	Serajgunge ...	Nil	
RAJSHAHY DIVS.	16 Darjeeling, " 17 "	0.06	Weather—still wet and temperature high. Crop all good.
	17 Julpigoree, " 17 "	0.07	Weather—seasonable. Prospects of winter crops good. Common rice sells at 15 seers per rupee at the head-quarters. Public health good.
<i>Eastern Districts.</i>			
DACCA DIVISION.	18 Dacca, Oct. 17 '85	0.39	Weather—clear and hot. Harvesting of <i>ashini</i> paddy nearly completed; <i>roach</i> and <i>amun</i> paddy and sugarcane doing well. Cutting of jute nearly at an end. Lands being prepared for mustard seeds and other winter crops. Public health good.
	19 Furreedpore, " 17 "	0.20	Weather—hot and still. Prospects of crops good. Some fever about.
	Madaripore ...	1.53	
	Gosaindo ...	3.15	
	20 Backergunge, " 15 "	2.12	Weather—clear and hot with occasional showers. Prospects of <i>amun</i> paddy favourable. Public health fair.
DACCA DIVISION.	21 Mymensingh, " 16 "	0.71	Cold weather set in. Rivers falling rapidly. Prospects of growing crops good. Ground being prepared for mustard and other winter crops.
	Jamalpur ...	1.08	
	Kishoregunge ...	1.52	
	Attia ...	0.43	
	Netrokona ...	2.21	

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.— <i>concl.</i>			
<i>Eastern District—contd.</i>			
CHITTAGONG DIV.	22 Chittagong Oct. 20 '85	1.58	Weather—somewhat hot. Prospects generally fair. Standing crops damaged in some places by grubs. Prices steady. Public health good.
	23 Noakholly, Fenny " 16 "	7.38 0.80	Heavy rain on the 13th and 14th. Sky clear again. Rain has done much good to <i>aman</i> crop. The sub-divisional officer reports "damaging of the crops by insects called <i>ladha</i> is somewhat less than last week." Public health good.
	24 Tipperah " 15 "	1.42	Weather—hot and close. Prospects of crops good. Ploughing for cold-weather crops progressing actively, and sowings in some places commenced. Some cases of fever, public health otherwise good.
	Brahmanbariah " " "	1.98	
	Chandpore " " "	0.40	
	25 Chittagong Hill Tracts. " 13 "	0.07	Weather—cloudy, especially on 12th and 13th, otherwise sunny. Days very hot. Fogs in the morning. <i>Joom</i> crops nearly reaped. Prospects of cotton and sugarcane good. Mustard lands under preparation, as well as lands for winter crops, viz. tobacco and other vegetables.
	Hill Tipperah, " 14 "	0.98	Weather—cloudy. <i>Aman</i> paddy doing well. Prospects of <i>tit</i> and sugarcane fair. Public health good.
BEHAR.			
PATNA DIV.	26 Patna, Oct. 17 '85	Nil	Weather—clear. Prospects of paddy crop where sown good; fields being prepared for sowing <i>rubber</i> crops. Fever prevalent all over the district.
	27 Gya, " 17 "	Nil	No rain anywhere during the week. Some showers much needed for <i>khareef</i> and <i>rubber</i> sowings; otherwise prospects good. Health fair. Prices almost stationary.
	28 Shahabad, " 17 "	Nil	Weather—days hot; mornings and evenings getting cool. <i>Rubber</i> sowings proceeding. Prospects of winter rice promising, but rain is wanted. Fever reported from the Buxar and Sasseram sub-divisions, and cholera also from the latter.
	Buxar " " "	0.02	
	Bhabhna " " "	Nil	
	Sasseram " " "	Nil	
BRAHMPUTRA DIV.	29 Durbhanga, " 17 "	Nil	Fine clear weather. Paddy crop in excellent condition except in tracts where damage has been done to it by the late floods. On high lands it stands in need of more water. Fields for <i>rubber</i> sowings are being prepared. Prices stationary. Cholera still continues in the Madhubani sub-division.
	30 Mozufferpore, " 17 "	Nil	Weather—warm; seasonable. Prospects of rice promising. Harvesting of <i>bhadai</i> almost completed, and land is under preparation for <i>rubber</i> sowings. Mortality from cholera still reported from the Sitamarhi sub-division; public health in other parts of district good.
	Sitamarhi " " "	Nil	
	Hajipur " " "	Nil	
	31 Saran, " 17 "	Nil	Weather—seasonable. Standing crops looking well. Fields being prepared for <i>rubber</i> sowings. Sporadic cases of cholera and fever reported, but on the whole general health good.
	Sewan " " "	Nil	
BRAHMPUTRA DIV.	32 Champaran " 17 "	Nil	Weather—seasonable. Harvesting of <i>bhadai</i> crops nearly completed. Prospects of <i>aghami</i> crops continue good. Prices of food-grains have fallen slightly. Public health generally good.
	33 Moughyr, Oct. 17 '85	Nil	Weather—fine with passing clouds. Prospects continue good, but rain is much wanted; the high land rice is said to be drying up for want of it in the Jamui sub-division. Prices steady. Public health good.
	Begusserai " " "	Nil	
	Jamui " " "	Nil	
	34 Bhagulpore, " 17 "	Nil	Weather—fine; warm; rather cloudy. Crops on the ground doing well, but rain wanted for <i>dhan</i> on high land. Much cholera still about.
	Banka " " "	0.38	
BRAHMPUTRA DIV.	35 Purua, " 17 "	Nil	Weather—fair and cool. Prospects of crops good. Cold-weather crops promising well. Some fever and a little cholera in a few places; public health otherwise good.
	Kissengunge " " "	0.05	
	Arrareah " " "	Nil	
	36 Maldah " 17 "	0.35	Weather—fine and hot. Prospects of winter rice and <i>kalai</i> continue good, but would be better for some more rain. A few cases of cholera reported from Khurda and Ratna thanas. Coarse rice selling at from 12 to 18 seers per rupee.
	37 Sonthal Pergas, " 17 "	Nil	Weather—variable in the early part of the week, but now settling fair. Prospects of <i>dhan</i> excellent everywhere. <i>Rubber</i> sowings progressing most favourably. Prices falling. General health fairly good, but fever prevalent.
	Deoghur " " "	Nil	
ORISSA.	Godda " " "	Nil	
	Rajmehal " " "	Nil	
	Jamtara " " "	Nil	
	Pakour " " "	1.67	
	38 Cuttack Oct. 16 '85	0.39	Weather—hot and cloudy. Reaping of <i>beali</i> completed. Early <i>sarad</i> in ear; late <i>sarad</i> doing well, but requires rain. Common rice sells at 11 seers per rupee in town and 15 seers in average in the interior. Public health generally good.
	Pooree, " 15 "	1.02	Weather—hot with occasional showers. Second weeding of late <i>sarad</i> paddy still going on. Early <i>sarad</i> ripening. Miscellaneous crops doing well. Prices stationary. Public health good.
ORISSA DIV.	39 Khoorda " " "	0.20	
	40 Balasore, " 16 "	Nil	Weather—clear and warm. <i>Beali</i> crops are advancing towards ripeness, and have been reaped in some places. Prospects of rice crop good except in places visited by sea-waves. Public health generally good.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh. Oct. 16 '85	Nil	Weather—bright and clear; unusually warm. Rain much wanted in part district, elsewhere prospects of rice and other crops continue good. abating; fever reported; general health otherwise good.
42	Lohardugga. „ 17 „	Nil	Weather—hot and cloudy. Prospects of winter crops continue fair. Prices steady. Slight rain much wanted for rice crop on high land. crops reaped and harvested; outturn estimated at 14 annas in the head-sub-division, and in Palamow 10 to 12 annas. Public health generally good. Sporadic cases of cholera and fever reported from Palamow.
43	Singbhoom. „ 16 „	1.32	Weather—getting cooler daily. Prospects of crops excellent everywhere. easy. General health good.
44	Manbhoom. „ 17 „	0.11	Weather—seasonable. A shower of rain would do good to crops on high Govindpore. On the whole, however, prospects are excellent, and a 12 anna <i>aman</i> crop is expected. Common rice sells at 20 seers per rupee.

Published for general information.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 19th October 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 16TH OF OCTOBER 1885.

The past week has again been one of comparatively little importance from a meteorological point of view. The characters of the meteorological elements have been almost entirely those of the transition period which marks the close of the south-west monsoon, and ushers in the north-east or cold-weather monsoon. The week has therefore mainly been one of light winds, comparatively high day temperatures, slowly reducing night temperatures, reducing humidity and cloud proportion, together with occasional light rain showers in the southern, south-western and eastern districts.

The only abnormal feature, if it may be called such, for it is one which frequently occurs in October, has been the occurrence of a small cyclonic storm in the Bay, which affected the weather in Orissa, South-West and East Bengal for two or three days in the middle of the week. The small storm can be traced back probably as far as Saturday the 10th, when pressure was falling somewhat rapidly off Madras, and the wind directions along this coast apparently showed a tendency to cyclonic circulation. The small depression was probably forming on this day, and its existence was shown by a fairly strong indraught at the entrance of the Bay, but at this time, and throughout the whole of its existence, the storm remained comparatively feeble. The disturbed conditions continued almost unaltered off Madras on the 11th, and then the storm apparently moved in a northerly direction almost parallel to the coast line, and on the 12th the centre was off Vizagapatam. The depression on this day had distinctly deepened, but the winds at the coast stations continued comparatively feeble. On Tuesday, the 13th, the small storm was apparently advancing along the coast nearly opposite to Gopalpore, and on this day it slightly intensified, and by the following morning (the 14th) it was to the east of False Point, and was still advancing in a north-easterly direction. As the storm was thus advancing near the Sandheads, at daylight on the 14th orders were issued to the stations in the river to hoist storm signal No. 7, indicating the probable passage of a small cyclonic storm in a northerly direction to the east of Saugor Island and to the west of Chittagong. From reports subsequently received, it would appear that very bad weather prevailed at the Sandheads on this day, but the wind velocities at the coast stations continued comparatively small. The small storm continued its north-easterly advance, but pressure commenced to rise rapidly, and in its approach towards the land the depression commenced to fill up, and by the 15th it had become a shallow depression only, attended with light wind, and it was passing over the land area between Saugor Island and Chittagong. On this day, therefore, at about midday, the storm signals were lowered.

Winds, however, still continued to circulate cyclonically round the head of the Bay, even after the barometric depression over the land had disappeared. A peculiar feature of this storm was the extreme slowness of its movement, and the comparative lightness of the winds at the coast stations. Over the sea area, however, probably winds were strong, and, judging from the movements of the upper strata of the atmosphere, the indraught towards the centre of the storm was rather intense. Another point in connection with the storm was the comparative absence of heavy rain, and it would appear from theory that this is precisely what might be expected in a storm like that above described. On Friday, the 16th instant, these disturbed conditions had almost entirely passed away, and weather was fine all over Bengal and also apparently over the whole Bay.

During the continuance of the above conditions and the advance of the storm, round which there was of course the usual cyclonic circulation of winds, weather in Orissa, South-West and East Bengal also became disturbed, and light rain showers became comparatively frequent in these districts; but in Chutia Nagpur, North and South Behar and North Bengal, which were practically not under the influence of these disturbed conditions, weather has been fine almost throughout the week, and, with the exception of a few insignificant showers, rain has been absent for the whole of this period.

The variations of pressure for the week have been of little importance. At the commencement of the week it was distinctly, but slightly, above the normal in all districts, but on the Saturday pressure fell slowly at most stations. On the Sunday there was a somewhat rapid rise over the greater part of the Province, and on Monday, the 12th, pressure generally fell, the fall being largest at the Orissa stations. From this day up till Friday the variations of pressure were to a great extent dependent on the movement of the storm above described, and thus pressure generally fell slowly, though of course at the inland stations, which were beyond the influence of the storm, the variations were only of the usual oscillatory character. For the week, over the whole Province, pressure has therefore been not far removed from the normal, the average pressure only showing the slight excess of 0.01". The variations at the particular stations also show clearly the effect of the passage of the small storm, and thus, while at Saugor Island and at Cuttack the average pressure of the week has been almost absolutely normal, at Dacca it has been 0.08" above it.

Temperature has continued rather high throughout the week, and this has been again particularly noticeable in the maximum or day temperatures. Very many stations have reported almost daily temperatures above 90°, and at Gya, on the 12th, a maximum temperature of no less than 94.8° was registered. The minimum or night temperatures have not fallen

much during the week, and thus the mean daily temperature for the week has been at almost all stations distinctly above the normal. The average excess temperature in Orissa, Chutia Nagpur and North and South Behar has been nearly 2° ; in South-West Bengal the excess has been about 1° , while in East Bengal the slight average defect of 0.4° is reported.

Except in the three districts—East Bengal Orissa and South-West Bengal—as previously described, rainfall has been practically absent throughout the week. Thus in North Behar absolutely no rain was reported from any station; in South Behar the average fall over the whole Province is only two hundredths of an inch, though in fact the slight rainfall was entirely confined to the Sonthal Pergunnahs district, and in Chutia Nagpur the average fall in all stations was only eight hundredths of an inch. North Bengal has received rather a larger amount and averages 0.34 inch over the whole Province. South-West Bengal has registered an average fall of 0.75 inch, which fell on an average number of 1.8 days. Orissa has received 0.83 inch on an average number of 1.7 rainy days. In both these districts the normal fall for this week is practically two inches, so that they have received decidedly less than half the normal fall; while on the other hand East Bengal has received an average fall of 1.68 inches on 2.1 rainy days, the normal fall for the period being 1.99 inches. This district then alone of the whole Province has received a fall which is approximately normal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 16th of October 1885 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, S. G.'s Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ...

The total fall of rain from 11th to 17th October 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The total fall from 1st January to 17th October 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, p passing temporary showers, t thunder, d dew, lr. lightning reflection, < lightning, g gloomy, = fog, d drizzling rain.

ALEXANDER PERLER,

METEOROLOGICAL OFFICE, INDIA;

For Meteorological Reporter to the Government of India.

Results of the Thermometrical Observations taken at the Meteorological Office, Chowringhee, from 11th to 17th October 1885.

RESOLUTION ON THE REPORT OF THE PORT OFFICER, CALCUTTA, FOR 1884-85.

MUNICIPAL DEPARTMENT—MARINE.

Darjeeling, the 21st October 1885.

RESOLUTION.

READ—

The Annual Report of the Port Officer, Calcutta, for the year 1884-85.

The Report is submitted by Captain Stiffe, who was in charge of the office throughout the year.

2. The desirability of placing the offices of Port Officer and Shipping Master in one building having been frequently pressed on Government, a Committee has been appointed to consider and report on the best way of utilizing for the purpose the space made available in the Customs House by the reduction in Customs operations consequent on the passing of the new Tariff Act, and it is hoped that in this manner a long-felt want may be soon supplied.

3. The strength of the Pilot Service at the close of the year was 61 pilots of all grades, and 24 unqualified mates and leadsmen apprentices. Notwithstanding the small number of pilots, there has not been sufficient business to keep them all fully employed; and, as Captain Stiffe remarks, there can be no doubt that 60 pilots, as recommended by the Committee of 1881, could do the whole work of the Service. The number will be reduced to 60, in accordance with the Committee's scheme, in 1886.

4. Seven leadsmen apprentices passed examinations as first and second mates during the year; and the Lieutenant-Governor is glad to learn that, as a body, they maintain their character for diligence and obedience. The system

of recruiting from the training-ships in England continues to work satisfactorily; but in response to local representations that this system tended to exclude candidates from this country who, though perfectly qualified in every way, were unable to go through the course in training-ships, the Lieutenant-Governor has, with the sanction of the Government of India, issued regulations to provide for such cases. In 1886, one vacancy out of the three expected will be reserved for local candidates; and it is hoped that it will always, in future years, be found possible to appoint some proportion of the new apprentices in this country. The question of providing convenient accommodation for leadsmen apprentices, which has been frequently under the consideration of Government, has now been satisfactorily solved by the renting of two houses at Garden Reach, where most of the unmarried apprentices reside under the superintendence of Mr. Mignon, a retired commissioned officer of the Indian Navy. The young men contribute Rs. 10 each per mensem for the accommodation, and are also required to pay for their own mess. The Government gives a subsidy of Rs. 60 a month. A library is being formed for the use of the resident apprentices, and the open space around the buildings affords suitable recreation. The Lieutenant-Governor learns with satisfaction that these arrangements are working admirably. They are certainly an improvement upon the earlier system, under which the apprentices were scattered all over the town in small lodging-houses.

5. The following statement shows the number of vessels, including both steamers and sailing vessels, visiting the port during the year 1884-85, compared with the previous year:—

	Arrivals.	Departures.	Total.	Total tonnage.	Average tonnage per ship.
1883-84	1,085	1,073	2,158	3,837,196	1,824
1884-85	903	923	1,826	3,475,145	1,902

There was a very considerable decrease in the number of ships. Indeed, with the exception of the year 1879-80, the total is smaller than it has been for the last ten years; and this is no doubt mainly due to the general depression of trade. The average tonnage shows a marked increase, which is common to steamers and sailing vessels. Steamers have steadily increased in size since 1870-71, from an average of 1,300 tons to 2,350 tons. The average tonnage of sailing-vessels has increased in the same period from 1,000 to 1,300. This progressive increase leads to periodical readjustments of the scale of tonnage for pilots; and in January last it was found necessary to raise the scale for all grades below that of Branch Pilot. The present Report shows that, before this new scale came into force, the earnings of Master Pilots had been very greatly reduced, and it is hoped that the change will result in a more equitable distribution of earnings among the different grades.

The average monthly number of vessels piloted by the different grades was as follows:—

Branch Pilots	4.99
Senior Master Pilots	3.02
Junior " "	1.92
Mate Pilots	3.41

Seventeen small vessels were piloted by first and second mate leadsmen in the absence of duly qualified pilots.

6. There were 51 cases of grounding and 17 collisions during the year, against 42 and 14 last year. Damage was caused to only one vessel of the 51 which grounded.

In three of the 17 collisions "no damage" was reported, and in three other cases the injuries were "slight." The percentage of all accidents (3.72) was higher than in any year since 1873-74 (4.05), but most of them were trivial, as is shown by the facts that departmental enquiries were held in only five cases, and that only one pilot received any substantial punishment for neglect of duty.

7. Besides the five departmental enquiries already mentioned, one Marine Court for the trial of Pilots was assembled; but the pilot was acquitted. Four Special Courts of Enquiry were also held to enquire into the following matters:—The stranding of the emigrant steamer *Laleham*; the collision between the *Star of Italy* and the *Coleroon*; the stranding of the British Indian Steam Navigation Company's steamer *Madras*, resulting in her total loss; and an outbreak of fire on board the light-ship *Mermaid*. The certificate of the Master of the *Madras* was suspended, but the proceedings of the Court were set aside by Government as irregular, and the Master's certificate was returned to him. A departmental enquiry was also held to investigate a charge against a native engine-driver of tampering with the Government safety-valve. The man's certificate was suspended for three months.

8. The pilotage receipts for the year amounted to Rs. 7,39,750, a decrease of Rs. 91,757. Of late years an impression appears to have been gaining ground that the pilotage charges of the port are too high, and that a large surplus is every year credited to General Revenues. Owing to the form in which the accounts were previously kept, this question could not hitherto be cleared up; but during the year under report detailed accounts of all the heads of expenditure which could properly be charged to pilotage for the years 1882-83 and 1883-84 were prepared, with the result that the charges for these two years were shown to have exceeded the receipts by Rs. 10,497. As the charges for 1883-84 were Rs. 8,67,211, it appears probable that there will have been a much larger deficit in 1884-85. The final accounts for the year have not yet been made up.

9. The steamer *Undaunted* was employed during the year, as usual, in supplying the Sandheads with pilots, in carrying the Port Officer on his inspection trips, and in overhauling buoys, recovering and relaying moorings, and other work at the ports inspected. She also made one voyage to Saugor Sand in search of a French barque reported in a dangerous position. The pilot brigs, *Cassandra*, *Coleroon*, and *Sarsuti* are reported to be at present in good condition. It is probable, however, that both the *Undaunted* and the *Cassandra*, which are both over 20 years old, will have to be replaced within the next two or three years.

10. One hundred and fourteen candidates for certificates of competency as sea-going officers were examined during the year. Of these 67 passed. The corresponding figures for 1883-84 were 102 and 57 respectively. Of 21 candidates for certificates as commanders of inland vessels, 11 passed, and one (a steam-tug pilot) was granted a certificate without examination. Six vessels were registered under the Merchant Shipping Act of 1854, and the registry of 11 vessels was cancelled. Three vessels were registered under Act X of 1841. There was a large increase in the number of B certificates granted under the Native Passenger Ships' Act VIII of 1876, in consequence of the orders of Government requiring a new certificate for every voyage, however short.

11. Captain Stiffe administered the Department with his usual tact and ability, for which the acknowledgments of the Lieutenant-Governor are due.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Govt. of Bengal.

YEAR 1884-85.**

FINANCIAL DEPARTMENT—SALT.
Darjeeling, the 21st October 1885.

RESOLUTION.

READ—

The Report of the Board of Revenue on the Administration of the Salt Department for 1884-85.

The following statement compares the financial results of the department in the past two years :—

HEADS.	1883-84.	1884-85.	Increase.	Decrease.
RECEIPTS.	Rs.	Rs.	Rs.	Rs.
<i>Imperial—</i>				
Import duty on salt	1,78,15,875	1,91,89,360	18,73,485
Excise ditto	8,82,118	10,12,212	1,30,094
Total ...	1,81,97,993	2,02,01,572	20,03,579
<i>Provincial—</i>				
Rent of warehouses	60,160	85,245	25,085
Miscellaneous	39,824	39,095	729
Total ...	99,984	1,24,340	24,356
Total Receipts ...	1,82,97,977	2,03,25,912	20,27,935
CHARGES.				
<i>Imperial—</i>				
Salaries, establishments and contingencies ...	9,728	5,824	4,404
Compensation paid under conventions with the French Government	20,000	20,000
Salt Preventive establishment in Orissa ...	15,117	13,109	2,008
Refund of customs duty on salt... ..	1,87,068	2,11,005	24,837
Total ...	2,31,913	2,50,338	18,425
<i>Provincial—</i>				
Salaries, establishments and contingencies ...	18,320	21,048	2,728
Refunds, other than customs and excise duty	65	65
Total ...	18,320	21,113	2,793
Total Charges ...	2,50,233	2,71,451	21,218
Approximate net revenue ...	1,80,47,744	2,00,54,461	20,06,717

The total receipts for the year were Rs. 20,27,935 over those of the previous year, the increase appearing under both "Excise and imported salt" and "Rent of warehouses." The increase in duty is due to larger clearances during the year, while the increased receipts from rent of warehouses are attributed to the state of the market which allowed the salt to remain longer in bond. On the other hand there was a small falling off of Rs. 729 in the receipts from miscellaneous sources. The increase of Rs. 21,218 in the charges is mainly attributable to larger refunds of customs duty on salt.

2. The quantity of salt in stock at the commencement of the year was 20,00,056 maunds against 14,16,637 in 18-3-84. During the year 1,00,50,107 maunds were imported or manufactured, duty was paid on 1,04,09,389 maunds, and 15,41,259 maunds were in stock at the close of the year. Of the stock in hand at the commencement of the year, 14,21,146 maunds were imported, and the remainder was excise salt. The proportion borne by the salt manufactured during the year (4,26,434 maunds), to that imported (96,23,673 maunds), was little over one-twentieth. Of the amount of salt which paid duty, 75,12,724 maunds paid from shipboard, 23,85,409 maunds from bond, and the remaining 5,01,256 maunds was excise salt passed out of bond. The amount in stock at the close of the year consisted of 11,10,199 maunds of seaborne salt, 3,75,835 maunds of excise manufactured salt in bond, and 55,225 maunds of excise manufactured salt in aurungs.

3. Importation was confined during the year to the ports of Calcutta, Cuttack and Chittagong, and there was a net increase of 1,61,075 maunds as compared with the figures of the previous year. Chittagong and Cuttack showed an increase, while Calcutta showed a decrease in the importations. The chief sources of supply were the United Kingdom, Bombay, the Arabian and Persian Gulfs and Italy, no importations having occurred from France and Port Elizabeth. About 10,000 maunds were imported from Saigon. The attempt by Messrs. Ralli Brothers to import Sardinian salt, noticed in the last Resolution, was abandoned during the year under review. The question of reducing the wastage allowance to 3 per cent. by introducing a more careful system of weighment at Liverpool again engaged the attention of Government during the year. It has ultimately been decided to allow the present rates of wastage allowance to remain unchanged, but orders were passed for occasional re-weighment of boat-loads of salt at the Sulkeah Golabs, and this check is said to have worked satisfactorily.

4. The clearances of salt from shipboard increased by 4,95,875 maunds or 7·2 per cent. in Calcutta, and 65,926 maunds or 50·2 per cent. in Chittagong, as compared with the previous year. On the whole, there was an increase of 5,61,801 maunds or 8 per cent. in the total quantity cleared at both ports, and of Rs. 13,78,441 or 10·3 per cent. in the duty realized. There was an additional clearance of 22,042 maunds from shipboard at Chittagong under bond for Naraingunge. The total quantity cleared from bond in all ports amounted to 21,19,010 maunds against 18,24,644 maunds in 1-83-84, and realized a duty of Rs. 42,38,022 against Rs. 36,49,290. Chittagong is gradually becoming established as the port from which all East Bengal draws its salt.

5. The increase which occurred in 1-83-84 in the manufacture of excise salt was not maintained in the year under review, the quantity manufactured having diminished by 2,11,237 maunds. In the 24-Pergunnahs the only manufacturer has found the speculation unprofitable, and has altogether abandoned his business. The decrease in Cuttack is small (5,449 maunds) and calls for no special remarks. In Pooree and Balasore, however, the decreases have been large, amounting to 1,01,491 and 1,04,206 maunds respectively. The falling off in Pooree is attributed to unfavourable weather, and to the large stock left undisposed of at the commencement of the year. In Balasore the business is rapidly falling. The Collector writes—

“The manufacture of Balasore *Pungah* is doomed, if not already dead, as a legitimate business. Knowing how costly is the production of this salt, and how much its legitimate sale has diminished. I cannot believe that it is worked at a legitimate profit even now. Knowing also that illicit manufacture and smuggling are exceedingly easy, and almost absolutely safe, I fear that there is strong ground for believing that the trade is kept up only because it is made very profitable illegitimately.”

Both the Collector and the Commissioner complain of the system under which *Pungah* salt is at present manufactured in the Balasore district, but as the Salt Department in Orissa will shortly be placed under the immediate charge of the Commissioner of Salt Revenue, Madras, which will involve a complete reorganization of establishment, it is unnecessary to discuss the point any further.

6. The increase in the sales of excise salt in Pooree, as compared with the previous year, more than counterbalanced the decrease which occurred in the 24-Pergunnahs, Pooree and Balasore. The net result for all districts was an increase in sales from 4,39,256 to 5,01,255 maunds, and in duty from Rs. 8,78,514 to Rs. 10,02,512. In the 24-Pergunnahs, where the decrease amounted to 1,533 maunds, the local trade is dying out in consequence of the low price at which foreign salt is obtainable, and the gradual removal of the prejudices against its use. The decrease of 17,354 maunds in Cuttack is attributed to the preference shown by the people for *Kurkutah* salt, which was imported in much larger quantities from Pooree than in the preceding year. In Balasore, where the decrease amounted to 20,540 maunds, the local *Pungah* is being rapidly displaced by the cheap and excellent Liverpool salt, and the salt made at Cuttack and Pooree. The increase in the

sales in Pooree, amounting to 1,01,457 maunds, is attributed to the fact of the manufacturers endeavouring to dispose of their large stocks by selling at reduced rates throughout the year in order to prevent the importation of foreign salt.

7. The sales of salt in the portions of the saliferous districts of Bengal and Orissa rose from 10,21,385 maunds in 1883-84 to 10,49,885 maunds during the year under review. The increase occurred in all the districts except Midnapore, where there was a slight falling off of 253 maunds. This decrease is attributed chiefly to partial failure of crops and illicit manufacture. The increase of population, the general prosperity of the people, the influx of labourers from outlying districts, and the repression of illicit manufacture, are set forth as the principal causes which led to the increases in the other districts.

8. The number of seizures in all districts during the year was 384, and the quantity of salt attached was 261 maunds, against 459 seizures and 697 maunds in 1883-84. In 17 cases with 55 maunds, against 22 cases with 546 maunds in 1883-84, the salt was released. Thus the ratio of the quantity released to the quantity attached was 21 per cent. against 79 per cent. in 1883-84, a result which, in the opinion of the Lieutenant-Governor, is satisfactory as tending to show that the people were subjected to very little harassment by the police. The number of seizures and of unsuccessful searches was 427 and 54 against 624 and 102. The proportion between the seizures and unsuccessful searches is satisfactory in all districts except the 24-Pergunnahs, where in 102 seizures, no less than 41 unsuccessful searches were made. The action of the authorities in these cases must have caused considerable inconvenience and loss to the owners, and the Lieutenant-Governor will ask the Commissioner to take means for checking all tendency to injudicious activity. The action of the police in the Tumlook sub-division in not keeping records of unsuccessful searches was highly reprehensible and requires further explanation. The Lieutenant-Governor requests that the Board will call for further particulars on this point.

9. Prosecutions for offences against the salt laws were less numerous than in the previous year. The cases instituted during the year were 959 against 1,304 in 1883-84, and the total number brought to trial (inclusive of the cases pending from the preceding year) was 981 against 1,326, resulting in 930 convictions against 1,128. The districts which show an increase in the number of cases instituted are the 24 Pergunnahs, Khulna and Cuttack. In the 24-Pergunnahs the increase is attributed to illicit manufacture in parts of the Sunderbuns, while in Khulna it is due to the action of the police. It is explained that the time-expired rowanahs in the latter district, which had hitherto been passed from the thanas without examination to the Collector's office, underwent rigorous examination by the thana constables and the salt clerk at the Police office during the year under review, and that, in cases where the period was found to have been exceeded, prosecutions were instituted by the police. Some such action was, no doubt, necessary; but the Lieutenant-Governor entirely agrees with the Board that the work must not be left to subordinate agency without proper supervision. The irritation caused by the multiplication of petty charges against licensees entirely counterbalances the advantages gained by a strict application of the law, and the Lieutenant-Governor is glad to learn that the Collector has been directed to put a stop to the practice. In Cuttack the increase was small and calls for no special remarks. The decreases in other districts seem to afford an indication of increased attention on the part of local officers to the orders of Government in regard to petty cases of breach of license.

10. The amounts realized as fines and disbursed as rewards were Rs. 4,704 and Rs. 3,565, against Rs. 4,985 and Rs. 3,352 in the previous year. Excluding prosecutions for neglect to give up rowanahs, which are generally instituted at the instance of the Board of Revenue or of Collectors, in which the fines amounted to Rs. 651, the percentage of rewards to fines was 76.4 against 66.1. It is reported that the orders of Government regarding the prompt payment of rewards were acted up to in every district concerned.

11. The following table shows the despatches of salt into the interior by the different water routes and railways in the last two years :—

YEAR.	By the Baltikal.	By the Bankrail.	By the Gewakhal.	By the Kidderpore.	By the Ballaghata.	By the East Indian Railway	By the Bengal and Calcutta and South- Eastern Rail- ways, or by Chitpore.	By the Rathallah Ghat
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
1883-84	13,84,238	6,26,398	2,72,664	3,02,077	16,02,072	31,07,711	9,46,565	44,494
1884-85	12,10,000	6,50,369	3,15,791	3,00,254	16,00,548	30,74,064	4,19,150	6,34,894
Increase	-	23,971	42,027	-	74,516	5,10,325	-	5,90,110
Decrease	1,73,338	-	-	20,423	-	-	5,07,167	-

The figures show a net decrease of 58,747 maunds in the quantity conveyed by water, and a net increase of 5,34,328 maunds in the despatches by rail.

12. In the Resolution recorded on the report for 1883-84, it was remarked that the question of placing the manufacture and sale of excise salt in Orissa under the supervision of the Commissioner of Salt Revenue, Madras, would be considered in connection with the special report on the subject that had recently been submitted by the Board. The report has since received the consideration of both the Lieutenant-Governor and the Government of India, and it has been finally settled to place the Salt Department in Orissa under the supervision of the Salt Commissioner in Madras, subject to the control of the Government of Bengal. It remains only to arrange the details for carrying the scheme into effect.

13. The depression of trade and low freights which held out less inducement to clear the salt out of ships for the return cargo, led to a decrease of nearly 5,35,000 maunds in the quantity of salt bonded during the year, the total quantity bonded being 16,61,055 maunds against 21,96,303 in the previous year. The quantity remaining in store at the end of the year was only 9,38,858 against 12,68,875 maunds at the commencement.

14. The Lieutenant-Governor's thanks are again due to the Board of Revenue for their careful administration of the department during the year. The names of the officers favourably noticed by them will be communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal.

J. WARE EDGAR,

Offg. Secretary to the Government of Bengal.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE STAMP DEPARTMENT FOR THE YEAR 1884-85.

FINANCIAL DEPARTMENT—STAMPS.

Darjeeling, the 21st October 1885.

RESOLUTION.

READ—

The Report on the Administration of the Stamp Department for the year 1884-85.

Read also—

The Report for the year 1883-84, and the Resolution recorded upon it.

The Acts under which the stamp revenue of the year was collected were, as in previous years, the Indian Stamp Act I of 1879, and the Court-fees Act VII of 1870. No change was introduced either in the description of stamps or in the system under which they are supplied to the public.

2. The question of the form and size of the stamped paper to be used for the realization of copying-fees in the civil and criminal courts engaged the attention of Government during the year. It has been pointed out that there will be a considerable saving in cost if impressed non-judicial stamps of the value of four annas are substituted for the two-anna paper now used for copies. The four-anna sheets will be of a larger size and contain twice the number of words to be copied, thus reducing the number of sheets to one-half. The proposal being in accordance with the original scheme of the High Court, and having met with the approval of the Board, has been sanctioned by Government, and the new stamps will, it is expected, come into issue from the 1st January next. Another proposal which originally emanated from the agents of certain Insurance offices in Calcutta has for its objects the amendment of the Indian Stamp Act I of 1879, so as to impose a uniform duty on all insurances and re-insurances other than life and marine insurances. The views of the Government of Bengal have been laid before the Government of India, and the whole subject is now under the consideration of the Supreme Government.

3. In the Resolution recorded on the previous year's report, it was remarked that duplicate receipts could not, as desired by the Calcutta Trades' Association, be exempted from stamp duty without involving an amount of risk which was not justified by the necessity of the matter. It was, however, felt that to require two or more stamped receipts in respect of the same transaction, where the duplicates were required merely for purposes of record, would be inequitable; and it was ruled that in Government transactions, instead of duplicate receipts, copies should be taken of the original receipt certified by the payer.

A question of some importance to land-owners in Northern Behar was decided during the year. Two of the documents known as "sharahnams" were submitted for the consideration of the Board of Revenue—one by the Commissioner of Patna, and the other by the Inspector-General of Registration. The contents of the document were in each case a declaration that certain rates of rent were the correct rates for lands of various descriptions given in a particular village, but this declaration was not accompanied by any agreement to pay rent at these rates. The Board held that such documents were not liable to stamp duty, and the High Court, to whom the question was referred for an authoritative decision, have agreed in this view.

Another important question in regard to stamp duty was decided by the High Court. In 1882 the High Court of Madras had ruled that a transfer of leasehold land came within the meaning of "transfer" under article 60(b), schedule I of the Stamp Act, but the order was silent as to whether or not any extra *ad valorem* duty under article 21 of the schedule should be levied in respect of the value of other properties conveyed along with a transfer of the lease. An analogous case occurred in Bengal in 1883, and the Advocate-General gave his opinion that the instruments were chargeable with duty under article 60(b). A firm in Calcutta, on the strength of these rulings, had obtained the Collector's certificate that the stamp duty under article 60(b) on a number of conveyances of tea estates was correct. As it was intended by these instruments to convey also all debts and moveable properties in or upon the lands, besides the mere transfer of the lease,

it was thought that *ad valorem* duty should be charged on the value of such moveables, and the question having been referred to the High Court, it was ruled that, as regards the transfer of the land, the deed should bear the stamp prescribed in clause 2 of article 60 of schedule I of the Stamp Act, but with regard to the other property, full *ad valorem* duty under article 21, schedule I should be charged. After this decision, the firm introduced an alteration in the wording of these transfers, setting forth that the moveable properties had been delivered over beforehand, and that the sole intent of the deed was the transfer of the interest secured by the leases. Documents drawn up in this form increased in number, and the Collector thought that the circumstances required him to decline to certify any deed of the kind unless the full *ad valorem* duty, as for a conveyance, was paid. The matter being referred to by the High Court, they have held that the deed should be regarded, not as a transfer of a lease under clause (b) of article 60, but as a conveyance under article 21 of schedule I of the Act.

5. The financial results of the administration of the Stamp Department during the year are shown in the following table:—

YEARS.	STAMPS UNDER ACT I OF 1879.			COURT-FEES UNDER ACT VII OF 1870.			TOTAL.		
	Receipts.	Refunds and other charges.	Net revenue.	Receipts.	Refunds and other charges.	Net revenue.	Receipts.	Charges.	Net revenue.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1880-81	32,38,172	1,68,063	30,46,119	81,53,468	3,27,144	78,30,321	1,13,91,637	6,20,197	1,08,71,440
1881-82	33,22,300	1,02,270	31,20,030	87,01,713	3,46,923	83,54,800	1,20,23,922	5,34,102	1,14,84,820
1882-83	33,58,763	1,89,508	31,70,487	88,54,730	3,40,251	85,06,484	1,22,13,534	5,37,559	1,16,76,975
1883-84	33,83,098	2,04,383	31,78,713	91,85,816	3,46,697	88,07,209	1,25,70,014	5,00,992	1,19,85,022
1884-85	31,57,090	2,13,680	32,44,301	93,33,201	4,32,348	91,00,813	1,29,91,191	6,46,077	1,23,45,114

The gross revenue collected under the two Acts, I of 1879 and VII of 1870, was Rs. 1,29,91,191 against Rs. 1,25,76,914 in the previous year, giving an increase of Rs. 4,14,277. Both classes of stamps, judicial and non-judicial, contributed to this increase, the receipts exceeding those of any previous year. As in previous years, the receipts were highest in Calcutta (Rs. 19,24,737) and lowest in Singbhoom (Rs. 6,427). The total charges under both the Acts amounted to Rs. 6,46,077, and the total net revenue to Rs. 1,23,45,114. The general incidence of stamp revenue on the population of Bengal, estimated at 66 millions, is 3 annas 1 pie per head.

6. The following table shows the receipts from sales of the different descriptions of stamps during the last two years:—

YEARS.	SALES OF NON-JUDICIAL STAMPS OR STAMPS USED UNDER THE INDIAN STAMP ACT.										SALES OF JUDICIAL STAMPS OR STAMPS USED UNDER THE COURT-FEES ACT.				Total of both kinds of stamps.
	Impressed sheets including certificate stamps, customs and salt bond forms, and Public Works Department contract and tender forms.	Impressed labels.	Receipt or revenue stamps.	Share transfer stamps.	Foreign bill stamps.	Hundi or bills of exchange stamps.	Notarial stamps.	Advocate, vakel, and attorney stamps.	Impressed one-anna stamps for cheque, bills, &c.	Total of non-judicial stamps.	Adhesive and impressed court-fee stamps.	Stamps for copies.	Total of court-fee stamps.		
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	
1883-84	22,92,827	6,25,018	1,81,416	46,730	36,817	44,070	3,043	9,200	43,521	53,81,842	40,52,544	3,70,007	40,31,551	1,23,63,433	
1884-85	24,43,393	5,80,917	1,80,046	23,408	34,580	70,560	4,371	10,025	46,797	44,11,920	40,53,519	4,11,627	43,64,946	1,27,79,902	
Increase	1,50,566	5,430	1,328	825	80,114	3,00,955	32,430	3,33,385	4,13,469	
Decrease	36,101	23,322	2,227	14,501	2,724	
Increase per cent. ...	6.5	3	43.6	8.9	2.4	3.4	8.5	8.0	3.3	
Decrease per cent.	5.6	49.9	6	15.4	6.3	

The sales of stamps during the year exceeded those of 1883-84 by Rs. 4,13,469, the increase being shared by all classes of stamps, with the exception of impressed labels, share transfer, foreign bill, hundi, and one-anna impressed stamps. The increase was, however, very unequally distributed, no less than Rs. 3,33,355 being derived from sales of court-fee stamps, while non-judicial stamps show an increase of only Rs. 80,114. The districts which show the most marked improvement are Calcutta (Rs. 57,627), Mymensingh Rs. 55,492), Mozufferpore (Rs. 39,566), and Sarun (Rs. 30,199), while the largest falling off was in Moorshedabad (Rs. 12,769), Backergunge (Rs. 11,873), and Hazaribagh (Rs. 10,370).

7. Among non-judicial stamps, impressed sheets yielded during the year more than two-thirds of the total revenue realized under the Indian Stamp Act. The collections amounted to Rs. 24,43,233 against Rs. 22,92,827 in the previous year, giving an increase of Rs. 1,50,406, or 6·5 per cent. This increase cannot be ascribed to any single predominating cause, although it may, the Board think, be due in some measure to a growing tendency to substitute written agreements for verbal contracts. There was an increase in 32 districts, and a decrease in 13. The increase was most considerable in Mymensingh (Rs. 14,156), Durbhunga (Rs. 11,506), Tipperah (Rs. 11,149) Patna (Rs. 9,417), Backergunge (Rs. 8,878), Furreedpore (Rs. 8,389), Sarun (Rs. 8,099), Mozufferpore (Rs. 7,385), and Calcutta Rs. 7,144). The improvement in Mymensingh is attributed to the execution of a large number of kabuli-yats by ryots, while in Tipperah the receipts were enhanced by increased sales of occupancy rights, the execution of a large number of pottahs and kabuli-yats, and the increase in the number of vakeels and pleaders. The increase in Patna and Furreedpore may be ascribed to greater activity in business transactions, and in Backergunge to the issue of a large number of gun licenses. The increase in Durbhunga, which is proportionally larger than in any other district, is not satisfactorily explained. The Commissioner infers that the high prices of food-grains led to larger sales and mortgages of immovable property; but it would have been more satisfactory to ascertain definitely whether the increase was most marked in these classes of documents. Explanations are also wanting of the increases in Sarun and Mozufferpore. Probably the Commissioner is right in his inference, and the increases in all these districts are referable to the same cause—the financial difficulties of both land-owners and their tenants during the year under report. A decrease in the sale of impressed *labels* led to an increase in the sale of impressed *sheets* in Calcutta, both kinds of stamps being used for the same purpose. In four districts only did the decrease in the sale of impressed sheets exceed Rs. 1,000. These were Bhagulpore with a fall of Rs. 4,635, Sonthal Pergunnahs with Rs. 3,238, Rungpore with Rs. 1,599, and Bogra with Rs. 1,017. The decrease in Bhagulpore is attributed to the unusually large loan transactions of the Banaily Estate in 1883-84. A rather obscure explanation is given of the decrease in the Sonthal Pergunnahs, viz., that it is due to a large decrease in the number of documents presented for registration: this would appear *prima facie* to be an effect rather than a cause, and some further explanation is necessary. The explanation of the decrease in Rungpore is to be found in the fact that the increase in 1883-84 was due to a great extent to the purchase of several stamps of high values for putni leases and sale certificates, while there were no such transactions during the year under review. The decrease in Bogra is said to be due to the failure of crops in consequence of which loan transactions for small sums were effected on the security of ornaments, instead of being recorded in formal bonds. The fluctuations in the other districts are inconsiderable, and need not be noticed.

8. The receipts from impressed labels, which are available only in Calcutta, fell from Rs. 6,25,018 in 1883-84 to Rs. 5,89,917 during the year under review. The causes of decrease assigned by the Collector of Calcutta are—(1) increase in the sale of impressed sheets, both kinds of stamps being, as already remarked, used for the same purpose; and (2) decrease in the number of transactions during the late commercial depression.

9. The sale of one-anna revenue stamps, commonly known as receipt stamps, realized Rs. 1,86,046 against Rs. 1,80,616 in the previous year, giving

an increase of Rs. 5,430 or 3 per cent. Eight districts only show a falling off in receipts, viz. Burdwan, Julpigoree, Jessore, Calcutta, Rajshahye, Bogra, Darjeeling, and Lohardugga. By far the greater part of the decrease occurred in Calcutta, where it amounted to Rs. 6,458. This falling off, however, is for the most part nominal, the place of the adhesive receipt stamps being taken by the impressed one-anna duty denoted on printed skeleton forms of cheques and other documents. In the remaining seven districts the decrease did not exceed Rs. 500. The almost universal increase under this head is attributed to the facilities afforded to the public for the purchase of these stamps through the agency of the post office, and to the better observance of the law in consequence of the increased vigilance exercised by local officers. The Lieutenant-Governor is glad to find that the repeated injunctions of Government have resulted during the past year in real efforts on the part of local officers to enforce this branch of the law; but he cannot doubt that it is still largely evaded in some districts. The Commissioner of Chittagong reports that this is the case in Chittagong, and that "there is really a good deal of sympathy with the persons who break this particular part of the law, and that giving information is looked on as 'bad form.'" The Deputy Commissioner of Singhboom remarks that "the native trading community look upon the stamp duty imposed by law, slight as it is, in the light of a species of taxation to be evaded on principle." There is reason to believe that, in the absence of strict supervision, the law can be evaded with comparative ease and impunity, and the Lieutenant-Governor trusts that the Board will not relax their efforts to maintain a vigilant control over this branch of the revenue.

An important ruling has been given by the High Court on the question of stamp duty under this head. A cloth merchant of Calcutta presented before the Collector a Bengali account book, in which there were various entries of payment made in respect of goods purchased by him from several wholesale merchants. In making these payments, the cloth merchant obtained against the entries the signature of the respective parties in acknowledgment of money paid to them. The Collector held that these entries constituted each a separate receipt, and he impounded the book. A test case was instituted in the Court of the Presidency Magistrate, and was referred by him for the decision of the High Court, which held that each entry was a receipt within the meaning of clause 17, section 3 of the Stamp Act, and was therefore liable to stamp duty.

10. In the other classes of non-judicial stamps which are of relatively minor importance, there were decreases of Rs. 2,227 under foreign bill stamps, Rs. 23,322 under share transfer stamps, Rs. 14,501 under hundi stamps and Rs. 2,724 under one-anna impressed stamps. On the other hand, there were increases of Rs. 825 under advocate, vakeel, and attorney stamps, and Rs. 1,328 under stamps for Notarial Acts. The decrease under "foreign bill" and "one-anna" impressed stamps is ascribed to the dulness of trade during the year, while the explanation of the falling off under share transfer stamps is to be found in the fact that the year was very unfavourable for joint stock companies generally. The decrease under hundi stamps is attributed to the extended operation of the postal money-order system, which must gradually diminish the sale of this class of stamps. The increase under advocate, vakeel, and attorney stamps was owing to a larger number of enrolments during the year, and under stamps for Notarial Acts to causes more or less of a local character. While writing of the fluctuations in revenue from stamps for Notarial Acts, the Board remark on the general ignorance which at present prevails of what is and what is not a Notarial Act, and ask for an authoritative ruling on the subject. The Lieutenant-Governor would prefer to deal with this question separately from the annual report, and will await specific proposals from the Board.

11. The following statement shows the results of the sales of the four kinds of judicial stamps during the last two years:—

DESCRIPTION OF STAMPS.	SALES IN		Increase.	Decrease.
	1883-84.	1884-85.		
	Rs.	Rs.	Rs.	Rs.
Court-fees stamps	83,45,883	86,34,408	2,88,525
High Court service stamps	8,000	6,000	2,000
Calcutta Small Cause Court stamps	2,98,701	3,13,111	14,410
Total	86,52,584	89,53,519	3,02,935	2,000
Stamps for copies	3,79,007	4,11,427	32,420
Total of all kinds	90,31,591	93,64,946	3,35,355	2,000

The gross receipts increased from Rs. 90,31,591 to Rs. 93,64,946 during the year, yielding a net increase of Rs. 3,33,355 or 3·6 per cent. There was an increase in 29 districts ranging from 18·5 to ·3 per cent., and a decrease in 16 districts ranging from 14·6 to 1·7 per cent. By far the greatest increase occurred in Calcutta; next in order come Mymensingh, Mozufferpore, Bhagulpore, Dacca, Rajshahye, Hooghly, Shahabad, Sarun, Monghyr, Furreedpore and Midnapore. The falling off was heaviest in Backergunge and considerable in Moorshedabad, Noakholly and Hazaribagh. The large increase in Calcutta (Rs. 1,21,601) is due to the increase in the payments of stamp duty on probates; the fall in Backergunge is unexplained. The fluctuations in the other districts were due to local and accidental causes which are of no general interest.

12. The number of cases in which deficient stamp duty and penalty were levied by civil and revenue courts during each of the past five years, and the amount realized in these cases, are exhibited in the following table:—

YEARS.	NUMBER OF CASES.		AMOUNT OF DUTY AND PENALTY REALIZED.		TOTAL.	
	Civil courts.	Revenue officers.	By civil courts.	By revenue officers.	Cases.	Amount.
			Rs.	Rs.		Rs.
1880-81	1,062	1,598	10,945	19,841	2,660	30,786
1881-82	1,242	2,215	10,711	28,830	3,457	40,542
1882-83	1,776	2,304	13,463	26,917	4,080	40,380
1883-84	1,686	2,047	12,426	23,063	3,733	35,489
1884-85	1,500	2,193	13,825	22,866	3,693	36,691
Increase in 1884-85 as compared with 1883-84	146	1,399	1,203
Decrease in 1884-85 as compared with 1883-84	186	196	40

It is satisfactory to find that the observations made on this subject in the Resolution recorded last year have induced greater attention by revenue officers to the duty of enforcing compliance with the stamp laws. All the divisions, however, except Patna, show a falling off in the number of cases detected by the civil courts. There was a decrease of 11·03 per cent. in the total number of cases, while on the total amount of duty and penalty realized there was an increase of 11·2 per cent. These results are not altogether satisfactory. Regarding the number of cases dealt with by the revenue officers, the largest falling off occurred in the Presidency, Chittagong, and Bhagulpore Divisions. Several of the districts which showed poor results last year show considerable improvement, especially Bankoora, Midnapore, Hooghly, Nuddea, Furreedpore, and Chumparun; but still in many districts the number of detected

cases bears but a small proportion to those which, but for the negligence of the local officers, could be brought to light.

13. The number of prosecutions for infringement of the provisions of the Indian Stamp Act was 595 against 527 in the previous year; 704 persons were brought to trial, of whom 492 were convicted and no less than 153 acquitted. This result is unsatisfactory, whether viewed in the light of unnecessary or careless prosecutions. The amount realized as fines was Rs. 5,366, while Rs. 184 were disbursed as rewards to informers. There is reason to believe that a tendency prevails among some Magistrates to inflict fines which are smaller in amount than the penalty provided under the Stamp Act. The imposition of mere nominal fines is a direct encouragement to the public to infringe the provisions of the law; and the Lieutenant-

Burdwan.

Governor desires again to impress on district officers the necessity of keeping a strict watch over the action of subordinate Magistrates in this matter. Taking together the cases in which stamp duty and penalty were realized by Collectors, and those in which prosecutions were instituted, the Board observe that a marked improvement occurred in the districts noted in the margin, while the most unfavourable results were obtained in the 24-Pergunnahs, Moorshedabad, Khulna, Chittagong, Maldah, Pooree, and Lohardugga.

14. The Lieutenant-Governor desires to thank the Board for their careful administration of the Stamp Department during the year. The names of the officers who have been mentioned as specially deserving of credit will be noted in the Appointment Department.

ORDER.—Ordered that a copy of the Resolution, with a copy of the Report, be submitted to the Government of India in the Department of Finance and Commerce for information.

Ordered also that a copy of the Resolution be forwarded to the Board of Revenue.

Ordered, further, that extract paragraph 14 of the Resolution, and paragraphs 99 to 102 of the Report, be forwarded to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secy. to the Govt. of Bengal.

REGULATIONS FOR MATRICULATION.

The 27th October 1885.—The following communication and regulations for the Matriculation Examination of the University of London are published for general information.

A. P. McDONNELL,
Secretary to the Govt. of Bengal.

No. 89 Public (Educational), dated India Office, London, the 10th September 1885.

From—Her Majesty's Secretary of State for India,

To—His Excellency the Right Hon'ble the Governor-General of India in Council.

I FORWARD copy of a letter received from the Clerk to the Senate of the University of London, and its accompanying packet of the Matriculation Regulations of the University for the information and guidance of intending candidates for matriculation.

University of London, Burlington Gardens, W., dated 25th August 1885.

From—T. C. MERCHANT DOUSE, Esq., Clerk to the Senate,

To—J. A. GODLEY, Esq., C.B., &c., &c., &c.

In the absence of the Registrar, I have the honour to forward herewith three packets of the Matriculation Regulations of this University for transmission to the three presidential capitals of India, in order that intending candidates for matriculation may be easily able to obtain copies of the necessary instructions.

EXAMINATIONS IN 1885-86.

THE following are the dates at which the several examinations in the University of London for the year 1885-86 will COMMENCE :—

MATRICULATION.—Monday, June 15, 1885; and Monday, January 11, 1886.

BACHELOR OF ARTS.—Intermediate, Monday, July 20; B.A., Monday, October 26.

MASTER OF ARTS.—Branch I., Monday, June 1; Branch II., Monday, June 8; Branch III., Monday, June 15.

DOCTOR OF LITERATURE.—Intermediate, Monday, June 1; D.Lit., Tuesday, December 1.

SCRIPTURAL EXAMINATIONS.—Tuesday, December 1.

BACHELOR OF SCIENCE.—Intermediate, Monday, July 20; B.Sc., Monday, October 19.

DOCTOR OF SCIENCE.—Within the first twenty-one days of June.

BACHELOR OF LAWS.—Intermediate and LL.B., Monday, January 4, 1886.

DOCTOR OF LAWS.—Tuesday, January 19, 1886.

BACHELOR OF MEDICINE.—Preliminary Scientific, Monday, July 20; Intermediate, Monday, July 27; M.B., Monday, October 26.

BACHELOR OF SURGERY.—Tuesday, December 8.

MASTER IN SURGERY.—Monday, December 7.

DOCTOR OF MEDICINE.—Monday, December 7.

SUBJECTS RELATING TO PUBLIC HEALTH.—Monday, December 14.

BACHELOR OF MUSIC.—Intermediate, Monday, December 14; B.Mus., Monday, December 21.

DOCTOR OF MUSIC.—Intermediate, Monday, December 14; D.Mus., Monday, December 21.

ART, &c., OF TEACHING.—Tuesday, March 2, 1886.

REGULATIONS.

MATRICULATION.

[Candidates for any Degree in this University must have passed the MATRICULATION EXAMINATION. No exemption from this rule is allowed on account of Degrees obtained or Examinations passed at any other University.]

[This Examination is accepted (a) by the College of Surgeons, (b) by the Incorporated Law Society, in lieu of their Preliminary Examinations. It also exempts candidates for admission to the Royal Military College from the Preliminary Test, except in Geometrical Drawing. And it is among those Examinations of which some one must be passed (1) by every Medical Student on commencing his professional studies; and (2) by every person entering upon Articles of Clerkship to a Solicitor,—any such person who may have Matriculated in the Honours or in the First Division being entitled to exemption from one year's service.]

[This and all other Examinations of the University, together with the Prizes, Exhibitions, Scholarships, and Medals depending upon them, are open to Women upon exactly the same conditions as to Men.]

THERE shall be two Examinations for MATRICULATION in each year; one commencing on the Second Monday in January, and the other on the Third Monday in June.¹

No Candidate shall be admitted to the MATRICULATION EXAMINATION unless he have produced a Certificate showing that he has completed his Sixteenth year.² This Certificate shall be transmitted to the Registrar at least *one calendar month* before the commencement of the Examination.

A Fee of Two Pounds shall be paid at Matriculation. No candidate shall be admitted to the Examination unless he have previously paid this Fee to the Registrar.³ If, after payment of his Fee, a Candidate withdraws his name, or fails to present himself at the Examination, or fails to pass it, the Fee shall not be returned to him, but he shall be allowed to enter for any subsequent MATRICULATION EXAMINATION upon payment at every such entry of an additional Fee of One pound, provided that he give notice to the Registrar at least *one calendar month* before the commencement of the Examination.

The Examination shall be conducted by means of Printed Papers; but the Examiners shall not be precluded from putting, for the purpose of ascertaining the competence of the Candidates to pass, *vivâ voce* questions to any Candidate in the subjects in which they are appointed to examine.

Candidates shall not be approved by the Examiners unless they have shown a competent knowledge in each of the following subjects, according to the details specified under the several heads:—

1. Latin;
2. Any two⁴ of the following Languages:—(a) Greek, (b) French, (c) German, and (d) either Sanskrit or Arabic⁵;
3. The English Language, English History, and Modern Geography;
4. Mathematics;
5. Natural Philosophy;
6. Chemistry.

The following are the particulars of the foregoing subjects of Examination:—

LANGUAGES.

LATIN.

One Latin subject to be selected by the Senate one year and a half previously from the works of the undermentioned authors:⁶

Virgil ... One Book of the Georgics, and one Book of the *Æneid*.

Horace ... Two Books of the Odes.

Sallust ... The Conspiracy of Catiline, or the War with Jugurtha.

Cæsar ... One of the longer or Two of the shorter Books of the Gallic War.

Livy ... One Book.

Cicero ... De Senectute or De Amicitia, with One of the following Orations:—*Pro Lege Maniliâ*, one of the four Catilinarian Orations, *Pro Archiâ*, *Pro M. Marcello*.

Ovid ... One Book of the Metamorphoses and One Book of the Epistles or Heroides, or *Tristia*; or Two Books of the *Tristia*.

The paper in Latin shall contain passages to be translated into English, with questions arising out of the book selected. Short and easy passages shall also be set for translation from other books not so selected. A separate Paper shall be set containing questions in Latin Grammar, with simple and easy sentences of English to be translated into Latin.⁷

GREEK.⁸

One Greek subject, to be selected by the Senate one year and a half previously from the works of the undermentioned authors:⁹

Homer ... One Book.

¹ These Examinations may be held not only at the University of London, but also, under special arrangement (see Appendix I.), in other parts of the United Kingdom, or in the Colonies.

² A Certificate from the Registrar-General in London or from the Superintendent Registrar of the District, or a certified copy of the Baptismal Register, is required in every case in which it can possibly be obtained. In other cases a Declaration of the Candidate's age, and that he is unable to procure his Certificate of Birth or Baptism, made before a Magistrate by his parent or guardian, or by himself if of full age, will be accepted.—Every such document will be returned to the candidate or, or before Registration (see Note 1 on page 54).

³ Fees must be paid when Candidates inscribe their names on the Register of the University, and should not be sent in advance. Information respecting the time and place of Registration will be sent to Candidates with the acknowledgment of their Certificates of Age or their Notices.

⁴ No credit will be given for more than two of these Languages.

⁵ Candidates desiring to be examined in either Sanskrit or Arabic must give at least *Two Calendar Months'* notice to the Registrar, and must mention the other optional Language which they select.

⁶ The LATIN subjects for 1886 and 1887 will be—

For January 1886:—*Ovid*, Metamorphoses, Book I, and *Tristia*, Book I.

For June 1886:—*Livy*, Book XXII.

For January 1887:—*Cæsar*, De Senectute and *Pro Lege Manilia*.

For June 1887:—*Virgil*, Georgics, Book II, and *Æneid*, Book XII.

⁷ Special stress is laid on accuracy in the answers to the Grammar questions, and on the correct rendering of English into Latin.

⁸ Candidates may substitute German for Greek.

⁹ The GREEK subjects for 1886 and 1887 will be—

For January 1886:—*Xenophon*, Anabasis, Book III.

For June 1886:—*Euripides*, Hercules furens.

For January 1887:—*Homer*, Iliad, Book XVI.

For June 1887:—*Xenophon*, Anabasis, Book II.

Xenophon ... One Book.

Euripides ... *Hecuba*; *Andromachi*; *Hercules Furens*. (One Play.)

The Paper in Greek shall contain passages to be translated into English, with questions arising out of the book selected, and with general questions in Grammar.¹ Short and easy passages shall also be set for translation from other books not so selected.

FRENCH.

The Paper in French shall contain passages for translation into English and questions in Grammar, limited to the *Accidence*.

GERMAN.

The Paper in German shall contain passages for translation into English, and questions in Grammar, limited (except when German is taken as an alternative for Greek²) to the *Accidence*.

SANSKRIT.³

Sanskrit subjects, to be selected by the Senate one year and a half previously from the under-mentioned works:⁴

Hitopadesa, Books II to IV.

Panchatantra, Books II to V.

Sahityaparichaya, Parts I and II, pp. 1-93.

Ramayana, Book I.

Mahabharata (Story of Nala, Story of Savitri, *Bakavadhaparvan*, *Sakuntalopakhyana*)

Manu, Books II to VII.

The Paper in Sanskrit shall contain passages to be translated into English, with questions in Grammar. A passage or short passages shall also be set for translation from other books not so selected.

ARABIC.⁵

The Paper in Arabic shall contain passages for translation into English, and questions in Grammar.

THE ENGLISH LANGUAGE, ENGLISH HISTORY, AND MODERN GEOGRAPHY.

Orthography: Writing from Dictation: The Grammatical structure of the Language.

History of England to the end of the Seventeenth Century, with questions in Modern Geography.

MATHEMATICS.

ARITHMETIC.

The ordinary rules of Arithmetic.

Vulgar and Decimal Fractions.

Extraction of the Square Root.

ALGEBRA.

Addition, Subtraction, Multiplication, and Division of Algebraical Quantities.

Proportion.

Arithmetical and Geometrical Progression.

Simple Equations.

GEOMETRY.

The First Four Books of Euclid, or the subjects thereof.

NATURAL PHILOSOPHY.⁶

MECHANICS.

Composition and Resolution of Statical Forces.

Simple Machines (*Mechanical Powers*):—Ratio of the Power to the Weight in each.

Centre of Gravity.

General Laws of Motion, with the chief experiments by which they may be illustrated.

Law of the Motion of Falling Bodies.

HYDROSTATICS, HYDRAULICS, AND PNEUMATICS.

Pressure of Liquids and Gases, its equal diffusion, and variation with the depth.

Specific Gravity, and modes of determining it.

The Barometer, the Siphon, the Common Pump and Forcing Pump, and the Air-Pump.

¹ Special stress is laid on accuracy in the answers to the questions in Greek-Grammar.

² That is, on the Tuesday morning (see Time Table, page 68).

³ See the 5th note in page 1903.

⁴ The Sanskrit subjects for 1886 and 1887 will be—

For January 1886 :—*Panchatantra*, Book V; *Ramayana*, Book I, Chapter 66—77; *Manu*, Book V.

For June 1886 :—*Hitopadesa*, Book III; *Ramayana*, Book I, Chapters 20-22; *Manu*, Book II, 1-163.

For January 1887 :—*Hitopadesa*, Book IV; Story of Nala, Lecture 1-10; *Manu*, Book II, 164 to the end.

For June 1887 :—*Panchatantra*, Book II; Story of Nala, Lectures 11-16; *Manu*, Book III, 163 to the end.

⁵ The questions in Natural Philosophy will be of a strictly elementary character.

OPTICS.

Laws of Reflexion and Refraction.

Formation of Images by Mirrors and Simple Lenses.

HEAT.

Its sources. Expansion. Thermometers—relations between different scales in common use. Difference between Temperature and Quantity of Heat. Specific and Latent heat. Calorimeters. Liquefaction. Ebullition. Evaporation. Conduction. Convection. Radiation.

CHEMISTRY.

Chemistry of the Non-metallic elements; including their compounds as enumerated below—their chief physical and chemical characters—their preparation—and their characteristic tests.

Oxygen, Hydrogen, Carbon, Nitrogen, Chlorine, Bromine, Iodine, Fluorine, Sulphur, Phosphorus, Silicon.

Combining proportions by weight and by volume. General nature of Acids, Bases, and Salts. Symbols and Nomenclature.

The Atmosphere—its constitution; effects of Animal and Vegetable life upon its composition.

Combustion. Structure and properties of Flame. Nature and composition of ordinary Fuel.

Water. Chemical peculiarities of Natural Waters, such as rain-water, river-water, spring-water, sea-water

Carbonic Acid. Carbonic Oxide. Oxides and Acids of Nitrogen. Ammonia. Olefiant Gas, Marsh Gas, Sulphurous and Sulphuric Acids, Sulphuretted Hydrogen.

Hydrochloric Acid Phosphoric Acid and Phosphuretted Hydrogen. Silica.

The Examinations shall be conducted in the following order:—

MONDAY.

Afternoon, 2 to 4. Latin.

4 to 6 Latin Grammar and Composition.

TUESDAY.

Morning, 10 to 1. Greek, German, Sanskrit, or Arabic.

Afternoon, 3 to 6. French or German.

WEDNESDAY.

Morning, 10 to 1. Arithmetic and Algebra.

Afternoon, 3 to 6. Geometry.

THURSDAY.

Morning, 10 to 1. English Language.

Afternoon, 3 to 6. English History and Modern Geography.

FRIDAY.

Morning, 10 to 1. Natural Philosophy.

Afternoon, 2 to 5. Chemistry.

On Monday morning at nine o'clock in the week next but two after the Examination, the Examiners shall publish a numerical list of the candidates who have passed. And on the Monday morning next following at nine o'clock the Examiners shall publish a numerical list of the candidates who have passed, arranged in three divisions;—in the Honours Division in the order of proficiency¹; in the first and second divisions in numerical order.

A pass certificate signed by the Registrar shall be delivered to each candidate after the report of the Examiners shall have been approved by the Senate.²

If, in the opinion of the Examiners, any candidates in the Honours Division of not more than twenty years of age at the commencement of the Examination shall possess sufficient merit, the first among such candidates shall receive an exhibition of thirty pounds per annum for the next two years; the second among such candidates shall receive an exhibition of twenty pounds per annum for the next two years; and the third shall receive an exhibition of fifteen pounds per annum for the next two years; such exhibitions to be payable in quarterly instalments, provided that on receiving each instalment the exhibitioner shall declare his intention of presenting himself either at the two examinations for B.A., or at the two examinations for B.Sc., or at the INTERMEDIATE EXAMINATION IN LAWS, or at the PRELIMINARY SCIENTIFIC and INTERMEDIATE EXAMINATIONS IN MEDICINE, within Three Academical Years³ from the time of his passing the MATRICULATION EXAMINATION.

¹ The places of candidates in the Honours Division are determined by their respective degrees of proficiency in the subjects of the Examination taken collectively.

² Certificates are generally ready for issue about a month after the publication of the Classified Pass List of each examination; and, in the absence of any request to the contrary, they will be posted to the addresses given by the candidates on their Schedules of Entry.

³ By the term "Academical Year" is ordinarily meant the period intervening between any examination and an examination of a higher grade in the following year which period may be either more or less than a Calendar year. Thus the interval between the Intermediate Examination in Arts, Science, and Medicine, and the Degree Examinations of the next year in those Faculties, respectively, is about sixteen months; whilst the interval between the B. A. Examination and M. A. Examination of the next year, or between the B. Sc. Examination and the D. Sc. Examination of the next year, is less than eight months. Nevertheless, each of these intervals is counted as an "Academical Year."

Under the same circumstances, the Fourth among such candidates shall receive a prize to the value of ten pounds in books, Philosophical instruments, or money; and the fifth and sixth shall each receive a prize to the value of five pounds in books, Philosophical instruments, or money.

Any candidate who may obtain a place in the Honours division at the MATRICULATION EXAMINATION in January shall be admissible to the INTERMEDIATE EXAMINATION either in Arts or in Science in the following July.

APPENDIX.

I.

PROVINCIAL EXAMINATIONS.

THESE Examinations are appointed by the Senate from time to time, upon the application of any City, Institution, or College desiring to be named as a local centre for one or more Examinations; and are carried on simultaneously with the Examinations in London, under the supervision of Sub-Examiners also appointed by the Senate.

Candidates wishing to be examined at any Provincial centre must give notice of entry (naming the centre they select, and including their certificates) to the Registrar of the University of London, who will make all necessary arrangements.

A Fee varying from 1*l.* to 2*l.* is usually charged by the local authorities, in addition to the University Fee.

Both Fees are payable on Registration, which takes place at the Provincial centres at a time and place of which due notice will be sent to Candidates.

The Answers of the Candidates at the Provincial Examinations are reviewed by the Examiners at the same time with the Answers of the Candidates examined in London; and a List of the Candidates who have passed at each Provincial Examination is published at the time fixed by the Regulations, at the place where such Examination has been held.

The MATRICULATION EXAMINATION OF JUNE 1885 was held at—

Aberystwith :—University College ;
Bangor :—University College ;
Birmingham :—Queen's College ;
Bristol :—University College ;
Cardiff :—University College ;
Cheltenham (for Ladies only) :—The Ladies' College ;
Downside :—St. Gregory's College ;
Eastbourne :—New College ;
Edinburgh :—The Literary Institute ;
Epsom :—The Royal Medical College ;
Leeds :—The Yorkshire College ;
Liverpool :—University College ;
Manchester :—The Owens College ;
Newcastle-on-Tyne :—The School of Science and Art ;
Sheffield :—Firth College ;
Stonhyhurst :—Stonhyhurst College ;
Ushaw :—St. Cuthbert's College ;
Ware :—St. Edmund's College.

The MATRICULATION EXAMINATION OF JANUARY 1886 will be held at—

Aberystwith :—University College ;
Birmingham :—Queen's College ;
Glasgow :—Anderson's College ;
Portsmouth :—The Grammar School.

The MATRICULATION EXAMINATION OF JUNE 1886 will be held at—

Birmingham :—Queen's College ;
Bristol :—University College ;
Liverpool :—University College ;
Nottingham :—University College ;
Oswestry :—The High School ;
Sheffield :—Firth College.

The INTERMEDIATE EXAMINATION IN ARTS, 1885, was held at—

Birmingham :—The Mason Science College ;
Cheltenham (for Ladies only) :—The Ladies' College ;
Liverpool :—University College ;
Manchester :—The Owens College ;
Ushaw :—St. Cuthbert's College ;
Ware :—St. Edmund's College.

The INTERMEDIATE EXAMINATION IN SCIENCE¹ and the PRELIMINARY SCIENTIFIC (M.B.) EXAMINATION¹, 1885, was held at—

Birmingham :—The Mason Science College ;
Cheltenham (for Ladies only) :—The Ladies' College ;
Liverpool :—University College ;
Manchester :—The Owens College ;
Ware :—St. Edmund's College.

¹ With the exception of the Practical Examination in Biology and Zoology, which must be carried on at the University.

The B. A. EXAMINATION, 1885, will be held at—
Cheltenham (for Ladies only):—The Ladies' College;
Liverpool:—University College;
Manchester:—The Owens College.

The INTERMEDIATE, PRELIMINARY, and B.A. EXAMINATIONS of 1886 will be held at—
Liverpool:—University College.

II.

SCHOLARSHIPS, &c.

GILCHRIST SCHOLARSHIPS, EXHIBITIONS, AND PRIZES.

I. BRITISH SCHOLARSHIPS, &c.:

(a) For Male Candidates.

1. A Scholarship of the value of Fifty Pounds per annum, tenable for three years, is biennially offered to Candidates intending to pursue, at OWENS COLLEGE, MANCHESTER, their studies for Graduation in one of the Faculties of the University of London; a single Scholarship of Fifty Pounds per annum for three years being awarded to the highest of those Candidates at the June Matriculation Examination who shall have been previously approved by the Principal of Owens College, provided that he pass in the Honours Division; or, in case no Candidate should so pass, two Scholarships each of Twenty-five Pounds per annum, being awarded to the two Candidates as aforesaid who shall stand highest in the First Division.—Particulars may be obtained on application to the Principal of Owens College, Manchester.

2. A Scholarship of Fifty Pounds per annum, tenable for three years, is annually awarded to that Candidate in the Honours Division at the June Matriculation Examination who shall stand highest of the Candidates previously approved by the Principal of UNIVERSITY COLLEGE, BRISTOL; and who intends to study at that College with a view to Graduation in one of the Faculties of the University of London. [N.B.—This Scholarship is open to Women.] Further particulars may be obtained on application to the Principal of University College, Bristol.

(b) For Female Candidates.

1. Two Exhibitions, one of Thirty Pounds, the other of Twenty Pounds per annum, tenable for two years, are annually awarded at the June Matriculation Examination to the two female Candidates, of not more than twenty years of age at the commencement of the Examination, who pass highest in the Honours Division, to assist them in pursuing their studies at some Collegiate Institution approved by the Gilchrist Trustees.

2. Two Exhibitions, one of Forty Pounds, the other of Thirty Pounds per annum, tenable for two years, are annually awarded to the two Female Candidates who pass highest at the Intermediate Examination in Arts (provided that they obtain in the one case at least two-thirds, and in the other at least three-fifths, of the total number of marks), to assist them in pursuing their studies at some Collegiate Institution approved by the Gilchrist Trustees.

3. A Book Prize of the value of Ten Pounds is annually awarded to the Female Candidate who passes highest at the B.A. Examination, provided she obtain not less than two-thirds of the total number of marks.

[See also the BRISTOL Scholarship above.]

Further particulars may be obtained on application to the Secretary to the Gilchrist Educational Trust, 4 Broad Sanctuary, Westminster, S.W.

II. INDIAN SCHOLARSHIPS:

A Scholarship of the value of One Hundred and Fifty Pounds per annum, and tenable for four years, is annually awarded to the Native Candidate who passes highest in the January Matriculation Examination carried on at CALCUTTA, BOMBAY, MADRAS, and COLOMBO; provided that such Candidate passes either in the Honours or in the First Division, is not more than 22 years of age, and is desirous of prosecuting his studies, either at the University of Edinburgh or at University College, London, with a view to Graduation in one of the Faculties of the University of London.

Further particulars of the *Indian Scholarships* may be obtained on application to the Secretary to the Gilchrist Educational Trust, 4 Broad Sanctuary, Westminster, S.W.

III. COLONIAL SCHOLARSHIPS:

1. A Scholarship of the value of One Hundred Pounds per annum, and tenable for three years, is annually awarded to the highest among those Candidates at the January Matriculation Examination carried on at MELBOURNE, SYDNEY, ADELAIDE, and HOBARTON who passes either in the Honours or in the First Division, is not more than 22 years of age, and is desirous of prosecuting his studies either at the University of Edinburgh, or at University College, London, with a view to Graduation in one of Faculties of the University of London.

2. A similar Scholarship, under the same conditions, is biennially awarded to the Candidate who passes highest at the January Matriculation Examination carried on in NEW ZEALAND.

3. A similar Scholarship under the same conditions is triennially awarded to the Candidate who passes highest at the June Matriculation Examination carried on at FREDERICTON (New Brunswick) and HALIFAX (Nova Scotia).

(Note.—Every Candidate for a Colonial Scholarship must either be a Native of the Colony in which he presents himself, or have resided therein for the five years immediately preceding.)

Further particulars of the *Colonial Scholarships* may be obtained on application to the Secretary to the Gilchrist Educational Trust, 4 Broad Sanctuary, Westminster, S. W.

WEST SCHOLARSHIP.

This Scholarship, of the value of thirty pounds, and tenable for one year, is awarded by the Council of University College, London, to that candidate at the June Matriculation Examination who distinguishes himself the most in English.—Further particulars may be obtained of the Secretary of University College, Gower Street, London, W. C.

TUFFNELL SCHOLARSHIPS.

Two Scholarships, of the value of about 100*l.* each, and tenable for two years, are awarded by the Council of University College for distinction in Analytical and Practical Chemistry, and in General Chemistry, alternately, to that student of the College, *being an Under-Graduate of the University of London of not more than three years' standing*, who shall have passed the most distinguished examination in the subjects for which the Scholarship is to be conferred, and shall have evinced sufficient merit to entitle him to the Scholarship. Further particulars may be obtained of the Secretary of University College, Gower Street, London, W. C.

REID STUDENTSHIPS FOR WOMEN.

A Free Studentship at Bedford College, value 30 guineas per annum, tenable for two years, will be awarded to the Woman taking the highest place in the Honours Division of the January Matriculation Examination, and to the Woman taking a similar place at the June Matriculation Examination.

A Free Studentship at Bedford College, value 30 guineas per annum, tenable for two years, will be awarded to the Woman taking the highest place in the Intermediate Examination in Arts.

A Free Studentship at Bedford College, value 30 guineas per annum, tenable for two years, will be awarded to the Woman taking the highest place in the Intermediate Examination in Science.

For further particulars application should be made to "The Reid Trustees," Bedford College, York Place, Portman Square, London, W.

[*Note.*—The Gilchrist and other Scholarships announced in this Appendix are awarded by the respective Educational Bodies upon the result of the University Examinations; but the University has otherwise no control over, and is not responsible for such award.]

III.

INSTRUCTIONS TO CANDIDATES FOR MATRICULATION.

Application for admission to the Examination may be made in person at the University, Burlington Gardens, W., between 12 and 4 o'clock (on Saturdays between 12 and 2), or by a simple letter of request. No special form of application is necessary. When written application is made, care must be taken to give a correct postal address, and the candidate's name *must be written in full*.

Every application, if made for the first time, must be supported by the requisite document giving proof of age. No candidate, whatever his age, is admitted to the Examination on his first application without the production of such a document.

Candidates who have previously presented themselves at the Examination must state that fact upon applying for admission, but need not produce their certificates of age a second time.

Application should not be made earlier than eight weeks, and must not be made later than a month, before the commencement of the Examination.

The age of a candidate with regard to entry is reckoned up to and inclusive of the first day of the several examinations, that day being computed to fall as late as the Regulations will possibly allow. The two dates, in the case of the Matriculation Examinations, are January 14th and June 21st. Only those candidates therefore who shall have *completed their sixteenth year* on or before either of those dates will be admissible to the January or the June Examination as the case may be; and not those who shall complete such age after those dates.

Fees must be paid on Registration, and not before.

Candidates living in London are recommended to make their application in person, and at the same time to pay their fee and enter their name in the Register.

The full marks obtainable at the Matriculation Examination are 2,800. Of these 2,000 qualify for a Prize, 1,800 for Honours, and 1,400 for the First Division. There is no regulation fixing the number of marks required for a pass. No further details as to the marking at this or other Examinations can be furnished.

The Alphabetical Pass List is sent, as soon as it is printed off, to every College or School from which any Candidate (whether successful or not) has immediately proceeded to the Matriculation Examination.

The Classified List is sent to every College or School from which a *successful* Candidate has immediately proceeded. It is also widely circulated among the leading Newspapers of the United Kingdom.

Lists cannot be supplied to individual Candidates or their friends.

The Examination Papers of past Examinations are not published separately; but the Papers of the previous academical year are printed in the University Calendar of the current year, which is issued annually at the beginning of April, and is to be obtained (price 4*s.*) of the publishers, Messrs. Taylor and Francis, Red Lion Court, Fleet Street, E.C.

REPORT ON THE CALCUTTA AND EASTERN CANALS AND NUDDEA RIVERS FOR THE YEAR 1884-85.

GOVERNMENT OF BENGAL. PUBLIC WORKS DEPARTMENT—IRRIGATION ACCOUNTS.

Dated Calcutta, the 28th September 1885.

RESOLUTION.

READ—

The Report on the Administration of the Calcutta and Eastern Canals and Nuddea Rivers for the year 1884-85, submitted by the Board of Revenue with their Officiating Secretary's letter No. 499B of the 24th July 1885. Comparative statement of Revenue and Charges of Calcutta Canals and Nuddea Rivers for the year 1884-85, submitted by the Officiating Examiner, Public Works Accounts, Bengal, with No. 5937 of the 23rd June 1885.

Read again—

Resolution dated the 28th November 1884 on the report on the Calcutta and Eastern Canals and Nuddea Rivers for the year 1883-84.

RESOLUTION.—The accounts of the Calcutta and Eastern Canals and Nuddea Rivers for the year 1884-85, taken conjointly and inclusive of the direct charges debited to the capital account of the former, show a net revenue of Rs. 3,82,018, being an increase of Rs. 1,13,279 on that of the previous year. This result is not due to an increase in the toll collections, but in the main to a decrease in the charges incurred by the Public Works Department, and to an increase in receipts on account of a large sum paid by the Calcutta Municipality for land. On the other hand, there is a decrease in direct receipts in every case. This is due in the case of the Eastern and Circular Canals to a general depression of trade, and to some extent to the partial failure of the rice crop and the shallow state of portions of Tolly's Nullah. In the Nuddea Rivers the decrease in tolls is on the Jellinghee and Matabhanga rivers, due in the former case to a failure of crops in the northern districts, and on the Matabhanga to the lateness of the preparation of jute for the market by reason of want of water in the eastern districts, and the diversion of the traffic when the river fell to the Sunderbunds route.

2. In the following tables, compiled from the monthly statements of traffic and tolls published by the Public Works Department in the *Calcutta Gazette*, the traffic during each month of the year is compared with that of the corresponding month of the previous year:—

				Leave and pension allow-			
				ances	1,34,007	13,022	1,47,029
				Total	1,34,007	13,022	1,47,029
				Grand Total	65,04,960	2,91,214	67,96,174
				Balance not revenue	1,10,57,527	2,78,512	1,13,36,039
Total	1,75,62,497	5,69,726	1,81,32,223	Total	1,75,62,487	5,69,726	1,81,32,213

(a) Include Rs. 4,885 on account of the salary of the Deputy Collector engaged on the Committee referred to in paragraph 8.

5. As explained in the resolution of the former year, these accounts have not yet been finally accepted, but are the best that can be prepared under the circumstances of the case. In connection with the proposals for the extension and improvement of this system of canals, though more directly with reference to the new docks at Kidderpore, the scheme for the locking of Tolly's Nullah is now before the Government of India, and orders thereon are awaited.

6. The total receipts for the year are Rs. 5,69,726 against Rs. 5,64,101 for the previous year, giving an increase of Rs. 5,625. The receipts from tolls are, however, less by Rs. 16,286, and the excess is made up by indirect receipts, as explained in paragraph 1. The expenditure incurred by the Public Works Department is much reduced, being Rs. 2,40,109 against the previous year's expenditure of Rs. 3,21,334, due chiefly to the completion of the original works in hand. There was no expenditure on original works, capital account, on account of the expenditure on the new girder bridges over Tolly's Nullah and at Gurriah being transferred to the head of Revenue. The charges for repairs and maintenance, which are included in the above figures, show a decrease of Rs. 3,054. The charges for collection are reduced from Rs. 51,587 in 1883-84 to Rs. 47,280 for the year under review. Altogether the total direct charges are Rs. 2,57,389 against Rs. 3,72,921 in 1883-84, showing an improvement of Rs. 85,532, and with the increase in receipts of Rs. 5,625, a net revenue for the year of Rs. 91,157 over and above that of the previous year.

The decrease in tolls occurs under both Calcutta Canals and Tolly's Nullah, the preponderance in the former being the same as noticed last year.

7. The number of boats using the canals shows a decrease in both case on the returns of the last year, but the maundage is greater, showing an increase in the average size of boats, the number under 25 maunds having decreased with a corresponding increase in those above that maundage. This may be due to the increased facilities afforded by the construction of the new Chitpore lock. It would afford useful information if in future returns the number of boats above 500 and 1,000 maunds were shown.

The following table gives the particulars of some items of cargo carried :—

CIRCULAR CANALS AND TOLLY'S NULLAH.

NATURE OF CARGO.	NUMBER OF BOATS.		WEIGHT OF CARGO.		TOLLAGE.	
	1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.
	No.	No.	Mds.	Mds.	Rs.	Rs.
Rice and paddy ...	37,274	31,178	69,51,916	63,61,531	1,12,142	1,08,235
Jute ...	5,872	5,256	28,10,887	34,41,185	52,354	61,733
Wheat ...	21	19	15,950	6,200	184	120
Coal ...	4,751	3,437	17,16,560	20,53,325	27,641	24,806
Lime ...	991	766	9,88,880	9,29,940	17,865	14,753
Salt ...	6,380	6,385	20,18,663	25,71,541	35,850	41,361
Firewood ...	10,694	7,340	41,75,983	35,15,578	66,650	50,954
Miscellaneous ...	65,974	76,039	59,59,647	32,26,945	1,42,512	1,29,404

There is a decrease in most items due to a general depression of trade, and in firewood on account of a diminished demand.

8. The report of the Committee appointed to consider the working and management of the canals has been issued and is under consideration. The decision of Government on the several points which were enumerated for report, and which have since been the subject of considerable correspondence, will be published shortly.

9. The interest account of the canals as at present accepted is given in the statement below :—

CALCUTTA AND EASTERN CANALS.

Interest Account for and to end of 1884-85.

	Amount. Rs.		Amount. Rs.
Net revenue to end of 1883-84 ...	1,10,57,527	Interest charges to end of 1883-84 ...	65,61,871
Ditto during 1884-85 ...	2,78,512	Ditto for 1884-85 ...	2,07,882
		Total to end of 1884-85 ...	67,69,753
		Balance net profit... ...	45,66,286
Total net revenue ...	1,13,36,039	Total ...	1,13,36,039

NUDDEA RIVERS.

10. The net revenue derived from the Nuddea rivers is Rs. 99,681 against Rs. 77,559 for 1883-84. This result is mainly due to a reduction in the charges incurred by the Public Works Department under the head of repairs and establishment. The charges for collection show also a slight decrease. The toll collections have fallen off from Rs. 2,00,908 in 1883-84 to Rs. 1,94,981, of which explanation is given in paragraph 1. The tolls on the Bhagirutti river, however, again show an improvement, which is attributed to a more favourable state of the river. The number of steamers and flats using the rivers have increased, the reason assigned being the plying of a number of steamers for the first time between Nuddea and Kishnaghur, and the establishment of a steamer service between Calcutta and Cutwa by Messrs. Hoare Miller and Company.

By order of the Lieutenant-Governor of Bengal,

J. M. McNEILE, Col., R.E.,

Offg. Secy. to the Govt. of Bengal, P. W. Dept.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 24th October 1885.

No.	District, and date of return.	Rainfall at Nudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.	
BENGAL.				
Western Districts.				
SUNDERBAND DIV.	1 Burdwan, Oct. 24 '85	0.14	Weather—hot, cooled by rainfall of 22nd. Irrigation going on in many villages, but the recent rainfall will obviate the necessity of irrigation. Crops doing well. Public health good. Price of rice 12 to 15½ seers per rupee.	
	Raneegunge ...	0.74		
	2 Bankoora, " 24 "	Nil		
	Bishonpore ...	0.66		
	3 Beerbhoom, " 24 "	0.04		
	Rampore Haut ...	Nil		
4 Midnapore, " 24 "	0.64	Weather—seasonable. A bumper harvest is expected in almost every part of the district that was above flood-level.		
5 Hooghly, " 24 "	3.29	Weather—cloudy with rain. In the area not damaged by the floods a good rice crop is now assured. Public health fair.		
	Howrah, " 26 "	0.53	Weather—sultry and slight rain. Crops left (about ¼th of the whole) are doing well. Health fair.	
	Oooloeriaib ...	0.08		
Central Districts.				
PRESIDENCY DIV.	6 24-Pergha, Oct. 26 '85	Weather—seasonable; rather hot. Prospects of <i>amun</i> , except in low and inundated parts of the district, are good. Public health good.	
	7 Nuddea, " 24 "	2.16	Weather—cloudy with occasional showers. Rain has done much good to <i>amun</i> . Sowing of winter crops still going on, and those already sown are doing well. Public health generally good.	
	Kushtea ...	0.47		
	Meherpore ...	Nil		
		Chuadanga ...	0.03	
		Ranaghat ...	0.39	
	8 Khoolna, " 24 "	1.82	Weather—hot and latterly cloudy with some rain. <i>Amun</i> paddy in flower. Rain has done good to standing crops. Prospects very good. Prices continue high. Coarse rice Rs. 2-12 per maund. Public health good.	
	9 Jessore, " 24 "	0.45	Weather—sultry. Rain of the week has done good to <i>amun</i> crop. Prospects good except in Bongong. Price of rice stationary. Public health fair except in Jhenida, where fever continues.	
	Jhenida ...	0.18		
	Magurah ...	Nil		
	Narail ...	Nil		
	Bongong ...	Nil		
10 Moorsheadabad, " 24 "	0.28	Weather—hot. <i>Amun</i> crop in the <i>Barh</i> promises well. <i>Rubbee</i> crops are being rapidly grown. <i>Kalai</i> doing well. Public health fairly good. Common rice selling at from 13 to 17 seers per rupee.		
	Lalbagh ...		0.73	
	Kandi ...		0.06	
11 Dinagepore, Oct. 23 "	0.11	Weather—fair. Prospects of crops good. Average price of rice 17 seers per rupee.		
12 Rajshahye, " 25 "	0.20	Weather—cloudy and getting cooler. Prospects of <i>amun</i> and other standing crops fair, but a little more rain wanted, particularly in Nowgong. Lands are being prepared for sowing of mustard. Fever general.		
	Nattore ...		0.40	
	Nowgong ...	Nil		
13 Rungpore, " 25 "	2.07	Weather—seasonable. Prospects of <i>amun</i> , ginger, turmeric and sugarcane are good. Price of rice has fallen. Cholera reported from the Nilphamari sub-division.		
14 Bogra, " 24 "	1.49	Weather—heavy fogs have begun to appear. A slight shock of earthquake on the 22nd. Weather tolerably cool now. Prospects of crops excellent. Rain on the 22nd has rendered prospects much brighter. Public health fair.		
15 Pubna, " 24 "	Nil	Weather—occasional showers of rain, cool in the night. Prospects of <i>amun</i> crop good. Public health fair.		
	Serajunge ...		0.30	
16 Darjeeling, " 24 "	1.11	Weather—fair. State and prospects of crops good.		
17 Julpigoree, " 24 "	Nil	Weather—fine; latterly cloudy. Prospects of <i>amun</i> paddy continue favourable. Lands are under preparation for mustard and other cold-weather crops. Public health generally good.		
Eastern Districts.				
Dacca Division.	18 Dacca, Oct. 24 '85	2.28	Weather—seasonable. Harvesting of <i>harkari</i> paddy nearly completed. Prospects of <i>amun</i> and <i>digha</i> paddy and sugarcane good. Public health good.	
	Manickgange ...	0.15		
	19 Furreedpore, " 24 "	2.96		
		Madaripore ...	0.23	Weather—very hot, till a thunder-storm on the 22nd. Prospects of <i>amun</i> good. <i>Rubbee</i> being sown. A good deal of fever at head-quarters.
		Goalundo ...	3.61	
	20 Backergunge, " 22 "	Nil	Weather—seasonable. Prospects of <i>amun</i> crop good. Fever prevails in almost all thanas. Public health only fair.	
	21 Mymensingh, " 23 "	2.97	Weather—cool. Heavy rain on the 22nd. Cold-weather crops being sown. Prospects of winter rice good.	
	Jamulpur ...	0.11		
	Kishoregunge ...	0.21		
Attia ...	Nil			
	Netrokona ...	Nil		

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>conold.</i>			
<i>Eastern District—contd.</i>			
CHITTAGONG DIV.	23 Chittagong Oct. 27 '85	0.88	Weather—seasonable. Prospects of crops fair. Standing crops still damaged by grubs. Prices stationary. Public health good.
	23 Noakholly, Fenny " 28 "	0.68 0.80	Weather—generally fair, last two days of the week cloudy and slightly rainy. Prospects of the <i>amwa</i> crop good except in the Fenny sub-division, where there is still some complaint of damage by insects. Public health good.
	24 Tipperah " 22 "	Nil	Weather—hot and close and occasionally cloudy. Prospects of <i>amwa</i> good. Preparation of lands for cold-weather crops well advanced. Fever reported from the Brahmanbariah and Chandpur sub-divisions; otherwise public health good.
	25 Chittagong Hill Tracts. " "	Nil	Report not received.
	Hill Tipperah, Oct. 21 '85	1.00	Weather—rather hot. Prospects of crops continue favourable. Public health good.
BEHAR.			
PATNA DIV.	26 Patna, Oct. 24 '85	0.44	Weather—generally clear; sun very hot, but cool at night and in early morning. Prospects of paddy crop good. A slight shower fell during the week, but a good fall of rain would be very beneficial. Sowing of <i>rubbee</i> crops has commenced. Fever prevalent in many parts of the district.
	27 Gya, " 24 "	Drizzling rain not sufficient to measure.	Temperature continues high for the time of the year. Cloudy weather on two days of the week gave promise of rain, but it passed off with only a few very slight showers. Rain is urgently wanted for the rice crops and serious injury will be caused to them unless a good fall is obtained shortly. Prices satisfactory as compared with last year. Health good.
	28 Shahabad, " 24 "	Nil	Weather—days cloudy and hot, mornings and evenings getting cool. Paddy crop doing well except in the Bhabhua sub-division where rain is much wanted. <i>Rubbee</i> sowings have commenced. Cholera still prevalent, especially in Sasseram, and fever all over the district.
	29 Durbhunga, " 24 "	1.15 Nil Nil	Weather—cloudy. Paddy crop, except where damaged by the late flood, is in excellent condition. More rain is wanted for the paddy on high lands. Ploughing and sowing of <i>rubbee</i> crops in progress. Prices remain stationary. Public health generally good.
	30 Mozufferpore, " 24 "	Nil	Weather—seasonable. Rice crop doing well. <i>Rubbee</i> crops being sown all over the district. Deaths from cholera still reported from the Sitamarhi sub-division. Public health in other parts of the district continues good.
BRAHMPUTRA DIV.	31 Sarun, " 24 "	0.08 Nil Nil	Weather—seasonable; cloudy with a few drops of rain on the night of the 21st and the morning of the 22nd. Standing crops are looking well. <i>Rubbee</i> sowing has commenced. Sporadic cases of fever reported, public health otherwise good.
	32 Chumpran, " 24 "	Nil	Weather—seasonable. Harvesting of <i>dhadoi</i> crops completed. Prospects of <i>aghani</i> crops continue good. Prices of food-grains have fallen slightly. Cholera has re-appeared in the interior of the district.
	33 Monghyr, Oct. 24 '85	0.05 Nil Nil	Weather—fine with passing clouds; much warmer than usual at this season of the year. Want of rain is beginning to be seriously felt for the high land rice, and a fall would improve the prospects of the <i>rubbee</i> crops. Prices steady. Public health on the whole good.
	34 Bhagulpore, " 24 "	Nil	Weather—cloudy and warm. Prospects of rice not very good. On high lands, it is suffering from want of rain. Cholera still bad in north.
	35 Purneah " 24 "	0.07 0.09 0.13	Weather—fair; rather hot in the day. State of standing crops good. Prospects of <i>aghani</i> fair. Sowing of <i>rubbee</i> crops in full progress. Some cholera and fever in Arraerah; otherwise public health good.
ORISSA.	36 Arraerah " 24 "	0.05	Weather—first part of the week fine and hot, but latter part cloudy. Prospects of winter rice and <i>kala</i> continue good, but rain is wanted. Coarse rice is selling at from 13 to 18 seers per rupee. Public health fair.
	37 Sonthal Perga, " 24 "	0.51 0.02	Weather—not yet settled; wind variable; a little rain on the 22nd. Prospects of paddy crops everywhere splendid. <i>Rubbee</i> sowings progressing favourably. The rain of the 22nd, slight as it was, will do some good to recent sowings. A good deal of fever about.
ODISHA DIV.	38 Cuttack Oct. 23 '85	0.61	Weather—hot and cloudy. Reaping of <i>beali</i> rice completed. Early <i>sarad</i> rice in ear; late <i>sarad</i> doing well, but requires rain. Common rice 11 seers per rupee in town and 15 seers in average in the interior. Public health generally good.
	39 Pooree, " 22 "	4.22 0.59	Weather—cloudy with heavy showers of rain for the last two days of the week. Crops much benefited by the rain. Late <i>sarad</i> rice in ear. <i>Laghu sarad</i> ripening. Miscellaneous crops thriving well. Relief works are going on in the tracts bordering the Chilka owing to the failure of crops in those tracts. Common rice sells at an average of 18 seers per rupee in the Sudder sub-division, and 19 seers 11 chittacks in the Khoorda sub-division. Public health fair.
	40 Balasore, " 23 "	0.4	Weather—cloudy and warm. <i>Beali</i> crops are being cut. State of rice crops exceptionally good. Public health generally good.

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
CHOTA NAGPUR.			
<i>South-West Frontier Agency.</i>			
41	Hasaribagh. Oct. 23 '85	0.98	Weather—latterly cloudy and unsettled; good rain on the 22nd and 23rd. Rice crops suffering in most places for want of rain. Rain also wanted for winter crops. Cases of cholera still continue to be reported; general health otherwise good.
42	Lohardugga. „ 24 „	0.24	Weather—hot and cloudy. Prospects of winter rice continue favourable. Slight rain during the week has done much good to the crop. Rubber being sown. Prices steady. Cholera decreasing in Palamow. General health good.
43	Singbhoom. „ 23 „	2.08	Weather—cloudy with showers. Prospects of crops continue excellent. Prices easy. Cattle-disease reported from two thannas. General health good.
44	Manbhoom, Govindpore „ 24 „	3.87 Nil	Weather—alternately cloudy and cool. Good showers of rain on the 21st and 22nd have done much good to the standing crops. A full sixteen-anna anna crop is expected. Coarse rice 21 annas per rupee at the Purulja market on the 24th. Public health good.

Published for general information.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 26th October 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 23RD OF OCTOBER 1885.

At the close of the previous week weather was fine, and it appeared fairly settled over the whole Province; winds were north-easterly in South Bengal, and there seemed a tendency for the northerly winds to become stronger, and pressure was very uniform at almost all stations. On the 17th instant pressure began to fall rapidly near the Pegu coast, and strong winds commenced to blow at the stations in the south of the Bay. At the same time winds at the stations round the Bengal coast shewed distinct indraught towards the Bay. On the following day pressure commenced to rise at the eastern stations of the Bay and to fall at the western stations, and strong winds continued to blow at Diamond Island and in the south of the Bay. On Monday, the 19th, pressure again rose at the stations in the north and east of the Bay, and it was falling at the central stations on the west coast; strong winds were still blowing in the east and south, and there was a distinct cyclonic circulation over a large part of the Bay, so that on this day the indications clearly pointed either to the formation of a small cyclonic storm in the centre of the Bay, or to the first advance of the monsoon towards the west coast. During the whole of this period, weather in Bengal was almost uniformly fine, and with the exception of light showers in Orissa and in the hills of North Bengal the province was rainless. Winds were light and variable, and temperature was high in all districts.

On the 20th instant the conditions as above described, which existed in the centre of the Bay, became further developed, and it was clear that it was not a cyclonic storm, but a diffused depression, and that a burst of rainfall was advancing towards the coast of the Circars, and on the 20th and following two days rather heavy rain was reported on this and on the Ganjam coast, while lighter rain fell in connection with this disturbance over the whole of Orissa, Chutia Nagpur and South-West Bengal. At the same time the disturbed conditions advanced apparently in a northerly direction, and in addition to giving general rain in the last-named districts, they became more diffused and gave light rain over East Bengal and North Bengal and over parts of South Behar.

With the gradual advance of this diffused depression over Bengal skies of course clouded over, humidity increased very rapidly, temperature, and particularly the night or minimum temperature, increased quickly, and the south-west monsoon conditions in a feeble form again established themselves temporarily over a large part of the province. The burst of rainfall along the west coast can scarcely be considered a true commencement of the Madras rains, but rather as a feeble, diffused and preliminary action, which might under other circumstances have generated a rather severe storm. As it was there were decidedly disturbed conditions which existed along the whole west coast and extended far into Bengal, the centre of greatest barometric depression, which was, however, particularly shallow, being about Vizagapatam, while the centre of heaviest rainfall was at Coconada, which received nearly eleven inches in two days, while Gopalpore also received nearly five inches, and on the 21st alone Vizagapatam registered 2.50 inches. It will thus be seen that for the first three days of the week rainfall was practically absent over Bengal, and that for the remaining four days of the week rainfall was fairly general except in Behar, though a few showers penetrated even as far as this district.

Pressure in Bengal was not very much affected by the formation and progress of the diffused disturbance above described, and the principal variations of pressure for the week have been of the usual oscillatory description. For the whole week the mean pressure over the province has been 0.013" below the normal. The largest defects have been in the western districts, and thus Orissa, Chutia Nagpur and South Behar show a defect approaching 0.03", while East Bengal on the other hand shows a slight, but distinct, excess pressure for the week.

Temperature usually at the latter end of October commences to decrease rapidly, but with the conditions as above described, which have obtained during the present week, the fall of temperature has practically ceased, and high temperatures, both during the day and during the night, have obtained over the whole province. Temperature has thus been considerably in excess of the normal in all districts, the smallest excess being in Orissa, where it equalled 0.7°, while in North Behar the excess above the normal has been 3.1°; over the whole province an average excess temperature of nearly 2° has been registered.

The distribution of the rainfall over the province as regards its time and also locality, and the cause of its occurrence, have already been referred to, and therefore only the question of quantity remains to be stated. The largest amount has been received in Orissa, which reports an average fall for the week of 1.96 inches. The normal fall in this district for this period is 0.73 inch, and thus the rainfall has been nearly three times the normal amount. Chutia Nagpur has received an average amount of 1.50 inches of rain for the week, and as the normal quantity for the week is only 0.14 inch, the actual fall has been more than ten times the normal. South-West Bengal reports an average fall of 1.68 inches against the normal 0.33 inch, the actual has then been about three times the normal. East Bengal averages 1.68 inches, and the normal fall is 0.47 inch, this district has thus received nearly four times the usual amount. North Bengal reports an average fall of 0.94 inch, the normal amount being 0.44 inch, or the actual is more than twice the normal fall. In South Behar the fall for the week has been almost normal, the actual being 0.23 inch and the

normal 0·21 inch, but in this district the rainfall was very local and the largest amount fell in the Southal Pergunnahs. Finally, in North Behar rain has been practically absent for the week except in the Purneah district, where a few light showers were reported.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 23rd of October 1885 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, S. G.'s Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ...

The total fall of rain from 18th to 24th October 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The total fall from 1st January to 24th October 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newmann's No. 85 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph. The mouth of the rain-gauge is one foot above the ground.

d drizzling rain, d dew, t thunder, o overcast, g gloomy, p passing temporary showers, f fog.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 26th October 1885.

For Meteorological Reporter to the Government of India.

MEMORANDA.

BIRTHS and deaths were registered in the principal Municipalities in Bengal during the week ending 3rd October 1885, at the rates, respectively, of 27·1 and 40·0 per 1,000 of population, against 27·8 and 42·6 per 1,000 during the preceding week ending 26th September, indicating a considerable diminution in the registration of deaths.

2. In the following Municipalities births and deaths are reported to have been recorded at the highest rates :—

Gya	38·9	Patna	52·2
Utterpara	37·8	Monghyr	50·6
Naraingunge	37·2	Suburbs of Calcutta	44·7
Monghyr	33·4	Utterpara	37·8
Beaulah	31·5	Chupra	37·1
Purneah	31·1	Durbhanga	34·6
				Serampore	33·4
				Midnapore	31·0
				Jessore	30·6
				Chittagong	30·5

3. The principal diseases specified in the table appended to this memoranda proved fatal at the rates exhibited below, in comparison with the rates of the preceding week :—

				Ratio per mille during the weeks ending—	
				3rd October 1885.	26th September 1885.
Cholera	3·5	3·0
Small-pox	·03	·03
Fever	18·2	20·2
Bowel-complaints	7·0	6·4
Injury	·5	·8
Other causes	10·7	12·1

The noticeable point disclosed by the above figures is that the mortality from fever and from the maladies recorded under the head of "Other causes" had diminished sensibly.

4. The above-mentioned death-causes (excepting small pox, which appears to have prevailed only in the Arrah town, attended with one casualty) caused the greatest loss of life in the following Municipalities :—

Cholera.		Fever.		Bowel-complaints.		Injury.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Gya	25·3	Gya	46·4	Utterpara	37·8	Gya	4·8	Bhagulpore	19·9
Monghyr	11·8	Bhagulpore	40·8	Serampore	17·7			Midnapore	18·6
Durbhanga	6·3	Jessore	30·6	Gya	12·9			Naraingunge	16·6
		Patna	26·6	Monghyr	12·6			Gya	15·7
		Chittagong	21·1					Suburbs of Calcutta	14·7
								Patna	14·6
								Chupra	13·7
								Puri	12·6
								Dacca	12·3

5. Under the heads of Sex, Class and Age, the mortality stands as follows :—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	41·1	Christians	...	13·0	Under 1 year	...	315·5
Females	...	38·7	Hindus	...	43·5	1 and under 5 years	...	59·3
Ratio of male deaths to every 100 female deaths	...	120	Mahomedans	...	32·9	5 " 10 "	...	27·4
						10 " 15 "	...	16·7
						15 " 20 "	...	25·1
						20 " 30 "	...	21·3
						30 " 40 "	...	22·3
						40 " 50 "	...	29·2
						50 " 60 "	...	54·6
						60 years and upwards	...	100·1

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 26th October 1885.

[illegible]

SANITATION OF CALCUTTA.

MUNICIPAL DEPARTMENT—MUNICIPAL.

Darjeeling, the 27th October 1885.

RESOLUTION.

READ—

Letter to the Chairman of the Corporation of the Town of Calcutta, No. 819T—M, dated the 1st July 1885, conveying the remarks of the Lieutenant-Governor on the resolution passed by the Commissioners on the subject of the report of the Commission appointed under section 28 of Act IV (B.C.) of 1876 to consider the cleaning and conservancy of the Town, and the action taken by them towards carrying into effect certain of the recommendations made by the Commission.

Letter to the Government of India in the Home Department, No. 824T—M, dated the 1st July 1885, submitting for information a copy of the report of the Sanitary Commission, together with copies of the correspondence containing the orders passed by the Lieutenant-Governor on the report.

Letter from the Government of India in the Home Department, No. 10000, dated the 31st August 1885, in reply to the above.

Letter to the Chairman of the Corporation of the Town of Calcutta, No. 1668T—M, dated the 9th September 1885, forwarding for the information of the Commissioners copies of the above correspondence with the Government of India.

Letter from the Chairman of the Corporation of the Town of Calcutta, No. 1671, dated the 24th September 1885, reporting the measures that have been adopted by the Commissioners, and the progress made by them in giving effect to the recommendations made by the Sanitary Commission.

The Lieutenant-Governor, in the letter of the 1st July last, to the Chairman of the Calcutta Corporation, gladly recognised the progress in sanitary matters made by the Commissioners in recent years. At the same time he was constrained to animadvert upon the preventible sanitary evils, the continued existence of which had been brought out clearly in the report of Messrs. Beverley and Liddardale, and to record his opinion that, so long as these evils are permitted to exist, the Commissioners cannot be held free from responsibility from the continuance within the Town of sources of disease the effects of which are not controverted and the removal of which is practicable. These views have since been fully accepted by the Government of India, in their letter of the 31st August last, in which it was recorded that, although the present Commissioners have greatly improved on the practice of their predecessors, they have still to show that they are determined to lose no further time, and spare no possible outlay, in removing those grave sanitary evils which have so long made Calcutta a reproach. It was added that the provision made for sanitation, though recently in advance of what was usual in former years, has never been anything like adequate to the crying necessities of the case. The Lieutenant-Governor observes with much satisfaction that the Corporation, as appears from their Chairman's letter of the 24th September, now recognise that a vast amount of work lies before them in the way of sanitary reform, and are fully impressed with the responsibility which attaches to them, so long as the insanitary conditions which still prevail in many parts of the town are not completely removed. It may now be accepted as the result of a long correspondence and enquiry that this practical agreement as to the existence of the evils and the necessity for their removal, will, in the words of His Excellency in Council, "lead to the early preparation of a complete scheme of future operations, which will fully utilise the whole energies and all the available resources of the Corporation, and not be in any degree departed from or postponed until every remediable sanitary defect has been altogether removed."

2. In the meantime, the Lieutenant-Governor accepts the proposals in the present letter as on the whole complying with the main requisitions made in the letter of the 1st July. The scheme for the further extension of the unfiltered water-supply, which is now being considered by the Water-supply Committee, will, when fully completed, enable the Corporation to carry out the recommendations made by the Sanitary Commission for the flushing of the pipe-sewers and the connection, with the sewers, of private privies and zemindary latrines. The action which is being taken in filling up foul tanks, as reported by the Health Officer, is satisfactory so far as it goes, and the Lieutenant-Governor trusts that no relaxation will be allowed in dealing with tanks already condemned, but not as yet filled up. The Chairman of the Corporation states that the Commissioners fully acknowledge the necessity of erecting, at least, one bathing platform in every large bustee, and, in accordance with the recommendation of Mr. Beverley's Commission, have issued instructions for the construction of at least seventy-five platforms before the end of the current year. Some doubt seems to be felt as to the possibility of completing this work, owing to the anticipated delay in obtaining possession of the required land. The Lieutenant-Governor has called the attention of the officers engaged in the work of acquisition to the necessity of promptitude, and will see that no avoidable delays shall occur.

The Lieutenant Governor is glad to observe that the Commissioners have decided upon making the latrines free and adding to their number. Although the measure of freeing the latrines is described as a tentative one, to last for two years, His Honor has little doubt that its advantage will be seen so clearly before the end of that time, that the question of re-imposing the fee is not likely to be again seriously entertained.

In the present letter the Officiating Chairman repeats the assurance given by Mr. Harrison in his letter of the 4th May last, that the reorganisation of the Health Department will be reconsidered upon the appointment of a permanent whole-time Health Officer. The transfer of Dr. O'Brien to other duties should facilitate the early settlement of this important question.

3. In the letter of the 1st July, the Lieutenant-Governor called attention to the fact that the Corporation had rejected the proposals of their executive

to fix the house-rate for 1883-84 at the maximum of 10 per cent., and had since then retained the rate of 7½ per cent.; and His Honor observed that, under these circumstances, it was impossible to avoid the conclusion that the resources at the disposal of the Commissioners have not been utilized to the utmost. The Government of India consider that the action of the Corporation in this matter did not show an adequate appreciation of the requirements of the case, and that the reduction of the house-tax was made in the interests of the house-owners, although there is good ground for supposing that in the great majority of cases the tax has long since been passed on to the occupiers and added to their pre-existing rents. Having regard to the authoritative expression of opinion thus recorded, the Lieutenant-Governor anticipates that the Commissioners will not be unwilling to reconsider their action in this matter, and he is supported in this hope by the concluding sentence of the Officiating Chairman's letter, that the Commissioners do not intend permanently to levy the house-rate at 7½ per cent. The Lieutenant-Governor trusts that this resolution will be borne in mind by the Commissioners when preparing the budget for the coming year, and that they will not allow their hesitation to increase the rate of house-tax, to interfere with the progress and completion of the sanitary reforms which still lie before them, and their responsibility for which they now fully acknowledge.

4. The Lieutenant-Governor must postpone the consideration of many of the questions raised in the correspondence cited in the preamble, until he has received the report of the Special Committee, appointed to enquire into the proposed amalgamation of the Town of Calcutta with the Suburbs or a portion of them. There can be no doubt, as remarked in the concluding paragraph of the Officiating Chairman's letter, that fresh legislation will be necessary to define the constitution, the powers, and the duty of the new Municipality; and the Lieutenant-Governor is glad to be assured of the assistance which the experience of the Commissioners will enable them to give him in the preparation of the necessary law. It will probably not be possible to carry a measure of such magnitude and intricacy through the legislature in the course of the coming session, in which case it may be found necessary to introduce a Bill amending the present Municipal Act in some of the points noticed in the report of the Sanitary Commission, and in the letters of this Government and of the Government of India. This question, however, cannot be finally decided pending the receipt of the amalgamation Committee's report.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Government of Bengal.

No. 824T—M, dated Darjeeling, the 1st July 1885.

From—J. WARE EDGAR, Esq., C.S.I., Offg. Secretary to the Government of Bengal,
Municipal Department,

To—The Secretary to the Government of India, Home Department.

I AM directed to acknowledge the receipt of your letter No. 41, dated the 19th May 1885, communicating the remarks of the Government of India upon the Administration Report of the Calcutta Municipality for the year 1883-84. In paragraph 2 it is requested that the Government of India may be furnished, at an early date, with a copy of the Report of the Commission appointed by the Lieutenant-Governor to enquire into certain matters connected with the sanitation of the Town of Calcutta, together with a copy of the orders of the Government of Bengal thereon.

Letter to the Chairman of the Calcutta Corporation, No. 964, dated the 1st April 1885.

Letter from the Chairman of the Calcutta Corporation, No. 296, dated the 4th May 1885.

Letter to the Chairman of the Calcutta Corporation, No. 819T—M, dated the 1st July 1885.

2. In reply, I am directed to submit, for the information of the Government of India, a copy of the Report of the Sanitary Commission, together with a copy of the correspondence noted in the margin, containing the orders passed by the Lieutenant-Governor on the Report.

3. I am to take this opportunity to submit, for the information of the Government of India, the accompanying copy of a Resolution* recently recorded by the Lieutenant-Governor appointing a Committee to enquire into the boundaries of the Town so as to embrace the more populous and important portions of the Suburbs, and the placing of the fiscal and sanitary concerns of the whole area under one metropolitan authority." Reference is made in the resolution to the Report of the Octroi Committee. A copy of this report and of the papers† connected with it is also enclosed.

* Dated 28th June 1885.

the question "of extending

† Government resolution, dated 4th August 1884.

Letter to Chairman of the Calcutta Corporation, No. 961, dated 4th April 1885.

Letter from Chairman of the Calcutta Corporation, No. 528, dated 26th May 1885.

Government resolution, dated 20th June 1885.

No. 256, dated Simla, the 31st August 1885.

From—A MACKENZIE, Esq., C.S., Secy. to the Govt. of India, Home Dept.,
To—The Secretary to the Government of Bengal, Municipal Department.

I AM directed to acknowledge receipt of your letter No. 824, dated 1st July 1885, submitting a copy of correspondence regarding the sanitation of Calcutta, including the Report of a Special Commission appointed last year by the Lieutenant-Governor under section 28 of Act IV (B.C.) of 1876, with the orders of His Honor thereupon.

2. The Governor-General in Council has read these papers, and the connected Proceedings of the Bengal Government for March and December 1884, with the care demanded by the importance of the subject and the amount of public attention which has recently been directed to it. His Excellency in Council thinks it a matter for grave regret that so much acrimonious feeling and contentious discussion should have been allowed to gather round a subject in which all classes of the Calcutta community, official and unofficial, are personally and equally interested. It appears to the Government of India that the true points for consideration lie on the very surface of the case, and that a disproportionate amount of time and energy has been wasted in discussing issues which are of merely academic or at best of only collateral moment.

3. Thus the question whether the great increase in cholera mortality in Calcutta since 1880* was or was not coincident with the spread over the neighbouring districts of an epidemic cholera-wave, while of interest to students of epidemiology, is but of minor practical importance, so long as the existing defects

* Cholera mortality—	
1880	805
1881	1,693
1882	2,240
1883	2,037
1884	2,272, of which 1,616 deaths occurred in March, April, and May

in the sanitation of the town are as great as they are on all hands admitted to be. The Army Sanitary Commission has repeatedly urged that what practical sanitarians have to look to is the amelioration of those local conditions which determine, as experience shows, the intensity and fatality of epidemic cholera. "Cholera and other epidemics cluster" (as the Army

Sanitary Commission has remarked) "round the foul plague spots of large cities." While Calcutta sanitation is as defective in many points as it is shown to be in the reports of the Special Commission and in the Chairman's memorandum printed at page XCIV of that report, it can be no matter of surprise that epidemic exacerbation of cholera in the neighbourhood should lead to exceptional mortality in the city, and, when it is clearly shown that the disease fastens chiefly upon the most insanitary wards, the consequent mortality must certainly be regarded as preventible. It was long ago pointed out by the Army Sanitary Commission that the best and only practicable way of reducing mortality and minimising the effect of epidemics in Calcutta is to provide the people with pure water to drink, to complete the drainage system and house connections, to fill up all foul tanks and wells, to level and drain the surface soil, to cleanse and keep clean the city, not merely as regard its streets, but throughout its private premises and courts, and to reform radically the *bustees* and their water-supply.

4. Again, an enquiry by the Executive Government into the sufficiency or otherwise of the sanitary provision made by the Municipality does not affect in any way the principles of local self-government as properly understood. The Governor-General in Council regrets to observe the attempts which have been made to prejudice the case by raising irrelevant issues of this description, and to stigmatise all criticism by Government of municipal action as an unwarranted interference with the independence of the Corporation. In all civilised countries, and under all municipal systems, the State has reserved to itself powers such as the Calcutta Municipal Act confers on the Local Government. Thus in England, under the Public Health Act of 1875, the Local Government Board is empowered to examine into and effectually direct municipal sanitation where defects are found to exist without correction; and if such a power of control is found necessary in England, much more is it required in India, where elective municipal institutions on a large scale are comparatively new, and where there are so many influences hostile to the imposition of public burdens for such purposes as sanitation. The Government will not lightly interfere with the independent action of local Boards, but it is bound to see that the health of the community is not sacrificed to a short-sighted and misplaced economy.

5. The Municipal Commissioners have, as it seems to the Governor-General in Council, discussed the question far too exclusively from the point of view of the past progress made in town sanitation and improvement under their administration, and have shown a disposition to resent, on no sufficient grounds, the advice and criticisms of the Local Government. But in fact both the Local Government and the Government of India have repeatedly acknowledged the good work actually done of late years by the Corporation, a summary of which is given in paragraphs 9 to 17 of the Special Commission's Report, and His Excellency in Council is glad once more to take this opportunity of expressing his belief that there is a real desire on the part of at least a large section of the municipal body to push on sanitary improvement and reduce preventible mortality to a minimum. The point really at issue between the Government and the Corporation is as to the *rate* at which such improvements should be carried forward, and the extent to which the municipal resources should be strained to counteract preventible mortality. There can be no doubt that though the Commissioners have, since the introduction of elective institutions in 1876, done much to improve the city, there have been at the same time very serious shortcomings on which the Government has been frequently compelled to comment. Years of valuable time were wasted in discussion before the extension of the filtered water-supply was put in hand. It was not till 1880 that a beginning was made in *bustee* reclamation, and the expenditure up to date has fallen far short of the minimum sum of 1½ lakhs per annum, which the Government of India, in its orders on the report for 1882-83, declared to be necessary. It was not until the beginning of 1883-84 that an establishment for the surface cleaning of *bustees* began to be organised. The work of supplying bathing platforms has been but slowly pushed on. Even now it is evident from the remarks of the Corporation on the Special Commission's Report that there is prospect of considerable delay in improving the service of unfiltered water. The filling up of foul tanks and

wells has not proceeded so fast as might have been expected. These and similar shortcomings have annually been pointed out by Government and the Army Sanitary Commission; and although the present Commissioners have greatly improved upon the practice of their predecessors, they have still to show that they are determined to lose no further time and spare no possible outlay in removing those grave sanitary evils which have so long made Calcutta a reproach.

6. The Governor-General in Council is constrained to remark that there was in the proceedings of the Commissioners, with reference to the budget provisions for, and expenditure on, sanitation during recent years, sufficient ground for public anxiety and for the initiation of further enquiry by the Local Government. This anxiety was no doubt brought to a climax by the extraordinary cholera mortality of the last two years, and showed at times a tendency to degenerate into panic; but the fact remained that, in spite of the reiterated remonstrances of Government and the Army Sanitary Commission, the provision made for sanitation, though recently in advance of what was usual in former years, has never been anything like adequate to the crying necessities of the case; and the Lieutenant-Governor was justified in his efforts to get this fact recognised by the Municipal authorities. It was certainly alarming to observe that, although the cholera mortality of the town had been steadily rising since 1880, the Commissioners had for 1883-84 reduced the sanitation estimates of their own executive officers by nearly 3 lakhs of rupees, while the outlay upon *bustee* reclamation in 1883-84, and the provision made for 1884-85, was far below the minimum sum indicated in the Government orders already referred to.

7. It might indeed fairly have been expected that, when once the drainage and water-supply schemes had so far advanced as to set free some portion of the municipal resources, the Commissioners would have devoted the whole of the funds thus made available to those other improvements without which neither drainage nor water-supply can confer any permanent or general benefit. Instead of this, the earliest opportunity was taken of reducing the house-tax in the interests of the house-owners, although there is good ground for supposing that in the great majority of cases this tax has long since been passed on to the occupiers and added to their pre-existent rents. The Governor-General in Council is compelled to remark that this action on the part of the Corporation, opposed as it was to the recommendations of their own Chairman and executive officers, did not show an adequate appreciation by the Commissioners of the requirements of the case. The Lieutenant-Governor has said that he has no wish to judge the Commissioners by any ideal standard of absolute perfection, and it is indeed very manifest that no place for the application of such a standard could at present be found. But it is no sufficient answer to the case against the Commissioners to point to a certain amount of actual progress, real and even considerable as that may have been, when it is clear that, had the available resources of the Municipality been fully utilized, much more might have been done and many valuable lives in all certainty have been saved.

8. Under these circumstances, and in view of the strong feeling, both in Calcutta itself and in Europe, as to the positive inadequacy of the sanitary arrangements of the town, it is much to be regretted that the Corporation declined to accept the Lieutenant-Governor's proposal of the 16th July 1884, to appoint a strong Commission of Enquiry, under the presidentship of their own Chairman, to examine carefully the whole situation and prepare a comprehensive scheme of sanitary and structural improvement, "in order" (as Sir Rivers Thompson stated) "that the Commissioners might see what the real wants of the town are; how far those wants could be provided with the funds to be made available; and how the funds might be most advantageously expended." It would have been better no doubt had the Lieutenant-Governor put forward this proposal on its merits, and without reference to the alternative appointment of a Special Commission under section 28 of the Act, which the Commissioners naturally regarded as a strong censure upon their administration. But the Governor-General in Council considers that the grounds urged in the Lieutenant-Governor's letter of the 16th July 1884, for a comprehensive enquiry into the condition of the town as a basis for the settlement

of a well-considered plan of future operations, were such as ought to have commanded the cordial concurrence of the Municipality, and the acceptance of the proposal would have gone far to allay the feeling of dissatisfaction which, rightly or wrongly, had taken possession of a large and influential section of the community.

9. This proposal being, however, rejected, the appointment of a Special Commission, under section 28 of the Municipal Act, was in a measure forced upon the Lieutenant-Governor. It was in any case a matter which the law leaves altogether to his discretion. The Governor-General in Council observes, however, that both the Special Commission itself, and the Local Government in the orders which it has passed on the Commission's report, has treated the question under consideration in a broad and conciliatory spirit, though necessarily without that completeness of result which the more detailed and prolonged enquiry, originally suggested by the Lieutenant-Governor, would probably have secured. His Excellency in Council cordially concurs in the hope expressed by His Honor that the good sense and voluntary action of the Municipality will now induce them to give full effect to the recommendations of the Commission, and lead to the early preparation of a complete scheme of future operations which will fully utilise the whole energies and all the available resources of the Corporation, and not be in any degree departed from or postponed until every remediable sanitary defect has been altogether removed. In the opinion of the Government of India no question of remission of municipal taxation can properly arise until it is shown that all important sanitary improvements are adequately provided for. Income should be maintained at the maximum until the town is properly cleansed, drained, and watered. If the ordinary staff of the Municipality is inadequate to superintend the execution of work on such an extended scale, the Local Government could probably arrange to give the necessary temporary assistance.

10. The Governor-General in Council does not propose to examine in detail the recommendations of the Commission, or to consider how far effect might be given to these by orders under section 29 of the Act. That is a matter for the Local Government to determine. His Excellency in Council will content himself with expressing his general concurrence in the remarks of the Lieutenant-Governor on the subject as embodied in Mr. Edgar's letter to the Chairman of the 1st July 1885. His Excellency in Council thinks it, however, his duty especially to endorse the views of the Lieutenant-Governor on the provision of free latrines which are explained in paragraph 12 of that letter. If there is any doubt as to the obligation of the Corporation to make adequate provision of this description for the poorer classes of the population, an early opportunity should be taken of amending the law.

11. The view of the Government of India upon the general question is, as already stated, that, while there is on the Commissioners' own showing so much to be done, the Corporation is bound to utilize its sources of income to the uttermost to provide the necessary establishments and carry out the needed improvements. The Governor-General in Council has already said that 1½ lakhs of rupees is the least sum which should annually be spent upon the cleansing and structural improvements of *bustees*. This amount was indicated as the *minimum* limit of expenditure upon one important branch of sanitary reform, and it

* It shall be the duty of the Commissioners, and they are hereby required to—

- (4) complete and extend throughout the town the new underground drainage works now under construction, and for that purpose to expend annually a sum, being not less than one lakh and a half of rupees, or with the sanction of the Local Government any sum less than the above amount.

is for the Local Government to consider whether a minimum outlay on this and other main branches of sanitary expenditure might not be safeguarded by law in the same manner as the minimum outlay on drainage is safeguarded by clause 4 of section 27* of the Municipal Act.

The benefits of sanitary reform are so immediate and real, that the existing generation of citizens may well be content to bear their full share of the burden of cost. It is scarcely too much to say, as the Army Sanitary Commission once observed, that the value of a single year's loss of productive labour which the existence of the present acknowledged evil entails upon the city would go far to pay for their entire removal. It must also be remembered that the trade of India with Europe is seriously hampered at present by quarantine regulations which rest for their supposed

justification upon the continued prevalence of cholera in our large ports and especially in Calcutta, which is regarded as the *nidus* of this disease. Every re-appearance of the malady with anything like epidemic prevalency is at once followed by fresh restrictions upon trade, and it is hopeless to attempt to get these removed or reduced to a minimum until the progress of sanitary reform has broken down the epidemic character of the disease by reducing locally the liability to personal seizure. The history of Western epidemic diseases, as remarked by the Army Sanitary Commission on the Calcutta Report for 1876, warrants the anticipation of this result.

12. The Governor-General in Council trusts that for the future the public spirit of the Commissioners will lead them fully to recognise these facts, and that their action will place it out of the power of any outside critics to impute to them indifference or failure to justify the confidence of Government in entrusting to their hands the municipal arrangements of the metropolis of British India. The good effects which have undoubtedly resulted from what has already been done should encourage the Corporation to organize its operations upon a larger scale, and induce the community generally to bear cheerfully the heavy burden which the urgency of the reforms required plainly imposes on it. If in any respect the present law fails to give the Corporation itself adequate control over nuisances arising from the action or inaction of individuals, the local Legislature should be moved to amend it. For the reform of the milkmen's *bustees*, further powers appear certainly to be required. The executive of the municipality is entitled to have its hands strengthened in every reasonable way to enable it to grapple successfully with the task before it.

13. I am to add that the Report of the Special Commission will, with the connected papers, be forwarded for the information of Her Majesty's Secretary of State and of the Army Sanitary Commission.

14. The Governor-General in Council will await with interest the report of the Committee which the Lieutenant-Governor has appointed to consider the question of extending the boundaries of the town so as to embrace the more populous and important portions of the Suburbs.

No. 1668T—M, dated Darjeeling, the 9th September 1885.

From—J. WARE EDGAR, Esq., C.S.I., Offg. Secy. to the Govt. of Bengal, Munpl. Dept.,
To—The Chairman of the Corporation of the Town of Calcutta.

IN continuation of my letter No. 819T—M, dated the 1st July last, I am directed to forward, for the information of the Commissioners, copies of a

• No. 256, dated 31st ultimo.

letter* from the Government of India on the subject of the enquiry made by the Commission appointed by the Lieutenant-Governor under section 28 of Act IV (B.C.) of 1876, and

† Letter to the Government of India, Home Department, No. 824—M of the 1st July 1885.

of the letter† to which it refers. I am to observe that, although more than two months have elapsed since the date of my letter to your address, referred to above, no reply has yet been received on the subject. I am accordingly to enquire when the Corporation are likely to be in a position to furnish their answer.

No. 1671, dated Calcutta, the 24th September 1885.

From—**BABOO GOPAL LAUL MITTAR**, Offg. Chairman of the Corporation of Calcutta,

To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to acknowledge the receipt of Government letter No. 819-TM, dated 1st July 1885.

2. The letter was laid in due course before the Town Council, and in accordance with the Resolution passed by the Council, it was submitted for the consideration of the Commissioners at a Special General Meeting held on the 30th July last. At that Meeting the following Resolution was passed:—"That a Committee be appointed to consider the letter from the Government of Bengal, No. 819-TM, dated 1st July 1885, to suggest what course the Commissioners should pursue with regard to that communication, and to draft a reply for approval by the Commissioners in Meeting." The reply to Government was placed before the Special General Meeting held yesterday, and approved.

3. The Commissioners notice with satisfaction the recognition by His Honor the Lieutenant-Governor of "the substantial progress in sanitary matters which has been made of late years by the Corporation, and especially by the present body of Commissioners." They are aware that a vast amount of work lies before them in the way of sanitary reform, and they are fully impressed with the responsibility which attaches to them so long as the insanitary conditions, which still prevail in many parts of the town, are not completely removed. It may be observed that their efforts in this direction have been steady and sincere and, with due regard to the means at their disposal, successful. It is not necessary to recapitulate, in this letter, all the works that were done in the course of the last official year. This has been fully detailed in the Administration Report of that year, but the Commissioners would refer to some of them, if only to shew that they fully appreciate the importance of the question of sanitary reform. Thirty-four bustees engaged the attention of the Commissioners. The works in respect of eight of these have been completed. Permanent arrangements have been made for the proper conservancy of the entire area of 207 bustees. Twenty-nine tanks were filled up and obliterated, besides four which were filled up by the owners. Though the law does not give the Corporation the power to close wells, 68, which were in a most insanitary condition, were closed by the exertions of the Health Department. The project of the underground drainage of Hastings was sanctioned, and the supplementary works connected with the sewerage of the town, which had nearly been completed (with the exception of Bang Bazar and Hastings), were being carried on at a cost of Rs. 1,20,608. The works for the extension of the filtered water-supply were pushed on with vigor. The pumping station at Mullick's Ghât for the distribution of unfiltered supply was placed in working order by the construction of a jetty, and the existing pipes being found insufficient to carry the full supply, the substitution of larger pipes was commenced at the close of the year. To remedy the foul condition of cowsheds, 1,760 prosecutions were instituted, and of the 550 cowsheds in the town, more than half were connected with the sewer, and the drainage of 88 was placed on a satisfactory footing. Two model cattle sheds, capable of holding 72 cattle, were erected in Jorabagan and Kalabagan at a cost of Rs. 17,412-10-4. The construction of bathing platforms was pushed on steadily, and 28 were in working order at the end of the year. The difficulty which the Commissioners experienced was in the selection of proper sites, and the existing partial extension of the unfiltered supply. A scheme for the extension of the supply to the principal streets is now under the consideration of the Commissioners, and on the completion of the works, they will be in a position to construct these platforms in all parts of the town. They have been a boon to the lower classes, and the Commissioners feel the necessity of increasing their number so as to bring them within the reach of the residents of all the bustees. The scheme for the drainage of the area to the north of Bang Bazar Street has been completed, and is now occupying the attention of the Town Council.

4. The Commission under Section 23 did not, as observed in the Government letter under acknowledgment, confine themselves to the strict letter of the law. Their recommendations were made with a view to giving a "complete account of the requirements of the town," though some of them were beyond the powers of the Corporation to give effect to, and others were "wanting in precision and definiteness." The Commissioners treated these recommendations with the respect which was due to such high authorities as Mr. Beverley and the chief sanitary officer of the Province, and though they were of opinion that the recommendations were not such as could be enforced under the provisions of Section 29 of Act IV (B. C.) of 1876, they adopted most of them with willingness.

5. The Government letter in paragraph 6 observes:—"The Lieutenant-Governor regrets to find no reference in your letter to the important subject of finance, which is discussed in paragraphs 139 to 142 of the Commission's report, and which, for obvious reasons, underlies the whole of its most important recommendations." The Commissioners would beg to observe that there was no desire on their part to avoid this important subject, and they gladly avail themselves of this opportunity of fully entering into it. Under Section 25 of the Calcutta Municipal Consolidation Act, 1876, all funds received or raised by the Commissioners are declared to be applicable to the purposes expressly authorised by that Act, and the Section which follows declares the purposes to which the same may be applied, but so far as the occupier rates are concerned (*vide* Sections 160, 165 and 192 of the Act), the application of the proceeds thereof is restricted to the immediate purposes for which those rates are respectively levied. The only fund, which is thus available for all other purposes, is the General Fund, which is principally composed of the house-rate, license fees from trades and carriages, fines and penalties, tramway receipts, fees for removal of business refuse, night-soil fees, receipts from the Slaughter-house and the Municipal Markets, &c. The other sources of income being practically fixed, there remains the house-rate, from the proceeds of which alone the General Fund may be augmented. Your letter observes that, in settling their Budget for 1883-84, the Commissioners rejected the proposals of their executive that the house-rate should be fixed at the maximum of 10 per cent., and reduced expenditure by 3½ lakhs of rupees, of which Rs. 2,93,100 was cut out of the estimates from various conservancy departments, and again that the house-rate of the current year has been fixed at 7½ per cent. It may here be pointed out that the reference to the reduction relates to the year 1884-85 and not to the year 1883-84. Be that as it may, the Commissioners regret that there should be any misapprehension on the subject. The estimates of expenditure are fixed in the first instance, and in the presence of the executive officers, and usually with their consent. Before that is done, the Committee appointed for the purpose of settling the Budget estimates minutely enter into the past expenditure of several years, and the requirements of the year for which the Budget is framed. They then fix the estimates of all other sources of income, leaving the house-rate to be considered last, and it is not until every requirement has been provided for, and every income from other sources considered, that the house-rate is fixed. As regards the reductions in the Budget estimates for 1884-85, the Commissioners did not depart from the usual practice of former years. That they were perfectly justified in making the reductions will be evident from the fact that even the estimates as reduced could not, during the year, be fully worked out; and it has been the invariable practice of the Commissioners to raise the sanctioned grant whenever just grounds are brought forward, and they observe with satisfaction that the majority of the members of the Commission correctly represent that the Commissioners, "while insisting on the integrity of the Budget system as regards their officers, have not always thought it necessary to regard it as a hard-and-fast rule for themselves." Adverting to the subject of these reductions, Mr. Harrison, at the Special General Meeting of the Commissioners, held on the 26th of February 1885, observed as follows:—

In presenting this budget he wished to say a few words to remove certain misapprehensions which had prevailed at the time when last year's budget was presented, from the fact that the expenditure side of the draft budget was 3½ lakhs in excess of the budget as it was passed by the Commissioners. That gave rise to criticisms from two opposite quarters, one

that the budget prepared by the executive was an extravagant budget; the other that the grant passed by the Commissioners was insufficient, being 8½ lakhs less than what was considered necessary by the executive. Neither of these criticisms was entirely correct. A budget as passed contained what might be considered the necessary provision for the year together with such desirable additions as occurred reasonable. But in framing the budget, the executive had to include not only what might really be considered necessary, but also what was considered desirable if funds were available, but which no one considered necessary. He had to consider not only all that was necessary, but improvements, alterations, new buildings, &c., which the officers in charge of the departments considered desirable. The consequence was that the budget always contained a good deal which no single person considered, and he himself did not consider absolutely necessary. He saw no harm in putting before the Commissioners a large proportion of desirable improvements. He had therefore always proceeded on the principle of keeping in the budget estimates for all reasonable improvements, not intending that the Budget Committee should pass them all, but that they should exercise the discretionary power of passing what they considered most important. At the same time, in this present year, the Municipality enjoyed the advantage of having resources which they never had in any previous year. They were not only relieved from the payment of interest on 25 lakhs of 8 per cent. debentures, but the assessment on property had increased so substantially that the rates and taxes would themselves produce an appreciable increase of that income; and therefore from both these sources a great deal more money would be available this year. He had been very careful to include in the budget only such items as he considered most desirable; at the same time he was far from saying that everything entered in the budget was necessary, but he did think, looking at the funds which would be available, that a large proportion of them was desirable.

And again, at the Meeting held on the 30th March 1885, after the Budget estimates of the current year were framed, Mr. Harrison remarked as follows, with special reference to the 7½ per cent. house rate:—

They would all admit that this was perhaps the most satisfactory budget yet laid before the Commissioners since the present Municipal Act was passed. He said that, because on the one hand, it practically conceded all that had been asked for by the executive departments, and, on the other hand, it did so without any necessity for raising the house-rate, which formed what was the back bone of the General Fund for all general expenditure above 7½ per cent. He might recall to their minds the discussion which took place at the end of 1881, when there was a question whether the rate for that year should be lowered to 7 per cent., or not. In advocating the not lowering of it, he said that, even at 7½ per cent. there was a slight deficit, and his arguments were thus recorded in the proceedings of that Meeting: "Even at 7½ per cent. an equilibrium could not be maintained, there would be a slight deficiency, and he thought therefore that the true interests of the rate-payers was to endeavour to maintain the house-rate at 7½ per cent. There was a possibility, he might say, a probability, that with the 7½ per cent. the Commissioners might with economy be able to maintain an equilibrium, but if the rate was lowered, there was a moral certainty that the rate must be raised next year to 8 per cent.," and in conclusion, he said on that occasion that "if the rate was kept at 7½ per cent. gradually as the town improved, the income of the Municipality would be sufficiently elastic, and with strict economy that rate might permanently suffice."

C. The Commissioners have no hesitation in saying that the well-being of the Municipality depends upon an efficient control, rigorously maintained, over the various items of expenditure, and it is because this control is maintained over the finances that they are in a position to lay out large sums of money on substantial improvements. It will be remembered that when the administration of the Municipality was handed over to the Commissioners under the present law, they inherited a legacy in the shape of a deficit of a large sum of money, but their position has since changed very much for the better. They have spent considerable sums of money on improvements, and yet their financial position is perfectly solvent. It has been stated that the "resources at the disposal of the Commissioners have not been utilized to the utmost," that the house-rate has been kept at 7½ per cent., while the law gives the Corporation the power to raise it to 10 per cent., and that the Commissioners have failed to avail themselves of the maximum amount which they can and ought to apply to the improvement of the town. It is necessary, therefore, that the circumstances which have hitherto influenced the Commissioners in this matter should be stated. The number of premises which are assessed for the purpose of levying the house-rate is 42,500. Of these 24,361 are assessed on an annual valuation of less than Rs. 108, as shewn in the annexed statement. The number of premises, the annual valuation of which ranges from Rs. 61 to Rs. 108, is 5,745, and consists of 2,412* huts and 3,333 pucca premises. The number assessed at below Rs. 60 (less than Rs. 5 per month) is 18,616, or

* When empty land is leased out to a tenant and he builds on it, the building is called a hut in the Assessment Register. The landlord pay the house-rate on the land, and the tenant pays the House, Water, Police and Lighting rates on the hut.

considerably more than one-third of the total number of premises in the town. These consist of 15,753 huts and 2,868 pucca premises. The poverty of a large class of residents thus admits of no doubt, and when it is considered that most of them have to pay not only the house-rate but the other rates also, it cannot but be conceded that the burden of taxation, even as imposed on them at present, is extremely heavy. His Honor, in recommending the free use of public latrines, has had his attention direct to the poverty of a large class of residents. "There are large classes of persons," says the Government letter, "resident within the town whose circumstances will not permit them to pay any charge, however small, for the use of a latrine; these people have no alternative, in the absence of free accommodation, but to resort to the lanes and open spaces in the neighbourhood of their own houses; nor is it possible to prevent it by any measure of practical severity." The Commissioners submit that an increase in the house-rate, which, under the present law, will not exempt any class of residents, will inflict a very great hardship, and should only be resorted to in case of absolute necessity. The Commissioners have been able, during the present year, with a house-rate at $7\frac{1}{2}$ per cent., to make provision for the improvement of the town to the extent desired by Government. This they have been able to do partly in consequence of the increase in the assessments of houses during the late revision, and much more by reason of a saving of over two lakhs of rupees, which has followed upon the repayment of the loan of 1864. But more is expected of them, and yet they must express with some degree of regret that they have not received from Government the relief which they prayed for in regard to the Police-rate. The Commissioners submitted a proposal to the Local Government to be relieved from contributing to the Police Fund, for the express purpose of spending a much larger amount, than what is now available, for the improvement of the town. Their proposal was that the Police-rate should be done away with, and in lieu thereof they should be authorised to raise another rate from the class who now pay that rate, for the purpose of devoting the principal portion of it for the improvement of the town. If this proposal had been accepted, all classes of the community would have borne their share for the improvement of the town: but this did not meet with the approval of Government, and the Commissioners have not yet been relieved from the contribution to the Police Fund. It does seem hard to the Commissioners that the concession to which they have a just claim is delayed by the Local Government, and yet they are asked to raise the house-rate for the purpose of doing more towards the improvement of the town. The Commissioners do not intend permanently to levy the house-rate at $7\frac{1}{2}$ per cent., but they will be prepared, from time to time, to adjust it to the necessary requirements of the town.

7. With reference to the recommendations alluded to in paragraph 8 of your letter, *viz.* (I) that unfiltered water be laid on to as many sewer-summits as possible, with a view to the more effectual flushing of pipe-sewers; (No. XI) that more rapid progress be made in the distribution of unfiltered water in the principal streets; (No. XIX) that wherever possible, privies should have unfiltered water laid on, and be connected with the sewers, and (No. XXII) that zemindary latrines be connected with the sewers and with the water-supply, the Commissioners observe that the adoption of these recommendations in their completeness depends upon the further extension of the unfiltered supply. Such a scheme, as has already been stated in paragraph 4, has been placed before the Water Supply Committee, and is now under their consideration. On the 30th May last, the Town Council passed the following Resolutions:— "That pipes of sufficient dimensions be laid down for the distribution of unfiltered water where it is most wanted, and that a list be submitted of all applications received for unfiltered supply connections, and that all such applications, together with all applications subsequently received, be considered and disposed of

by the Town Council." These Resolutions are being carried out. The additional streets, named in the margin, have been piped from 31st September 1884 to the 30th June 1885; a large number of public latrines and night-soil depôts have been supplied with unfiltered

1. Halliday Street and Kalabagan Bustee.

4. Mooktaran Baboo's Street.
5. Mitter's Lane.
6. Upper Chitpore Road, between Mooktaran Baboo's Street and Grey Street.
7. New Road, east of Jorabagan Bustee.
8. Bogg Street and Municipal Office Street.

water. The pipe sewers are flushed by means of carts, pumps and hose attachments, unfiltered water only being used for the purpose. This has been done regularly, but it is not possible to state what quantity of water has been used. The scheme for further extension, however, provides for flushing them more effectively and more promptly than is now the case. A copy of this scheme, as submitted by the Engineer, is herewith forwarded for the information of Government.

8. The recommendations of the Commission, regarding the de-watering and filling up of tanks, are being practically carried out. Besides the 33 tanks filled up in 1884-85, as mentioned above, it was found necessary to de-water three. During the last hot weather, when cholera made its appearance in some parts of the town, particular attention was directed to the condition of the tanks in the vicinity of the outbreak, and guards were placed near two or three which were considered most foul, and these were immediately de-watered. Ten tanks have been de-watered this year (1885). The Health Officer reports that "the state of the tanks is continually occupying the attention of the Health Department, and that not only in the hot weather, but in the cold, is a vigilant watch kept over them. Should unusual sickness of any kind, especially cholera, occur in the neighbourhood of a tank, measures are at once taken to have it de-watered, and in the usual routine of inspection, tanks that are observed to have become particularly foul, are brought to the notice of the Engineer for early action in the matter of filling up." The operation for filling-up tanks, which have already been condemned, will commence at the close of the rainy season.

9. The necessity for constructing a sufficient number of bathing platforms for the bustee population of the town is fully acknowledged by the Commissioners, and they agree with the Commission that platforms should be erected in those parts of the town where they are required, at least one being given to every large bustee. They also agree that it is desirable to construct at least 75 platforms before the end of the current year, and have issued instructions that this shall, if possible, be done. They have, however, to represent that the present unfiltered water supply limits the operation to those localities which are at sufficiently measureable distance from the pipes which have been laid down. Unavoidable delay is occasioned by the procedure prescribed by law for the acquisition of land, and the time which should be taken by the Collector under Act X of 1870 for making over possession to the Corporation, cannot be definitely fixed.

10. In paragraph 12 of your letter under reply, it is stated:—"So far from admitting that the freeing of the latrines may properly be deferred, because they have hitherto paid only a moderate percentage on their capital cost, the Lieutenant-Governor regards it as quite indefensible that they should be expected to yield any return whatever. But even if this were not the case, the argument, with which the Commissioners seek to justify their disregard of the recommendations of the Commission, would appear singularly unhappy in the face of the fact that they have for years past derived a handsome annual profit from the operation of the Night-soil Department." And again:—"The impropriety of working this Department so as to bring in a profit has been represented by the Chairman on more than one occasion, and has also been admitted by the Commissioners themselves. It is difficult, therefore, to reconcile their accepted views upon the question with their present hesitation to apply a small part of this profit to remove a very grave defect in their administration of the Department from which it accrues." It seems to the Commissioners that the question of freeing latrines is distinct from that of the realization of the night-soil fees. Before the present system, the night-soil was removed by tolah mehters, who paid to the Municipality, by way of fees, the annual sums, noted in the margin, for the years 1874 to 1876.

				Rs.
1874	28,200
1875	29,750
1876	44,542

The work not having been done by them in a satisfactory manner, the Commissioners, in 1877, introduced the present system, which, it must be admitted, has, on the whole, worked well. The accounts certainly show a surplus, as stated in your letter, but it does not follow that the whole of it represents a profit to the Corporation, for nothing is debited on account of contribution to the Health Officer's establishment.

In the current year, the sum of Rs. 23,678 has been debited under that head, so that the profit is really a great deal less than the amount mentioned. If their predecessors could receive fees from *tolah mehters*, the Commissioners do not see why they should not be justified in securing a surplus in the place of those fees, but if it is indefensible for them to derive any profit from this source, their obvious course is to reduce the fees for the benefit of those who pay them.

The question, whether the latrines should be made free or not, is a different one altogether. If the Commissioners were satisfied that the sanitary condition of the town would be very much improved by freeing the latrines, they would not hesitate to adopt the recommendation of the Commission. They must say that it was unfortunate that the members of the Commission did not take fuller evidence on the point, but having regard to the opinions expressed by the majority who signed the report, and the views of His Honor the Lieutenant-Governor, the Commissioners have resolved to make the existing latrines free tentatively for two years, and to construct three latrines for the exclusive use of females. They also agree with His Honor that it is desirable to construct more latrines, and have called on the executive to prepare estimates, and indicate sites, with a view to the erection of a latrine in every large bustee where there is no such accommodation at present, an improvement advocated in paragraph 91 of the Report of the Commission.

11. The views of the Commissioners on recommendation (XXXV) of the Commission have been stated in paragraph 36 of their letter to Government, dated the 4th May last. The organization of the Health Department will be reconsidered by them on the appointment of a whole-time Health Officer.

12. The question of the amalgamation of the Town with the Suburbs is now under the consideration of the Special Committee appointed by His Honor. Whether the whole or a portion of the Suburbs is ultimately included in the Town, there can be no doubt that fresh legislation will be necessary to define the constitution, the powers, and the duties of the new Municipality, and the Legislature will have to determine issues which will be of vital importance to the residents of the Town and of the Suburbs. The Commissioners will always be ready to offer such assistance to the Special Committee and to the Legislature as their past experience of the working of the present Municipal Act may lead them to think necessary, for the amendment of existing provisions or for the introduction of future reforms.

EXTENSION OF UNFILTERED WATER-SUPPLY.

TO THE OFFICIATING CHAIRMAN.

1. I have now the honor to submit the plan and detailed estimate for the full "extension of the unfiltered water-supply" from Mullick's Ghât amounting to Rs. 3,71,592 as follows:—

	Rs.	Rs.	Rs.
<i>Northern Division.</i>			
Main and sub-mains with ground hydrants and wash-outs	1,63,319		
Flushing branches to sewer-summits in piped streets ...	1,861		
Ditto ditto in side streets ...	53,670		
	<u>2,18,850</u>		
Deduct value of pipes to be taken up and relaid	18,669		
	<u>2,00,181</u>		
<i>Southern Division.</i>			
Mains and sub-mains with ground hydrants and wash-outs	89,164		
Flushing branches to sewer-summits in piped streets ...	2,009		
Ditto ditto in side streets ...	20,595		
	<u>1,11,768</u>		
Deduct value of pipes to be taken up and relaid	22,498		
	<u>89,270</u>		
			2,89,451
Providing hydrants for those streets which are already piped	32,141
Add for marginal item	50,000
Total of estimate Rs.	<u>3,71,592</u>

2. This extension is exclusively for distribution pipes, the mileage of which would be effected in the manner shewn by the following figures:—

<i>Northern Division.</i> —Length of existing pipes ...				16 77
Net length of pipes now proposed to be laid ...				8 78
				<u>25 55</u>
Add for flushing branches to side streets ...				12 34
				<u>37 93</u>
<i>Southern Division.</i> —Length of existing pipes (exclusive of 1·12 miles to the drainage pumping station and slaughter-houses) ...				17 01
Net length of pipes now proposed to be laid ...				5 20
				<u>22 21</u>
Add for flushing branches to side streets ...				4 59
				<u>26 80</u>
Total mileage ...				<u>64 73</u>

That is to say, there are 33·78 miles of streets piped at present, and the proposed extension is to be 30·95 miles more. Of the existing pipes the 20-inch and 12-inch mains running down Bow Bazar Street (the dividing line between the northern and southern divisions of the town) supply half of wards 7, 8, 9 of the northern division besides the whole of the southern. With this exception, however, the northern division has till now been entirely without large supply mains, and has merely been provided with small pipes which have been laid down from time to time in a tentative manner and with limited regard to a

comprehensive system. Now that the demand for unfiltered water, in the northern division particularly, has been unmistakeably pronounced, it has become necessary to fully develop the resources contained in the new pumping power at Mullick's Ghât. With this view the estimate now submitted is the result of a thorough revision of the pipe plan *de novo*.

3. The principle upon which the scheme is based consists in *the demand for road watering*. This demand is by far the largest that takes place within a definite period, and that being satisfied, it is assumed that all other demands can be satisfied, with the general proviso that these other demands shall be complied with at other hours than those devoted to road-watering. To meet probable increase of demand, a margin of 16 per cent. has been allowed for in the northern division and 6 per cent. in the southern over present road-watering areas, there being more room for expansion in the north than in the south.

The method of calculation is this: it is assumed, from practical experiment, that a square yard of road surface in the hot weather requires one gallon of water for one effectual watering; there are two waterings daily, and the process of watering occupies two periods in the day of three hours each, so that each square yard of road surface as shown on the watering list is assigned 2 gallons of water to be supplied in 6 hours. This, with the marginal percentages as above added, works out to—

For northern division	640 cubic feet per minute.
For southern division	540 " "
			<hr/>
Total	1,220 cubic feet per minute.
			<hr/>
Equal to			7,600.6 gallons per minute.

which the Mullick's Ghât engines are capable of supplying by working at the rate of 27.54 revolutions per minute, which is within their capability. Up to the present these engines have not worked up to half this quantity.

4. Under the scheme now presented the following are among chief advantages which will be obtained:—

(1) Every street of 50 feet wide and upwards and several others to give equable distribution as shown by plan will be piped, and supplied with ground-hydrants at suitable intervals for watering the roads by hose. Thus a large number of watering carts will be set free, which can be utilized for the more effectual watering of streets, which at present are scantily treated, for the extension of road watering and for conveying flushing water to pipe sewers in streets and lanes not provided with pipes.

(3) Branch pipes with sluice-valves will be laid to every sewer-summit passed by the pipe lines for flushing purposes.

(4) Branch pipes will be laid up every side street off the pipe lines to the nearest sewer-summit in such side street for flushing purposes.

(5) Every bathing platform will be supplied with a branch pipe in place of the existing ferrule system, so as to ensure an abundant supply. The supply being under control, however, by means of stop-cocks and equilibrium ball-valves.

(6) Supply to house privies along all the pipe line can be given, provided the pressure requisite for road watering is not unduly reduced, and provided that when that pressure becomes unduly reduced, measures be adopted for not giving the house supply simultaneously with the road watering.

(7) A more abundant supply can be given to all public latrines, and latrines can be increased in number as may appear necessary. Night-soil depôts, until they become things of the past through the universal connection of privies and latrines with the sewers, can also be more abundantly supplied where necessary.

5. The flushing of pipe sewers and of the minor or tributary brick sewers will be brought completely under control, and independently of the increased domestic filtered supply in prospect. The improvement, consisting only of pipe-laying, can be carried into effect with far greater celerity than any of the works necessary for an increase to the filtered water-supply.

6. The total cost of the unfiltered water-supply to Calcutta, as far as I have been able to ascertain, is shown by the following figures:—

				Rs.
Chandpal scheme	2,46,869
Mullick's Ghât scheme to 30th June 1885	4,23,967
				<hr/>
		Total expended	...	6,70,836
To which add present estimate	3,71,592
				<hr/>
		Grand total cost	...	10,41,928
				<hr/>

This amount does not include the cost of the old pumping station at Nimtollah Ghât nor of the small station at Chandpal originally handed over by Government to the town. On the other hand, however, there is the set-off of Rs. 1,00,731, which amount has to be contributed by the Port Commissioners for removal of the station from Chandpal to Mullick's Ghât, and the sale of the old machinery and buildings at Chandpal, the proceeds of which have amounted to Rs. 7,909 from first to last.

7. In conclusion, I would mention that the specification of the pipes with the view to calling for tenders is being printed, and I would suggest that Messrs. Joseph Quick and Son, the lately appointed professional agents, be instructed to call for tenders from three or four well-known pipe founders, including Messrs. Cochrane Grove and Co., the contractors for the 48-inch main. I would further suggest that, if possible, advantage be taken of Mr. Harrison's presence in England to ask him to settle the contract in conference with Messrs. Joseph Quick and Son, on behalf of the Commissioners; thereby much time would be saved.

19th August 1885.

JAMES KIMBER, C.E.,
Engineer to the Corporation.

CORPORATION OF THE TOWN OF CALCUTTA.

EXTENSION OF UNFILTERED WATER-SUPPLY, 1885.

Engineer to the Corporation.

**RESOLUTION ON THE REPORT OF THE SANITARY COMMISSIONER
FOR BENGAL FOR THE YEAR 1884 INCLUDING THE REPORT
ON VACCINATION IN BENGAL FOR THE YEAR 1884-85.**

MUNICIPAL DEPARTMENT—SANITATION.

Darjeeling, the 31st October 1885.

RESOLUTION.

READ—

The Report of the Sanitary Commissioner for Bengal for the year 1884, including the Report on Vaccination in Bengal for the year 1884-85.

Read again—

The Reports for the previous year, and the Resolution recorded upon them.

The present Report is submitted by Dr. Lidderdale, who was in charge of the office of Sanitary Commissioner throughout the year. It was not received until the end of July, and the delay in its submission is said to have been chiefly due to irregularities in the office of the Sanitary Commissioner, which have since been removed. It is again urged that the 1st May, which is the date fixed for the submission of the report, is "too early a one, with which it is almost impossible to comply, and which does not give a fair time for the proper compilation and digest of statistical and other information given." No doubt the submission of the Vaccination Report with the Sanitary Report has much to do with the delay, since the former, unlike the latter which is for the calendar year, is for the official year which terminates on the 31st March, and there is barely time between that date and the 1st May to check and compile the reports and statistics of each circle of vaccination, and to submit a proper report on the whole in a printed form; but there appears to be no reason why, since returns of the work performed in each circle are now submitted monthly, and the vaccinating season has been curtailed, the annual report cannot be drawn up and submitted much earlier than it has been for the last three years. Its earlier submission would certainly be facilitated by a reduction in its bulk. The length of the report has steadily increased during the last four years. The report for 1881 occupied 73 pages (exclusive of appendices and tables); that for 1884 has extended to 187 pages. In the Resolution on the Report for 1883, the disproportionate attention paid to vaccination by the Sanitary Department was commented upon. But this subject occupies 64 pages in the present report, as against 37 in the report for the previous year. Several other subjects are treated at needless length; and while the Lieutenant-Governor fully recognizes the care and industry bestowed on its preparation, he is satisfied that it would be an advantage to every one if, with the omission of a great mass of details, the necessary information could be compressed into a smaller compass.

2. The year 1884 was characterised by drought in nearly all the districts of the Province, particularly those of the Burdwan and Patna Divisions, where the distress among the people was so great as to necessitate the adoption of special relief measures which were carried on to the end of the year. In Durbhunga a grant of Rs. 5,000 in aid of the road cess funds was sanctioned by Government for expenditure on relief works, and the Board of Revenue were authorized to suspend the collection of rent in those Government estates in the district of Gya in which distress was anticipated by reason of the failure of crops. The rainfall, which was unseasonable and irregularly distributed, was again much below the average, being 57.56 inches against 64.70 inches, the average of previous years, and, as a consequence, the harvest partially failed, giving rise to a considerable advance in the prices of food-grains, particularly common rice, the price of which rose from Rs. 1-10-6

per maund, the average of previous years, to Rs. 2-8-1 per maund in 1884. Notwithstanding the great scarcity and the high prices of food, it is a noticeable feature in the sanitary history of the year that the health of the people throughout the Province does not seem to have suffered. The Sanitary Commissioner records the opinion "that the prejudicial effects of a diminished food-supply with high prices were more than counterbalanced by a comparatively drier season proving beneficial to health."

3. Some advance was made in the registration of vital statistics during the year. The ratio of births per mille of population was 23·51 against 22·08, and that of deaths 20·83 against 18·82. The recorded death-rate, which is still of course very far from being accurate, is considered to be an indication of marked improvement in the registration of mortuary statistics, inasmuch as there was no unusual general epidemic prevalence of sickness to cause an increase in the number of deaths, and, according to local reports, "many deaths were unreported owing to chowkidars having left their villages to seek a livelihood elsewhere, by other labour, in consequence of high prices of food-grains caused by deficient rainfall having injured the crops." The Lieutenant-Governor is disposed to agree with the Sanitary Commissioner in referring almost the whole of the increase to improved registration. It is beyond question that public health was far better in 1884 than in 1882, when cholera raged with unwonted severity, and a deadly wave of fever passed over the greater part of the Province, yet the recorded death-rate in the past year (20·83) exceeds that recorded for 1882 (20·41) by '42. The districts in which a marked improvement in registration is noticeable are Pubna, Balasore, Sarun, Faridpore and Monghyr. In Sarun, where the number of deaths recorded rose from 34,972 in 1883 to 49,971 in 1884, the *hath-chitti* or hand-book system was introduced, and is said to have worked satisfactorily.

4. During the year under review the provisions of the Compulsory Registration Act IV (B.C.) of 1873 were extended to the Bansberiah Municipality, in the district of Hooghly, and the Naihatti Municipality, in the district of the 24-Pergunnahs. The provisions of the Act, so far only as they relate to the registration of deaths, were also extended to the portion of the Darjeeling district which lies to the west of the river Teesta. The law is now in operation in 116 towns and one rural tract. Its provisions were, however, only enforced in 42 towns during the year. The total number of prosecutions was 396 with 316 convictions, against 297 prosecutions with 232 convictions in 1883. The largest number of prosecutions instituted was reached in Howrah, where 81 persons were tried for offences under the Act, 71 of whom were convicted. The results for the year show an improvement in the administration of the law, and the Lieutenant-Governor is pleased to learn that in some towns "the absence or paucity of prosecutions is due to the people spontaneously and regularly reporting the occurrence of births and deaths among them, and thus giving no occasion for the exercise of the clause of the law, prescribing a penalty for evasions, and that, moreover, in some municipalities special agency has been engaged to detect cases of non-compliance by the people with the requirements of the law." The Lieutenant-Governor recognises the fact that, so long as the work of registration in municipalities is done by the police, Municipal Commissioners are not likely to take any active interest in the subject. He is glad therefore to learn that several municipalities have already taken this work into their own hands, and he trusts that, as this practice becomes more general, the co-operation of the Municipal Commissioners will ensure rapid improvement in the registration of vital statistics in their respective towns.

5. The registration of births was carried on in 47 towns with a total population of 1,685,651 persons during the year, against 46 towns with a total population of 1,685,159 in 1883. The recorded number of births, exclusive of 1,437 children still-born, was 39,640, or a ratio of 23·51 per mille of the total population under registration, against 37,215, or a ratio of 22·08 recorded in the previous year. The record of the number of births is still very defective, and, compared with the number of deaths recorded in the same area, it is

shown to be less by 10,709, or a ratio of 6·35 per mille of population. The following are the towns in which the best results were obtained :—

	1884.	1883.		1884.	1883.
Jamalnore in Monghyr	40'39	49'17	Bankura	33'55	34'23
Kendrapara	44'91	25'54	Revilgunge	32'41	27'29
Brahmanberia	37'45	34'46	Serampore	31'02	26'79
Bottiah	35'17	30'47	Durbhunga	29'57	24'33
Jamalnore in Mymensingh	34'49	34'24	Gya	29'41	29'38
Bhagulpore	33'88	33'04			

In all these towns, with the exception of Bhagulpore, Serampore, and Gya, the recorded number of births exceeded the number of deaths. The percentage of male to female births was 116 against 114 in the previous year.

6. Of a total population of 66,163,884 persons within the area in which the registration of deaths was carried on, 1,378,610, exclusive of 20,015 still-born children, were reported to have died during the year, showing an increase of 132,934 compared with the number reported to have died in the previous year. The ratio of deaths to population was 20·83 against 18·82 in 1883. The increase in the death-rate was, as noticed above, mainly due to greater interest having been taken in the registration of deaths, especially in the rural circles. The following table exhibits the death-rate from specific causes for the year under review, compared with that for the previous year and the quinquennium 1879—83 :—

NAME OF DISEASE.	PROPORTION OF DEATHS PER 1,000 OF POPULATION.								
	In 1884.			In 1883.			In 1879—83.		
	Urban.	Rural.	Province.	Urban.	Rural.	Province.	Urban.	Rural.	Province.
Cholera	3'81	1'06	2'03	3'64	1'27	1'36	3'47	1'52	1'59
Small-pox	1'10	24	28	27	14	14	65	27	28
Fevers	12'80	14'06	14'00	13'77	13'81	13'81	18'50	12'26	12'38
Bowel-complaints	3'24	70	88	3'54	75	83	3'89	70	82
Injury	44	36	37	40	36	35	42	33	33
Other causes	5'01	2'54	2'06	5'64	2'18	2'30	5'79	1'73	1'89
Total of all causes ...	27'43	20'58	20'83	27'28	18'49	18'82	29'72	16'82	17'30

There was an increase in the mortality recorded under every head of disease, especially under cholera, fevers, and the maladies classed under "other causes." Most of the increase was contributed by the rural circles. The Sanitary Commissioner observes that, "where registration has been improved, the opinion is growing that the rural circles, characterized by the existence in them of unchecked morbid influences stimulated by primitive filthiness of habits of the people, &c., are unhealthier than the urban circles in which corrective precautions are observed." The experience of the year again showed that the fourth quarter of the year, immediately after the rains, is the most fatal to life. The two worst months were November and December, and October came fourth in the death-scale, the most prevalent diseases being, as usual, fevers and bowel-complaints. The months of April and May were marked by the prevalence of cholera and small-pox, which caused the death-rate for these months to rise considerably above the death-rate for the same months in the previous year. The mortality among infants was higher than usual, the ratio having been 117·90 against 99·22 in 1883. The death-rates per mille of population according to class or nationality were—Christians 13·61, Hindus 20·26, Mahomedans 22·48, Buddhists 13·79, and "Other races" 15·21.

7. As in the previous year, the birth-rate in Calcutta was lower and the death-rate higher than in the other Bengal towns. The ratio of births was 19·13 and of deaths 30·59. The increase in the number of deaths occurred under cholera and "Other causes." The mortality in the cantonments in Bengal, among a total population of 33,346, rose from 21·50 per mille in 1883 to 24·35 per mille in 1884. The mortality was again highest in the Hazaribagh Cantonment, where the death-rate rose from 61·16 per mille in 1883 to 129·41 per mille in the year under review. Of 21,182

European seamen who visited the Port of Calcutta during the year, 2,026 were admitted into hospital, of whom 76 died from various causes, chiefly from cholera, the number of deaths from which cause was 36. Besides these, there were 31 deaths which occurred out of hospital. Compared with the statistics of the previous year, the death rate among the European port population was 63·53 per mille against 48·92. Of the native floating population estimated at 25,409 at the census of 1881, 301 resorted to hospital, of whom 62 died while under treatment. Among this number 38 died from cholera. Outside hospital there were 135 deaths, 100 of which were from cholera. This disease appears to have afflicted the native floating population very severely, "the deaths from it amounting to no less than 70·05 per cent. of the total loss of the year."

8. During the year under review, cholera prevailed to a much greater extent, and with more fatal effect, than in the previous year. The number of deaths recorded was 134,421, or at the rate of 2·03 per mille of the registered population, against 90,439, or a rate of 1·36 per mile of population in 1883. The disease was "present in every district, and pervaded 24,621 villages against 16,316 in 1883, prevailing epidemically in 90 of the registering circles against 47, and with conspicuous severity in 90 against 64; while 432 against 491 circles enjoyed much immunity, and 37 against 46 were entirely free from the pest." Of the total number of deaths, 9,390 were contributed by the urban and 125,031 by the rural circles. The districts in which the disease prevailed with the greatest severity were Balasore (7·79), Nuddea (5·79), Faridpore (5·34), Moorshedabad (4·99), Rajshahye (4·95), Backergunge (4·03), Cuttack 4·16, Dacca (3·85), 24-Pergunnahs (3·57), Pooree (3·52), Jessore (3·38), and Pubna (3·36). In all these districts the death-rate was higher than in the previous year.

9. Thirty-four pages of the report are devoted to the history of cholera during the year; but the observations made in different districts appear to have led to no new discoveries on the subject. As usual, the disease was most fatal in the hot, dry months, and local insanitary conditions fostered its development. With a few exceptions, all the northern districts were comparatively free from it. It is a common idea that the disease is disseminated by pilgrims who carry it with them in their journeyings from district to district. This point was made the subject of special investigation by the Sanitary Commissioner, who, after a careful examination of the cholera statistics of those districts which are traversed by pilgrims, records the following opinion:—

"I think it unfair to infer that cholera is disseminated by pilgrims *per se*, or that they communicate the disease wherever they go. The fact is that when cholera, engendered by causes not yet definitely determined, and fostered by climatic influences or local insanitary conditions, is prevailing in any locality, pilgrims, if present there, suffer in common with the local residents, often more severely owing to fatigue, old age, debility, bad food or water, crowding, &c; but they do not import or communicate the disease. They, however, continue to suffer during their onward journey, if the wave of the disease is travelling in the same direction, and the people residing in the localities traversed by this wave also suffer along with them. The disease appears in places far removed from pilgrim routes, and it is during the dry months that it prevails with intense severity, generally in every district in Bengal Proper, whether pilgrims are present in them or not during that period."

A remarkable circumstance in the cholera history of the year is that in a very few instances was the disease found to have manifested itself in the crowds of people who assembled at the public fairs held for days together in the districts. This is attributed to the sanitary precautions adopted. Some noteworthy efforts were made to arrest the progress of cholera in places where it appeared in a virulent form. Special mention is made of the measures adopted by Mr. Collier, the Sub-Divisional Officer, and Dr. Barker, the Civil Surgeon of Serampore, and of the help rendered them by Mr. Finlay of the Hastings Jute Mills, in mitigating the severity and checking the spread of the disease in that town. The remarks made by the Sanitary Commissioner in paragraph 93 of his report, regarding the necessity for an improved water-supply at Pooree, have been communicated to the Public Works Department, and the question will be considered by the Lieutenant-Governor when at Pooree during his approaching visit to Orissa.

10. In examining the cholera mortality in the 24-Pergunnahs during the year 1884, the Sanitary Commissioner remarks—

"The Suburbs of Calcutta again heads the list with an increase in mortality of nearly one per 1,000 of population, as compared with the death-rate of 1883. The mohullahs in it which formed the scene of greatest suffering were Baliaghatta, Entally, Bhowanipore and Watgunge. This Municipality was specially inspected by me and found in an extremely insanitary condition. A report embodying the defects and indicating remedies was sent to the Commissioners, and a copy thereof submitted to Government. An abstract of this report, with a note of the action taken by the Commissioners on the suggestions therein made, will be found in Appendix III to this report. Some of the officers of the Vaccination Department visited the Suburbs of Calcutta and several of the other localities where exceptional mortality from cholera occurred. Assistant Surgeon Priumber Mitter, Deputy Superintendent of Vaccination, Metropolitan Circles, records the following observations in connection with some localities in the Suburbs and in the North and South Suburban Towns. *Manicktollah* is the most filthy part of the Suburbs, the land behind houses being used as public latrines. In fact, all the bustees in this area are in an extremely insanitary condition from *feces* and house refuse lying on the roadsides, lanes and bye-lanes and the ponds, hollows, and low lands being the receptacles of liquid sewage and filth. *Garden Reach*.—All the bustees here are in a similar insanitary condition with regard to conservancy, drainage, roads, &c. *Sett Bagan and Ghose Bazar*.—In these and the neighbouring bustees foul water holes, containing decaying vegetation, abounded; there are many filthy private privies; the water in two large tanks was filthy, green in colour and turbid, and two of the smaller ones were covered with decomposing plants, their sides lined with rank vegetation, the water in them 'appearing like vegetable decoction emitting disagreeable odour.' *Ballygunge*.—Here the waste lands were found to be covered with litter and other refuse, and were resorted to for defecation. *Gangarambusti and Wolfutbazar*.—These were found in their usual state of uncleanliness without any arrangement for the removal of sewage and refuse. *Matiabrooj, Mooriali and Kanchisharuk* were so crowded as to prevent free perfilation of air, and their courtyards and compounds were extremely filthy. In *Ekbulpore* some of the drains were filthy and obstructed, and the cowsheds full of decomposing litter and refuse. *Baniapooker*.—Here the drains were filthy and emitted a sickening odour, and the ditches and low lands covered with *feces*, rank vegetation and refuse of every description. The water-supply in all its bustees was bad, drinking-water being taken without any regard as to its quality; many of the houses were deficient in ventilation, the ground about them damp, and no arrangements existed with regard to house scavenging. *Bhowanipore*.—This place was in an indescribably insanitary condition, and its bustees do not admit of free scavenging. The tanks are foul and the drains, with few exceptions, are defective in level. *Watgunge*.—Some of the ditches here contained weeds, house sweepings, and human excreta, and the receptacles in one of the latrines were overflowing with *feces* emitting an abominable odour. *Kalighat in Tollygunge*.—Although some improvements had been effected, the sanitary condition of this locality is yet very defective with regard to scavenging, cleanliness, ventilation and crowding of huts. The latrines were most filthy, the vessels in them overflowing with decomposed bubbling *feces* seats unclean, and the latrine too near a much-used tank belonging to the police. The remarks of Dr. Ghose, the Officiating Deputy Sanitary Commissioner of the Metropolitan Circles, who also visited most of the above-named localities, are equally condemnatory. His reports also expose many extremely insanitary conditions obtaining at Cossipore, Baranagore, Barripore and Joynuggur thanas, and Baraset Municipality. I would be extending my Report to an undesirable length were I to reproduce all the defects disclosed in the reports of the Officers of the Vaccination Department. It will suffice to say that the above description applies *mutatis mutandis* to several other localities in the Suburbs, one of the largest and most important of the Municipalities in Bengal, and to other towns and thanas in the Province. It may be noted here that some judicious recommendations made by Dr. Ghose, after careful inquiry and inspection of several bustees in the Suburbs, do not appear from his later reports to have been followed by any action on the part of the municipal authorities."

It seems to the Lieutenant-Governor that it would be impossible for Government to approach the subject of a removal of these horrible conditions in different parts of the Suburban Municipality till the question of amalgamation is settled. At the same time he is convinced that, if the Suburban Municipality is unable or unwilling to cope with the state of things revealed by the Sanitary Commissioner's report, it is only by the amalgamation that any effective reform can be secured.

These remarks, together with a copy of paragraph 299 of the Report, will be communicated to the Committee appointed to consider the question of the amalgamation of a portion of the Suburbs with the town of Calcutta.

11. Small-pox prevailed in a more virulent form during the year 1884 than in the previous year. "The reported number of casualties amounted to 18,533 against 9,714 and the proportionate death-rate to population to 28 per mille against 14 per mille. The disease prevailed with more or less severity in

deaths, 2,711 were contributed by the urban and 15,822 by the rural circles. The areas in which the disease was most severely felt belonged to the districts of Gya (10), Sarun (8), Patna (7), Chumparun (5), and Hazaribagh (7). The districts of Gya and Sarun have not yet been brought under the operation of the Vaccination Act, and this no doubt accounts for the high death-rates returned by them. The same may be said of Chumparun, which has been only partially protected; and although Patna was reported to have been almost thoroughly protected, the number of deaths from small-pox in that district seems to contradict this statement. As in the previous year, the mortality was highest among children; no less than 72·27 per cent. of the total number of deaths were those of children under 12 years of age. The record of the seasonal incidence of the disease confirmed the experience of former years that small-pox is most prevalent during the hot months of March to June.

12. The total number of deaths from fever recorded during the year was 966,233, or a ratio of 14·60 per mille of the registered population, against 913,766, or a ratio of 13·81 in 1883. The registered mortality from this cause has steadily increased year after year since 1871, when the recorded number of deaths stood at 169,505, or a ratio of 2·56 per mille of population. With regard to this return, the Sanitary Commissioner states that the numerical increase is due to the facts revealed by improved registration, and that no circumstances have occurred to "justify the belief that the Province *generally* is getting more feverish than before." Of the total number of deaths, 584,893 were registered in Bengal Proper, 301,302 in Behar, 26,523 in Orissa, and 53,485 in Chota Nagpore. The death-rate per mille of population in each of these areas was 16·67, 13·02, 7·30, and 12·34 respectively. The districts which suffered most from fever were Rajshahye (30·40), Nuddea (29·22), Pubna (27·45), Jessore (22·41), Bogra (20·96), Gya (20·81), Moorshedabad (20·25), Beerbhoom (19·53), Burdwan (18·81), Khulna (18·52), Julpigorce (18·25), and Rungpore (17·09). The experience of the year again showed "that the severity of the disease begins and progresses in intensity after the rains have well set in, and is most virulent in January, October, November, and December, especially in the two latter months, when the evaporation of moisture from the sodden soil is rapid and the daily range of temperature considerable." As in the case of cholera, "the relationship of fever with the quantity of rainfall has always been a constant phenomenon." The local reports continue to show that fever is found to be most prevalent in those districts in which the soil is saturated with moisture, and the land is loaded with decaying organic matter owing to obstructed drainage due either to artificial deposits, or to the silting up of the beds of rivers and khals. It is no doubt true, as reported from many districts in Central and Eastern Bengal, that the process of silting is steadily going on throughout a very wide area, and extending its influence on health from year to year. The effect of drainage on fever is strikingly exemplified in the case of certain villages visited by Dr. Ghose, Officiating Deputy Sanitary Commissioner, in the Midnapore district. On the inner side of the embankment, along the right bank of the Roopnarayan river, is a group of well-drained villages, in which "no vestige of malarious cachexia, is to be seen in the people;" while on the outer side of the embankment, "the people of churs Najooreh and Bilkota living on *churs* generally inundated during the rains have well-marked signs of malarious disease in them." The Lieutenant-Governor notices the frequency with which the steeping of jute fibre in tanks and water-courses is spoken of in the present report as a harmful source of pollution of water, and consequently a probable cause of much disease. The matter is one to which local attention should also be specially directed, and the point should be specially noticed in the next report. The water-supply stations on the Eastern Bengal Railway were specially reported on in August 1884, in consequence of which measures have been taken by the Manager to improve the supply at some of the most important stations, and other improvements are in contemplation. The remarks of the Sanitary Commissioner regarding the silting up of the Kana and Sarasati nuddees in the Hooghly district will be considered in the Public Works Department.

13. The mortality during the year from "bowel-complaints," "injury," and "other diseases" was 58,376, 24,674, and 176,373 respectively. Compared with the statistics of the previous year, there was an increase under each

of these heads, though not to a very noticeable extent. Under "injury" the largest number of deaths are again shown to have been occasioned by snake-bites and attacks of wild beasts. The recorded mortality from this cause was 10,393 against 9,776 in 1883. Accidents stood high in the list of casualties, the number having been 10,078 against 8,727 in 1883. Among "other diseases," heat apoplexy and scurvy caused more suffering among the European seamen who visited the port during 1884 than in the previous year.

14. The work of the Vaccination Department continued to progress during the year, 1884-85. The total number of operations performed was 1,488,296 against 1,364,642, the number performed during the previous year, showing an increase of 123,654. Towards this increase the vaccination circles contributed 114,483 and the municipal area 9,171 operations, as exhibited in the following table:—

CIRCLES.	TOTAL NUMBER OF VACCINA- TIONS PERFORMED.		DIFFERENCE IN 1884-85.	
	In 1884-85.	In 1883-84.	Increase.	Decrease.
Calcutta	15,955	9,538	6,417
Metropolitan Circles	304,130	342,543	23,506
Bovine Vaccination Department, Calcutta	4,760	8,310	1,450
Suburbs of Calcutta, including cooly depôt	15,021	14,397	624
Total of Metropolitan Circles	323,911	365,250	25,670
Darjeeling Circle	229,500	221,536	8,024
Ranchi	148,972	144,293	2,699
Ranchal Pergunnahs	123,049	100,945	22,104
Eastern Bengal	307,079	351,016	43,937
Orissa	48,971	52,542	3,571
Benar	54,755	39,027	15,728
Total of Vaccination Circles	1,402,300	1,287,777	114,483
Municipalities, Dispensaries, &c.	86,036	76,805	9,171
GRAND TOTAL	1,488,296	1,364,642	123,654	5,571

Of the total number of operations in the year, 421,274 were performed by the Government agency, 976,226 by licensed agency, 4,760 by the Bovine Vaccination Department, and 86,036 by municipal vaccinators, dispensary medical officers, &c. Comparatively speaking, the largest amount of work was done by the Government vaccinators, each of whom performed on an average 1,280 operations. The licensed vaccinators performed on an average 915 operations each. It is believed that better results would have been obtained from the licensed system of vaccination, were it not for the difficulty which is experienced by the licensed vaccinators in realizing the fees for operations performed by them. It appears to the Lieutenant-Governor that this difficulty would not be felt, in places where the Compulsory Vaccination Act is in force, if in each case the fee were demanded before the operation was performed. The law, if rigidly enforced, would compel the people to seek vaccination, and the licensed vaccinators, to whom the people would have to go, would be able to refuse to perform the operation without prepayment. Protection was afforded for the first time by Government vaccinators to four thanas in the Tipperah district, two thanas in the Noakhally district, six thanas in the Cuttack district, and four thanas in the district of Shahabad. On the other hand, nine thanas in the district of Mymensingh, and the whole of the Patna district, were for the first time placed under the licensed system of vaccination, after having been traversed by the Government vaccinators. In addition to the areas protected in former years, the whole of the districts of Tipperah and Pubna, and parts of the districts of Manbhoon, Lohardugga, and Cuttack, were reported to have been thoroughly protected at the close of the season 1884-85. The Sanitary Commissioner, however, shows that the words "thorough protection" must not be construed too literally. Even in the Metropolitan Circles, in which the districts have been reported year after year to be "thoroughly protected," many whole villages have been found by Dr. Ghose, the Officiating Superintendent, which have up to this time successfully resisted vaccination. In the Midnapore district alone there are no less than 356 villages in which the whole or a large portion of the inhabitants are

still unprotected. Until the strong prejudices against vaccination, which still prevail in the minds of a considerable section of the population in all parts of the Province, are overcome, thorough protection, in the literal sense of the words, will be impracticable.

15. The following table exhibits the number of primary and secondary operations performed during the year 1884-85 in the different circles (including municipalities), and the percentage of successful cases under each:—

CIRCLES.	Total number of vaccinations	PRIMARY VACCINATIONS.			RE-VACCINATIONS.		
		Total.	Number successfully vaccinated.	Percentage of successful operations.	Total.	Number successfully vaccinated.	Percentage of successful operations.
Metropolitan	414 238	408 853	408 880	99.57	8,405	4,088	84.79
Darjeeling ..	254,465	254 180	251,780	99.45	271	207	76.38
Ranchi	150,066	150 879	146,877	99.48	87	68	63.55
Sonthal Pergunnahs	152 510	151,749	130,591	99.89	561	574	68.00
Eastern Bengal .	409 706	409 784	407,407	99.41	242	214	76.75
Orissa	51 167	51 140	49 508	96.41	177	62	35.53
Behar	76 301	74 857	71,773	97.31	404	164	34.67

The reason assigned for the comparatively small number of operations performed in the Orissa Circle is that the districts of Balasore and Pooree were excluded from the sphere of operations for the year, and that in some of the selected areas of the Cuttack district, vaccine operations had to be stopped in the middle of the season owing to an outbreak of cholera. In the Sonthal Pergunnahs Circle, where the work performed was unfavourably reported on in 1883-84, the number of operations rose considerably. The increase is said to have been caused by work having been carried on largely during the recess, to suppress outbreaks of small-pox in the Sonthal Pergunnahs, Bhagulpore, and Monghyr districts. It was also due in part to the exertions of the new Superintendent. The Lieutenant-Governor learns with regret that much of the work of the Government vaccinators in the district of Shahabad was retarded in consequence of an order issued by the Magistrate, permitting certain inoculators to vaccinate, and forbidding police interference with them. It appears that some of these men not only induced people to refuse vaccination by the Government vaccinators, but, under cover of the licenses granted to them, practised inoculation even in thanas where the prohibitory law is in force. The Lieutenant-Governor will await the result of the Sanitary Commissioner's enquiry into this matter. Compared with the figures of the previous year, there was an increase in the number of children brought under protection in the year 1884-85; but fewer adults were vaccinated than in the previous year.

16. During the year under review, the provisions of the Compulsory Vaccination Act were extended to the towns of Kotechandpore in Jessore, Deoghur, Sahebgunge, Dumka, and Rajmehal in the Sonthal Pergunnahs, Brahmanbaria and Commilla in Tipperah, Darjeeling, Cuttack, Bali in Howrah, Sherpore in Bogra, Patna, Durbhunga, Hazareebagh, Purneah, and Pooree, and to five thanas in Tipperah. The law is now in force in 81 towns, 4 cantonments, and 9 rural areas, and preliminary steps have been taken to extend it to the Chittagong and Sudharam municipalities. With a few exceptions, such as Gya, Monghyr, and Bhagulpore, the law met with comparatively less resistance in the places in which it was enforced during the year 1884-85 than in previous years. It is evident that the measure is being gradually more appreciated by the Mahomedans, and that the Rajpoots and Marwaris, who have always stoutly resisted it, are in many places less persistent in their opposition. In Burdwan, owing to the presence of small-pox, operations had to be carried on throughout the year, and it is stated that the Marwaris, who were at the outset strongly hostile to the measure, at last acquiesced and allowed their children to be vaccinated. Experience of the beneficial effects of vaccination is slowly, but surely, popularizing it wherever it is introduced: it is a work of time, and inoculation is still a powerful rival; but every year shows that the superiority of vaccination is more generally acknowledged.

17. A very large number of the operations during the year were performed with bovine lymph, which is still spoken of as "equal in operative power to humanized lymph." Its only drawback is that when stored in tubes it soon deteriorates, on account of the serum of blood which passes into the tube with the virus when squeezed from the vesicle on the calf, and when conveyed to long distances its efficacy is lost in consequence of this deterioration during transit. When used direct from the calf its efficacy is indisputable. On the whole, the work performed with this lymph was successful, and the Lieutenant-Governor is glad to learn that the prejudice against it entertained by the Hindus is dying out. The one great advantage which bovine lymph has over humanized lymph is that it is easily obtained, and that the supply is always equal to the demand.

18. The total amount expended on vaccination during the year 1884-85 was Rs. 1,51,448-14-4, exceeding the expenditure, in the previous year by Rs. 15,853-15-6. Of the total expenditure, Rs. 73,663-9 represent the cost of the operations performed by the Government vaccinators, Rs. 67,082-15-8 the cost of the establishment provided by Government for supervising the operations of the licensed vaccinators, and Rs. 10,702-5-3 the cost of vaccination to municipalities. In addition to the regular expenditure, Rs. 1,201-11, which were received as private contributions from various sources, were expended in aid of the work. The average cost of each successful operation performed by the Government vaccinators was 2 annas and 10 pies; that by the licensed vaccinators 1 anna and 1 pie; and that by the municipal agency 2 annas and 2 pies. On the whole, the average cost of each operation performed during the year was 1 anna and 8 pies, the same as it was in the previous year.

19. The percentages of municipal income expended on sanitary works and roads during the year 1884-85 were 38 and 19 against 34 and 18 respectively in the previous year. The districts in which the largest proportion of municipal income was devoted to improvements in sanitation were Julpigoree, Dacca, Hazaribagh, Burdwan, Pooree and Midnapore. The towns in the districts of Mymensing, Khulna, Bogra, and Noakholly were most deficient in this respect. The special purposes for which the municipal allotments for sanitation were expended during the year 1884, compared with the figures for the year 1883, are shown in the following statement:—

Nature of work.	Total cost.		Difference in 1884.	
	In 1884.	In 1883.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Conservancy, including latrines	8,99,298	8,07,931	91,368
Ditto, establishment	2,82,806	3,38,800	55,994
Drainage	1,05,973	80,097	25,876
Water-supply	1,86,291	1,60,449	25,842
Disposal of the dead	8,541	7,629	912
Markets and slaughter-houses	24,643	10,838	13,805
Vaccination	12,481	10,902	1,579
Treatment of the sick	1,87,186	1,80,339	6,847
Other sanitary works	75,087	63,080	12,007
Total	12,32,789	11,47,280	84,509	65,523
Construction, maintenance, and repairs of roads	6,28,578	6,06,160	22,418
Total including roads	18,61,367	17,53,440	1,07,927	65,523

There was an increase of expenditure under all heads except establishment and water-supply.

20. Among the important sanitary works carried out during the year 1884, the Burdwan water-supply takes a leading place. The water-works were formally opened by the Lieutenant-Governor on the 4th November, and the regular supply of water commenced from the 1st December 1884. The beneficial effect of the improved water-supply on the inhabitants of the northern portion of the town where the pipes are laid, 99 per cent. of whom are said to use the water, is unquestionable. The Lieutenant-Governor trusts that it will not be long before the supply is extended to the southern portion of the town, the inhabitants of which still resort to the Banks Nalla and the Eden Canal. Very slow progress appears to have been made with regard to the proposed

water-supply scheme for all the riparian municipalities on the right bank of the Hooghly from Howrah to Serampore. The services of a Government Engineer have been lent for the purpose of preparing the necessary estimates, and it is hoped that some definite project will be adopted before the close of the current year. A scheme of water-supply for the town of Bhagulpore has been sanctioned by Government, and the work is being carried on as rapidly as possible. Some attention was devoted to the improvement of drainage during the year, but very much still remains to be done in this direction, and the Lieutenant-Governor trusts that the suggestions made from time to time by the Sanitary Department on the subject will not be disregarded by the local bodies to whom they have been communicated. During the year 1884, much attention was paid by the Government to the insanitary condition of Calcutta and its Suburbs, and steps were taken with the view of remedying the evils which have been shown to exist.

21. The Lieutenant-Governor observes with satisfaction the improvement in the amount of sanitary work performed by the officers of the Vaccination Department. The record of the observations made by these officers is interesting, and cannot fail to help on the cause of sanitation. The work of the Department affects the well-being of some 68 millions of people; and if the progress is slow, the result is due to the apathy and, sometimes, hostility of the people to any measure of reform, and to the cost involved in any practical schemes of improvement. There is also the fact that outside of municipalities there is no law by which the officers of the Department can enforce their remedies. Even, however, if the advice given to the inhabitants of the villages inspected is not immediately followed by action, it is in itself an advantage to the Province to have so many qualified medical officers thoroughly acquainted with the sanitary condition of the areas under their charge; and with the introduction of the Local Self-Government Act, when funds are made available for local improvements, the question of village sanitation should, at any rate in the more advanced districts, be taken up in real earnest. The detailed remarks of the Sanitary Commissioner upon his subordinates will be communicated to the Appointment Department for information. Finally, the thanks of the Lieutenant-Governor are due to Dr. Lidderdale for his report, which, though too lengthy and diffuse, is full of interesting and valuable information.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Government of Bengal.

RESOLUTION ON THE FOREST ADMINISTRATION REPORT FOR 1884-85.

REVENUE DEPARTMENT—FORESTS.

Darjeeling, the 31st October 1885.

RESOLUTION.

READ—

The Progress Report of Forest Administration in Bengal for 1884-85.

The Report has been submitted by Mr. A. L. Home, who was in charge of the Department throughout the year. It reached Government considerably after the prescribed date—a fact which is not adequately explained by the circumstance that during part of the year the Conservator had executive charge of the Darjeeling Division in addition to his own office. Owing to the pressure of work in connection with the floods in Bengal, the consideration of the Report by Government has been unavoidably postponed.

The Report is full to a degree. Consisting of 52 quarto pages of text, besides 45 pages of tabular statements and appendices, it leaves no detail of the year's administration untouched. Numerous topics, which have formed the subject of separate correspondence during the year, are here again brought to notice, and the result is that in the mass of unimportant and uninteresting details, the broad facts of administration, which alone it was necessary to set forth, are obscured. The Lieutenant-Governor must confess to a feeling of dissatisfaction at the size to which the Forest, as well as other annual reports are extending. Whatever the merits of administration in any department may be, those merits are greatly enhanced, in the Lieutenant-Governor's judgment, by the capacity to record its results in a concise and clear narrative; and certainly if the report of one year's forest work in Bengal requires a big volume to itself, the Lieutenant-Governor looks with despair to the duty which would devolve upon him in any adoption of a triennial system of reports. Steps are now being taken to reduce the size of other reports, and Sir Rivers Thompson desires that the Conservator shall, for his part, submit a plan whereby in future the size of his report may be diminished, without sacrifice of what alone it is material for Government to receive in the shape of an Annual Forest Administration Report.

2. *Area of Forests.*—The following statement shows the areas of the various classes of forests superintended by the Department during the year under report:—

CLASS OF FOREST.					Area in acres.
Reserved	3,124,267
Protected	1,470,876
District	2,760,563
Total					7,355,236
Proposed reserves not included under either District or Protected forests	147,980
Total					7,503,186

The variations of these figures from the corresponding areas shown last year are inconsiderable, and call for no special comment.

The forest areas specified above lie chiefly on the declivities and at the foot of the Himalayas in the Darjeeling and Julpigoree districts, in the Chit-tagong district, in the Sunderbuns, and in the Chota Nagpore and Orissa Divisions. In addition, however, to the forests under State control or supervision, there are considerable private forests in Bankura and Midnapore in South-

Western Bengal, in the districts of Dacca and Mymensingh in Eastern Bengal, in Rungpore and Dinagepore in Northern Bengal, in Chumparun, in North Bihar, in Shahabad and Monghyr in South Behar, in the Sonthal Pergunnahs, in Chota Nagpore, and in Orissa. Very great benefit would undoubtedly accrue to the owners of these private forests, as well as to the country generally, from the adoption of a system of conservancy adapted to the circumstances of each case. Some owners have already shown an intelligent interest in the matter; and it is to be hoped that the special report which has been called for by the Government of India, in regard to the extent of private forests in these provinces, may lead to the general adoption of some simple rules of conservancy for the protection of these valuable properties. In this connection it may be mentioned that the Lieutenant-Governor has recently received a valuable report on the forests in the Chota Nagpore Division from the Inspector-General, Dr. Schlich. The report is under His Honor's consideration.

3. *Demarcation and Surveys and Working Plans.*—Some progress has been made during the year with the important work of forest demarcation and survey. The report for 1883-84 stated that the boundaries of 3,584 square miles of reserved forest had been completely surveyed, that the boundaries of 60 square miles had been partly surveyed, while the boundaries of 1,027 square miles remained untouched. The report under notice now shows that 130 miles of boundaries were newly demarcated at an average cost of Rs. 6-13 per mile, and 1,464 miles were re-cleared at a cost of Rs. 6-7 per mile. It is understood that, with slight exceptions, all the boundaries of the forests under the management of the Department were cleared, and the boundary marks repaired where necessary during the year. The total expenditure debited during the year to "Demarcation" was Rs. 10,309 (the cost per mile varying from Rs. 21-4 in the Buxa Division to Rs. 1-11 and Rs. 1-14 in the Singbhoom and Khoorda sub-divisions.) The Conservator is collecting information which will enable him to compile an accurate statement of the length of boundaries of all the forests under the management of the Department. When this is done, it will be convenient to show against each forest the progress made in surveys and re-clearances with respect to it.

4. In regard to working plans, that is, definite schemes of working to be adhered to over long periods of time, the Lieutenant-Governor had understood that such plans had been completed for the forests of the Darjeeling Division, and for some forests in the Buxa and Kurseong Divisions. It is, however, stated in the report that experiments are now being conducted "in a selected area of forest, with a view to obtaining the factors of conversion and other data necessary for the correct estimation of the growing stock on which the detailed working plan of the Darjeeling working circle will be based." This statement needs explanation.

5. *Establishments.*—At present there is a combined list of Forest Officers for Bengal and Assam—an arrangement which is not without its inconveniences. Several alterations in the strength of the staff occurred during the year, but the only change which need be noted here was the increase in the strength of the Sub-Assistant Conservator class. This increase was very necessary, but owing to the want of suitable candidates it has not yet been carried out in its entirety.

At the close of the year the subordinate establishment (excluding clerks, peons, and menials) consisted of 20 forest rangers (out of 27 sanctioned), 78 foresters, and 297 forest guards. A forest ranger had on an average 575 square miles of forest to supervise, a forester had 149 square miles, and a forest guard had 40 square miles to watch. These figures do not include the area of proposed reserves, and they indicate a probable cause of the small measure of success which in some forests have attended the efforts at fire prevention. The forest staff, to be effective, needs strengthening in its lower ranks.

The Conservator records a large increase in the number of prosecutions of members of the subordinate staff. Eleven officers were charged with criminal misconduct during the year, out of which number, however, five were acquitted or discharged, indicating, in the Lieutenant-Governor's opinion, the necessity for greater care in the institution of prosecutions, or in the method of conducting them. Other forest officers, besides those criminally prosecuted, were departmentally punished during the year, and it seems desirable that

the Conservator's enquiries should be directed into the causes of the apparent inferiority of a portion of the subordinate forest staff compared with the corresponding ranks in other departments of the public service.

6. *Breaches of Forest Law.*—During the year 443 cases of breach of the Forest Law were taken into court, and 800 cases were compounded. The total number of cases (1,243) is much below the corresponding number (2,229) for the preceding year, the falling off being due to the large decrease of compounded cases, which, in the Sunderbuns, were 602 only in number as against 1,698 in the preceding year. The Lieutenant-Governor is glad to learn from the Conservator that the decrease is due to better supervision resulting in fewer breaches of the law. The results of prosecutions, which have been most frequent in Darjeeling and Orissa, also show that cases are not brought into court without adequate reasons.

7. *Forest Fires.*—In this branch of work special measures were taken during the year to preserve from fire (>06,200 acres) 1,259 square miles of forest. Of that area, nevertheless, 279 square miles were burned, while 488 square miles of forest, not the subject of special protective measures, were also injured. The failure of protective measures may be localized to the Singbloom and Angul forests, where about 230 square miles, or nearly one-half of the protected area, was burnt. In these forests protection was first attempted during the year under report, and the Conservator reports that it is very difficult to bring the Kols to understand that they must not light fires indiscriminately in reserved forests.

Of the total area of the reserves, covering 4,882 square miles, including those in which special measures were not adopted, the only forests which entirely escaped fire during the year were those in the Sunderbuns and Chittagong Divisions, and in the Hazaribagh sub-division. The Darjeeling and Teesta forests suffered only to a trifling extent. In Kurseong 3,899 acres were burned; in Palamow 12,000 acres, or 10·2 per cent. of the reserves, were burned; in Julpigoree 15,556 acres, or over 13 per cent. of the reserves, were burned; in Buxa 59,780 acres, or nearly 35 per cent., were burned. With the record of these extensive losses before him, it is scarcely necessary for the Lieutenant-Governor to press upon the Conservator the early prosecution of special measures for the protection of all reserves against fire. Omitting the Angul and Singbloom forests from calculation, the measure of success obtained in the reserves in which fire protection has been well established is 94·2 per cent. Mr. Richardson, the Divisional Officer of Buxa, deserves credit for his activity and success in saving his forests from fire in a dangerous season.

The expenditure on fire protection during the year amounted to Rs. 16,122. Having regard to the great importance of this department of forest work, the amount seems to the Lieutenant-Governor to be quite inadequate, and he desires that in the next budget a more liberal allowance be provided. The fire protection rules, which were made in December 1881 for the Darjeeling and Julpigoree Divisions, are now in force in the Hazaribagh, Lohardugga, and Angul forests.

8. *Grazing.*—The revenue realized from grazing and the sale of grass and leaves for fodder was Rs. 6,237 against Rs. 6,692 in 1883-84, and the number of cattle admitted into the forests fell from 28,276 to 24,649. Grazing rules for the Darjeeling and Khoorda forests are now under the Lieutenant Governor's consideration. Should the rules as submitted not provide for the cases referred to in the Conservator's 63rd and 74th paragraphs, a special report in regard to these matters should be submitted to Government. The question of cattle-grazing in forest tracts is not one which can be decided with reference to considerations of forest conservancy alone, and this qualification is specially applicable to the case of Darjeeling.

9. *Natural reproduction, Plantation, and Cultural operations.*—The Conservator's remarks under these headings show that good work was done by the Department during the year. The experiment of opening out the soil in the Buxa Reserve by driving elephants through the forests with light logs attached to them has been a success, and where this has been done, followed by broadcast sowing of sal seed to assist natural reproduction, seedlings have come up plentifully.

The record of plantations stands as follows:—

	AREA IN ACRES.		
	At beginning of the year.	Added during the year.	At close of the year.
Regular plantations ...	1,740	261	2,001
Other cultural operations (i.e. chiefly filling up of blank spaces in the forests in assistance of natural reproduction)	823	111	934
Total ...	2,563	372	2,935

Of the area thus planted, hill trees, principally oak and tun, cover 982 acres; teak, plains tun, sâl and other plains trees cover 1,581 acres; bamboos 312 acres; and the 60 remaining acres include small plantations and nurseries of conifers, mango, jack, divi-divi (*Casalpinia coriaria*), India-rubber tree, rain-tree (*Pithecolobium saman*), paper mulberry (*Broussonetia papyrifera*), &c. The divi-divi seedlings in the Buxa Reserve were devastated during the year by field rats, which destroyed all but 561 plants in a block of 45 acres. The mahogany sowings appear to have been moderately successful in the Chittagong Division, but to have failed elsewhere. The expenditure under the head of Planting and cultural operation in the year was Rs. 10,500.

10. *Communications and Buildings.*—One hundred and five miles of new roads were opened during the year, and 320 miles were repaired, at a total cost of Rs. 12,588. Good progress was made in the Chota Nagpore Division, where there is much need for opening the forests for export.

11. *Working and yield of the Forests.*—The yield of the forests for the year is stated as follows:—

	Timber.	Fuel.	Bamboos.	Minor produce.
	C. ft.	C. ft.	No.	Mds.
Removed—				
From Reserved forests—				
By departmental agency ...	78,147	328,213	581,933	427
By permit-holders ...	5,067,051	11,035,593	4,802,388	51,80,015
On free grants ...	8,020	975
Total of Reserved Forests ...	5,145,194	11,363,806	5,444,321	51,22,317
From Protected and District forests—				
By permit-holders ...	505,057	4,085,812	10,261,005	8,00,553
On free grants
GRAND TOTAL OF ALL FORESTS ...	5,654,491	15,449,618	21,710,126	59,22,870

Removal of timber and other produce of the forests of these Provinces is effected for the most part by private agency, and in the year under review the timber and fuel removed by the agency of the Department (which worked directly chiefly in the Buxa and Darjeeling forests) amounted only to 1·3 and 2 per cent. respectively of the total yield.

There was a falling off in the year under review in the operations of permit-holders under all the heads given in the above table, except under the head of "Bamboos," as compared with the total yield of the forests in the year 1883-84, which was shown as follows:—

Timber.	Fuel.	Bamboos.	Minor produce.
C. ft.	C. ft.	No.	Mds.
6,466,746	19,034,256	20,572,889	49,90,257

It will be seen that there was a decrease of 812,000 cubic feet in the removals of timber and of 2,684,000 cubic feet in the removals of fuel. The decrease in the removals of timber and fuel is especially noticeable for the Sunderbuns and Kurseong Divisions; the decrease in the case of fuel was great also in the Chittagong Division. From the reserved forests of the Sunderbuns Division (which yielded 70 per cent. of the whole outturn of wood brought out of the forests managed by the Department), 542,000 cubic feet of timber less than in the previous year, and 2,020,000 cubic feet of firewood less than in the previous year, were worked out during the year. The decreased working of the forests of this Division is attributed, as in the case of the previous year, to the fact that timber-dealers have

been holding off in their operations on account of changes recently made in the permit system, whereby permits are given for shorter periods, and on account of better supervision which now prevents two or more cargoes of timber or fuel being exported on payment for a single load. Large stocks accumulated in and round Calcutta in previous years have enabled dealers to hold off in the last two years; but since the close of the year under review, an active demand has again set in. In the Kurseong Division the decrease of demand is due to the fact that large clearings have recently been made for tea cultivation, and the demand of dealers has been in great part met from the newly-cleared area, "the managers of the gardens being glad to get rid of the forest produce cut at merely nominal rates." The same cause has been at work in the Julpigoree Division. The decreased working of timber in the Chittagong Division is due to the local market having been overstocked from heavy fellings in the previous year. There was an increased outturn during the year from the Darjeeling and Teesta Divisions.

The important part played by *fukirs* in the working of the Sunderbuns forests deserves a word of passing notice. They accompany parties of wood-cutters in these forests to protect them by their religious observances from tigers. Notwithstanding the presence of these *fukirs*, it is reported that tigers made great havoc among the wood-cutters during the year, killing no less than 116 men. Among those killed were two *fukirs* in charge of *paras* or wood-cutters' stations. "Several *paras* were abandoned because of the number of men carried away from them by tigers, and in one case 17 wood-cutters were carried away from a single *para* on the Bhudder river, before the remainder lost faith in the *fukir* in charge."

12. *Financial results.*—The following table compares the financial results of the working of the Department during the last two years:—

YEAR.		Receipts.	Charges.	Surplus.
		Rs.	Rs.	Rs.
1883-84	...	6,94,334	3,87,813	3,06,521
1884-85	...	5,71,152	4,11,915	1,59,237

The expenditure of the year under review was higher than it has been in any previous year; while the receipts were less than any of the preceding three years. The explanation given of the increase in expenditure would seem to indicate that the increase is not of a permanent character, and that, as far at all events as it has been incurred in the Chota Nagpore Division, it is of the nature of reproductive expenditure.

As in former years, the paying divisions are the Sunderbuns and Chittagong Divisions only. All the other Divisions show deficits on their working, ranging from Rs. 5,300 in the Teesta Division to Rs. 49,000 in Chota Nagpore.

13. *Conclusion.*—Notwithstanding the falling off in the receipts of the year, which are believed to be entirely due to temporary causes, the Lieutenant-Governor observes with satisfaction that the year has been one of substantial progress in forest administration. The policy of the Department has been steadily directed to increasing the permanent resources of the forests of these Provinces, and the annual surpluses have never been obtained, though they might often have been increased, by discounting the future. The only matter of importance which seems to have escaped attention during the year is the question of village fuel preserves. Much has been written regarding it, but nothing practical has yet been attempted. It is pre-eminently a question in which the Conservator should consult with the Director of the Agricultural Department.

The Lieutenant-Governor desires to repeat the commendation expressed on former occasions of Mr. Home's zealous and efficient management of the Department. Mr. Home makes favourable mention of all the controlling staff who were employed under him during the year, with one exception. His remarks will be noted in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

A. P. MacDONNELL,

Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 31st October 1885.

District, and date of return.		Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
3AL. Western Districts.			
1	Burdwan, Oct. 31 '85	Nil	Weather—seasonable. Prospect of <i>amun</i> on the whole good. A slight fall of rain would do good in parts. Health fair, but there is some fever in the Sudder sub-division. Price of rice has risen slightly, except in the Culna sub-division.
	Culna ...	1.30	
	Cutwa ...	0.05	
	Raneegunge ...	0.86	
2	Bankoora, " 31 "	Nil	Weather—bright and getting cool. Prospects of <i>kaimanta</i> paddy continue bright. Sowings of cold-weather crops in progress. Police report shows that rice is selling at from 16 to 28 seers per rupee. Public health generally good.
3	Beerbhoom, " 31 "	Nil	Weather—cool in morning and night. Prospects of <i>amun</i> crop good. <i>Jus</i> paddy being reaped. Rain wanted for <i>amun</i> on high lands and sugarcane. Price of rice falling. General health good excepting a few cases of cholera.
	Rampore Haut ...	0.25	
4	Midnapore, " 31 "	0.89	Weather—seasonable. Prospects of rice in unflooded parts generally very good, and good <i>rubbee</i> crops, where such are grown, are expected. Public health normal.
5	Hooghly, " 31 "	Nil	Weather—cool and fair. Rice crop excellent in all parts of the district not damaged by floods. <i>Rubbee</i> and <i>boro</i> paddy cultivation has commenced. Public health fair.
	Serampore ...	0.56	
	Jehanabad ...	0.25	
	Howrah, Nov. 2 "	0.08	Cold weather has set in. Crops are good where there are any. A small part of <i>amun</i> crop being reaped. <i>Boro</i> paddy being cultivated. Land being ploughed for winter crops. Health fair.
Central Districts.			
6	24-Pergha, Nov. 2 '85	0.44	Weather—seasonable. Prospects of <i>amun</i> , except in low and inundated tracts, are good. Lands are being prepared for winter crops. Public health generally good.
7	Nuddea, Oct. 31 "	Nil	Weather—clear and getting cold. Sowing of winter crops progressing well; prospects of those already sown are very good. Public health good.
	Kushtea ...	0.87	
	Meherpore ...	0.65	
	Chuadanga ...	1.42	
	Runaghat ...	Nil	Weather—days hot, but nights becoming cooler; no rain except in Bagirhat. Prospects of late rice very good everywhere except in the small area damaged by floods. Ploughing and sowing of cold-weather crops continue favourably. Public health fair.
8	Khoolna, " 31 "	Nil	
9	Jessore, " 31 "	Nil	Weather—seasonable. Prospects of <i>amun</i> crop good except in the Bongong sub-division where it was greatly injured by the late inundation. Sowings of <i>rubbee</i> crops have commenced. Price of rice stationary. Common rice Rs. 2-8 per maund. Fever continues.
	Jhenida ...	0.80	
	Magurah ...	Nil	
	Narail ...	2.06	
	Bongong ...	0.45	Weather—clear and getting cooler daily. <i>Amun</i> in the <i>Rark</i> promises well, although it does now require a little more rain. <i>Kalai</i> doing very well; other <i>rubbee</i> crops being sown. Indigo is being sown. Public health fairly good. Common rice 13 to 18 seers per rupee.
10	Moorsheadabad, " 31 "	Nil	
11	Dinapore, Oct. 30 "	0.03	Weather—fair and seasonable. <i>Amun</i> crop good. Rice 17 seers per rupee on the average.
12	Rajshahye, " 31 "	Nil	Weather—seasonable. Recent rain has benefited <i>amun</i> paddy and other crops. Prospects continue fair, though more rain is still wanted in parts. Lands are being prepared for mustard and other cold-weather crops. Price of rice somewhat improving. Fever general.
	Natore ...	0.70	
	Nowgong ...	0.80	Weather—seasonable. Prospects of <i>amun</i> and other standing crops good. <i>Kalai</i> being harvested. Sowing of mustard has commenced. Fever and bowel-complaints still prevalent at head-quarters.
13	Bangpore, " 31 "	Nil	
	Gaibanda ...	3.03	
	Kurigram ...	0.45	
	Nilphamari ...	Nil	Weather—getting cold. A rather severe shock of earthquake on 25th instant. State and prospects of crops continue to be very satisfactory. Public health fair.
14	Bogra, " 31 "	Nil	
15	Pubna, " 31 "	Nil	Cold weather setting in. Prospects of crops continue good. Fever prevalent about Serajgunge.
	Serajgunge ...	0.27	
16	Darjeeling, " 31 "	0.02	Weather—cloudy and raw. Prospects of crops good. Public health good.
17	Jalpigoree, " 31 "	Nil	Weather—fair and seasonable; getting cooler daily. Late rice crop everywhere satisfactory. Jute and <i>kalai</i> flourishing. Cultivation of land for cold-weather crops progressing. Public health good.
Eastern Districts.			
18	Decoa, Oct. 31 '85	Nil	Weather—seasonable. Harvesting of <i>astini</i> paddy going on. Prospects of crops good. Lands being prepared for winter crops. Fever and measles reported from parts of the Munshigunge sub-division.
	Manickgunge ...	2.21	
	Munshigunge ...	1.5	
	Narsingunge ...	1.80	
19	Furteedpore, " 31 "	Nil	Weather—very cool with generally clear skies. Reaping of <i>amun</i> has commenced. Winter crops being sown. Public health fair.
	Madaripore ...	0.82	
20	Backergunge, " 29 "	0.71	Weather—seasonable. Prospects of <i>amun</i> good. Fever prevails in almost all thanas; public health fair.
21	Mymensingh, " 30 "	2.15	Heavy rain on the 32nd and 23rd throughout the district. Weather cool. Prospects of growing crops excellent. Cold-weather crops being sown.
	Jamsherpur ...	2.45	
	Kishoregunge ...	2.18	
	Attia ...	2.74	
	Netrokona ...	0.55	

No.	District, and date of return.	Rainfall at Budder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
WENGAL—consolid.			
<i>Eastern District—contd.</i>			
CHITTAGONG DIVA.	22 Chittagong Nov. 3 '85	Nil	Weather—seasonable. Prospects of crops continue fair, though standing crops damaged by grubs. Prices steady. Public health good.
	23 Noakholy, Fenny Oct. 30 "	0.13 0.15	Weather—fair; mornings and evenings cool. Prospects of <i>aman</i> crop good except in the Fenny sub-division, where some damage was caused by insects. Ploughing and sowing of winter crops in progress. Public health good.
	24 Tipperah Chandpore " 29 "	0.58 2.00	Weather—bright, clear, with cool nights. Paddy, where it has not suffered from inundation, is magnificent. Public health unusually good.
	25 Chittagong Hill Tracts. " 27 "	0.23	Weather—cloudy and sunny with foggy mornings. Harvesting of <i>joom</i> paddy nearly over. Sugarcane and cotton doing well. Lands being prepared for mustard.
	Hill Tipperah, " 28 "	1.45	Weather—getting cold. Prospects of <i>aman</i> paddy good. Cotton being harvested. Pulses being sown. Public health good.
SEHAH.			
PATNA DIVA.	26 Patna, Oct. 31 '85	Nil	Weather—clear; mornings and evenings cool. Cold weather has set in. Paddy on high lands suffering from want of rain. Rain also needed for <i>rubbee</i> sowings. Sporadic cases of fever reported, but on the whole health of the district good.
	27 Gya, " 31 "	Nil	Temperature still high for this time of the year. Rain urgently needed for rice crops and <i>rubbee</i> sowings. Much injury has already been done to rice crops. Health fair. Prices show a slight improvement.
	28 Shahabad, " 31 "	Nil	Weather—hot in day, but cool at night. Prospects of paddy crop promising except in Sasseram and Bhambush where rain is wanted. <i>Rubbee</i> sowings in progress. Cholera and fever still prevalent.
	29 Durbhanga, " 31 "	Nil	Weather—getting cold. Prospects of rice crop continue favourable, but rain urgently required to secure a good outturn. <i>Rubbee</i> sowings going on. Tobacco still being planted. Prices falling. A few cases of cholera reported from Madhubani.
	30 Mozufferpore, " 31 "	Nil	Weather—fine. Sowing of <i>rubbee</i> crops continues. Prospects of <i>aghazi</i> rice very good. Public health moderate.
	31 Saran, " 31 "	Nil	Weather—seasonable. Standing crops are looking well. <i>Rubbee</i> sowings going on; early sowings have germinated well. Sporadic cases of fever still reported, but on the whole general health good.
	32 Champaran " 31 "	Nil	Weather—seasonable. Standing crops looking well. <i>Rubbee</i> sowings commenced. Prices of food-grains have fallen slightly. Some cases of cholera and fever still reported from the interior.
BHAGALPUR DIVA.	33 Monghyr, Oct. 31 '85	Nil	Weather—fine and clear; temperature falling. Prospects of low land paddy continue good. <i>Rubbee</i> sowings progressing. Public health good.
	34 Bhagulpore, " 31 "	Nil	Weather—very fine, clear and cold. Prospects of <i>rubbee</i> crops very good. Rice in low lands very good, but in high lands not so good. Cholera bad in north. Prices steady.
	35 Purneah " 31 "	Nil	Weather—seasonable. Rice crop doing well. Sowing of peas and gram continues. New early rice selling at 20 seers per rupee. Public health continues good all over the district except in parts of the Arrareah sub-division, which have been affected by cholera and fever.
	36 Maldah " 31 "	Nil	Weather—cool, dry, and fine. Prospects of winter rice good, but a little rain wanted. Other standing crops, viz. <i>kalai</i> , mustard, &c., doing well. Coarse rice 15 to 20 seers per rupee. Public health good.
	37 Sonthal Perghe, Rajmehal, Pakour " 31 "	Nil 0.07 0.20	Weather—fine, clear, cold, and seasonable. Prospects of rice harvest splendid everywhere. <i>Rubbee</i> prospects also very good.
ORISSA.			
UNAMA DIVA.	38 Cuttack Oct. 30 '85	1.0	Weather—clear and a little cold at night. Early <i>sarad</i> rice flowering. Late <i>sarad</i> in ear. Plants touched by the sea-waves are likely to be destroyed. Kind of crawling insects have appeared in some parts of the Jajpur and Kendrapara sub-divisions, and are destroying <i>sarad</i> and <i>rubbee</i> crops. Price of rice unchanged. Public health generally good, except a few cases of cholera in the Jajpur sub-division.
	39 Pooree, Khorda " 29 "	0.47 1.24	Weather—seasonable. Prospects of <i>sarad</i> crops are fair except in the tract bordering the Chilka, where relief works are going on owing to loss of rice from drought. Late <i>sarad</i> is in ear. <i>Laghu sarad</i> is being harvested. Late rice being ploughed for the <i>rubbee</i> crops. Common rice selling at an average of 17 seers 12 chittacks per rupee in the Sudder sub-division, and 15 seers 12 chittacks in the Khorda sub-division. Cholera reported from a few places.
	40 Balasore, " 30 "	1.22	Weather—seasonable. More or less rain all over the district, which is beneficial to the progress of the crops. Sowing of <i>sarad</i> crops exceptionally good. A few cases of cholera reported from Dhamanagar Chakia. Public health generally good.

No.	District, and date of return.	Rainfall at Sodder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
CHOTA NAAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hasaribaga, Oct. 30 '85	0.37	Weather—bright and clear. Prospects continue good. Late rain has greatly benefited rice and other crops. Cases of cholera continue to be reported, otherwise general health good.
42	Lohardugga, „ 31 „	Nil	Weather—seasonable. Prospects of winter rice continue favourable. <i>Rabbes</i> being sown, but in some places rain is wanted for ploughing. Prices steady. Cholera reported from thana Lohardugga, and fever from the Palamow sub-division.
43	Singbhoom, „ 30 „	1.22	Weather—clear, bright, and cool. Prospects of crops continue good. Price of rice lower. Sporadic cases of cholera in thana Chukerdharpur, and one fatal case in Chyebasan. Cattle-disease reported from thana Seraikele.
44	Manbhoom, „ 31 „ Govindpore „	Nil 0.46	Weather—fine and cool. Prospects of cold-weather crops continue excellent. Public health good.

Published for general information.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

Calcutta, the 2nd November 1885.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS
TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 30TH OF
OCTOBER 1885.**

At the close of the previous week the weather over the whole of South Bengal and Orissa was in a slightly disturbed condition. This was owing to the advance over the west coast of the Bay of a diffused depression, which gave very heavy rain along certain parts of the west coast, and the disturbance spreading out in a northerly direction gave clouded skies, increased humidity and temperature and light rain over the whole of South Bengal and Orissa. On the Friday these conditions were slowly and gradually disappearing, but they continued to exist in a feeble form for the first two or three days of the present week. During this period, however, the southerly winds which were still blowing over a large part of the province were being gradually driven back by a dry westerly and north-westerly wind current, and in their gradual retreat the southerly winds gave rise to a few local, but in some cases rather heavy, showers, particularly at the stations near the coast line. By the 27th and 28th these dry winds had become fairly well established, and they continued to blow, becoming more northerly as the week advanced, up till the 30th. On the 29th and 30th heavy rain commenced to fall at the southern stations on the west coast, and this appeared to be the setting in of the Madras rains, for all the stations from Masulipatam down to Galle received amounts of rain varying from about three up to five inches on these two days. The indraught towards the coast accompanying this rainfall increased the steadiness and to a certain extent the strength of the northerly current in Bengal, and at the end of the week the conditions were clearly those of the north-east monsoon or cold weather; the sky had cleared rapidly, and had become almost cloudless, humidity had decreased with great rapidity, and temperature had fallen by many degrees. So rapid was the fall of the night temperatures that at two or three stations the differences between two consecutive nights was nearly 10° , and the average nightly reduction of temperature at the majority of stations during the last three or four days of the week was about 2° or 3° .

On the first day of the week rainfall was general in Orissa and East Bengal, and for the first two or three days showers continued to occur in the same districts, and also in South and North Bengal. Temperature, humidity, and cloud proportion were also high during this period over a large portion of the province, and thus the first half of the week was a complete contrast in every respect to that of the second half of the week.

The changes of pressure have been small and variable throughout the week, and the variations from the normal, though rather irregular at neighbouring stations, are unimportant. Thus at Cuttack there is a slight, but distinct, excess pressure amounting to $0.02''$, while at Saugor Island and Calcutta pressure is distinctly below the normal. Generally speaking, pressure has been slightly below the normal, or normal over the whole of Behar, and West and South-West Bengal, while there has been a distinct excess pressure at the eastern stations and in Orissa. The average variation from normal pressure over the whole province has been an excess of only $0.002''$, so that it has been almost absolutely normal.

As stated above, the temperature for the first half of the week was decidedly high, while in the second half it experienced a very rapid fall. For the whole week the average temperature of the province has been above the normal by rather less than 1° , but the excess temperature has been mainly confined to Chutia Nagpur, South Behar, Orissa and East Bengal. In South-West Bengal temperature has been practically normal, and in North Behar it has been distinctly below it. The decrease of temperature which has taken place in the week has been principally in the night temperatures, and thus the mean minimum temperature for the whole week for the districts of North and South Behar is nearly 8° lower than during the previous week; in South-West and North Bengal the fall has averaged about 6° , while in Orissa and Chutia Nagpur the fall has averaged nearly 4° during the week.

The rainfall for the week has been practically confined to Orissa and East Bengal. South-West Bengal and North Bengal, except for a few local showers, have been rainless, and North and South Behar and Chutia Nagpur report absolutely no rain. In Orissa, which has received the largest amount, and where the rain has been fairly general, the average fall is only 0.63 inch. The normal fall for the week is 1.61 inches, so that the actual amount received is little more than a third of the normal. In East Bengal the average fall has been only equal to 0.22 inch, but the fall has not been evenly distributed, and the largest and most general rain has been received in the Chittagong and Tipperah districts, while other districts have been almost rainless. In South-West Bengal, as above stated, only local falls occurred, and these were principally in the Midnapore and 24-Pargunnahs districts.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 30th of October 1885 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.		
			if highest of each day.	if lowest of each day.	if mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The total fall from 1st January to 31st October 1885 ... 65.77

The average fall of the corresponding period for 24 years, S. G.'s Office ... 64.47.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the New Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

= fog,  dew, p passing temporary showers.

MEMORANDA.

THE birth and death returns of the principal Municipalities in Bengal, for the week ending 10th October 1885, present the following results:—

1. That births and deaths were registered in these Municipalities in the proportions per 1,000 of population of 27.9 and 37.4, respectively, as opposed to 27.1 and 40 per 1,000, respectively, in the preceding week ending 3rd October, indicating a falling off in the registration of deaths.

2. That these events were returned in the highest proportions from the following Municipalities:—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Naraingunge	62.1	Gya	77.2
Utterpara	47.2	Bhagulpore	64.2
Gya	44.4	Patna	63.2
Patna	39.9	Utterpara	47.2
Serampore	37.3	Monghyr	43.4
Chittagong	35.2	Jessore	42.8
Burdwan	33.6	Suburbs of Calcutta	39.7
Bhagulpore	33.5	Durbhanga	37.7
Durbhanga	31.5	Hughli	37.6
Chupra	31.2	Chupra	37.1
			Purneah	31.6
			Puri	33.6
			Naraingunge	33.1
			Mozufferpore	31.6

3. That, as compared with the results of the preceding week, the mortality from cholera had diminished sensibly, and the casualties from the rest of the death-causes excepting injury, exhibited no marked differences, *vide* figures in the subjoined table:—

			Ratio per mille during the weeks ending—	
			10th October 1885.	3rd October 1885.
Cholera	2.0	3.5
Small-pox	1	0.3
Fever	17.5	18.2
Bowel-complaints	6.7	7.0
Injury	5	5
Other causes	10.5	10.7

4. That the highest death-rates from cholera, fever and the maladies classed under the head of "other causes" were returned from the following Municipalities, the rest of the diseases not proving noticeably fatal anywhere:—

Cholera.		Fever.		Other Causes	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Gya ...	10.9	Jessore ...	42.8	Utterpara ...	37.8
Mozufferpore ...	7.3	Gya ...	38.2	Puri ...	18.9
Monghyr ...	4.5	Bhagulpore ...	29.8	Gya ...	17.7
		Patna ...	28.2	Midnapore ...	15.5
		Purneah ...	27.7	Dacca ...	14.9
		Hughli ...	24.2	Suburbs of Calcutta ...	13.4
		Monghyr ...	23.5	Patna ...	13.3
		Benuleah ...	21.0	Chupra ...	12.7
				Serampore ...	11.8
				Durbhanga ...	11.0

5. That, the mortality of the week, distributed under the heads of *Sex*, *Class* and *Age*, stands as indicated below:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males ...	37.8	Christians ...	8.7	Under 1 year	334.4
Females ...	36.8	Hindus ...	39.7	1 and under 5 years	62.6
Ratio of male deaths to every 100 female deaths ...	116	Mahomedans ...	33.0	5 " " 10 "	23.0
		Other classes ...	36.4	10 " " 15 "	17.6
				15 " " 20 "	23.5
				20 " " 30 "	19.0
				30 " " 40 "	21.6
				40 " " 50 "	29.5
				50 " " 60 "	41.0
				60 years and upwards	78.2

R. LIDDERDALE, M.D., Deputy Surgeon-General,

The 2nd November 1885.

Sanitary Commissioner for Bengal.

MORTALITY ACCORDING TO—

POPULATION.			BIRTHS.			DISEASE.												Sex.		Ratio of male deaths to every 100 female deaths.			
			NUMBER OF —		RATIO PER 1,000 OF POPULATION PER ANNUM.		Ratio of male births to every 100 female births.		DEATHS FROM —								RATIO PER 1,000 OF POPULATION PER ANNUM.		DEATHS.		RATIO PER 1,000 OF POPULATION PER ANNUM.		

MEMORANDA.

THE table appended to this memoranda furnishes the following particulars in connection with the registration of births and deaths in the principal Municipalities in Bengal during the week ending 17th October 1885.

1. That the mean birth and death-rates stood at 23·4 and 33·8 per 1,000 of population, respectively, in opposition to 27·9 and 37·4 per 1,000, respectively, during the preceding week ending 10th October, indicating a noticeable diminution in the registration of both events.

2. That the following Municipalities furnished the highest proportions of births and deaths :—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Comillah	50·1	Purneah	62·3
Purneah	48·5	Gya	60·8
Durbhanga	37·8	Jessore	55·1
Chittagong	37·6	Patna	54·1
Gya	34·9	Puri	52·8
Mozufferpore	32·8	Bhagulpore	48·9
				Beauleah	42·0
				Suburbs of Calcutta	39·3
				Mozufferpore	32·8
				Monghyr	32·5

3. That the mortality from the principal diseases exhibited below, contrasted with the death-rates from the same causes in the preceding week, stands as follows :—

				Ratio per mille during the weeks ending—	
				17th October 1885.	10th October 1885.
Cholera	1·3	2·0
Small-pox	·03	·1
Fever	17·0	17·5
Bowel-complaints	6·0	6·7
Injury	·5	·5
Other causes	8·8	10·5

The above figures indicate that there was a diminution of mortality from every death-cause, excepting injury, notably from the maladies recorded under the head of "Other causes."

4. That of the above-named diseases, while cholera proved noticeably fatal only in the Gya town, viz., at the rate of 6·1 per 1,000 of population, and the casualties from small-pox and injury were nowhere conspicuously large, fever, bowel-complaints, and "other causes" proved most fatal to life in the following Municipalities :—

Fever.			Bowel-complaints.			Other causes.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Purneah	...	52·0	Patna	...	12·0	Puri	...	29·4
Beauleah	...	39·4	Suburbs of Calcutta	...	11·0	Gya	...	14·3
Gya	...	34·9				Durbhanga	...	12·6
Jessore	...	10·6				Patna	...	12·0
Bhagulpore	...	29·0				Suburbs of Calcutta	...	11·8
Patna	...	28·2				Bhagulpore	...	10·9
Ranaghat	...	24·0				Chupra	...	10·7
Mozufferpore	...	23·1						
Monghyr	...	21·7						
Puri	...	21·0						

5. That the death-rates in relation to Sex, Class and Age, stands as follows :—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	35·8	Christians	...	39·1	Under 1 year	...	280·7
Females	...	31·5	Hindus	...	35·6	1 and under 5 years	...	55·5
Ratio of male deaths to every 100 female deaths	...	129	Mahomedans	...	29·5	5 " 10 "	...	24·6
			Other classes	...	72·8	10 " 15 "	...	16·3
						15 " 20 "	...	25·1
						20 " 30 "	...	16·9
						30 " 40 "	...	21·9
						40 " 50 "	...	19·5
						50 " 60 "	...	30·1
						60 years and upwards	...	93·7

INCREASE.

Tons.

Edible grain	1,512
This increase is due to the high rate consequent on the floods on account of the breakage of Laltiakuri embankment.					
Piece-goods	42
This increase is due to Eastern Bengal State Railway being flooded and the goods for Rampore Beaulah carried by this li					
Sundries	65
This increase probably is due to high rates consequent on the floods.					
Revenue stores	67
This is due to more stores carried during this month.					
DECREASE.					
Coal	349
This decrease is due to previous stock not exhausted.					

NALHATI, the 26th October 1885.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE REGISTRATION DEPARTMENT IN BENGAL FOR THE YEAR 1884-85.

REGISTRATION.

Darjeeling, the 30th October 1885.

RESOLUTION.

READ—

The Report on the Administration of the Registration Department for the year 1884-85.

Read also—

The Reports for the years 1882-83 and 1883-84, and the orders of Government recorded thereon.

Read also—

The Report on the operations under the Mahomedan Marriage Registration Act during the year 1884-85.

During the past year there was again an increase in the number of registrations, amounting to 87,378, or 14·53 per cent. as compared with an increase of 45,861, or 8·26 per cent. in the previous year. The increase in the number of compulsory registrations affecting immoveable property exceeded considerably the increase in the number of optional registrations affecting property of the same kind; the percentage of the latter was, however, much higher than that of the former, the increase in compulsory registrations amounting to 43,024, or 12·97 per cent., while the increase in optional re-

Rs. 9,74,711 to Rs. 1,074,501, an increase of 10·23 per cent., while the expenditure increased from Rs. 5,04,755 to Rs. 5,54,110, or 9·77 per cent.; the net surplus being Rs. 5,20,391, or 10·73 per cent. higher than the net surplus for 1883-84.

2. The following table shows the number of operations and the receipts and expenditure during each of the years since 1869-70. It also shows the number of registration offices open during each year. In former reports the figures given for the years preceding 1874-75 included the figures for Assam, as the Chief Commissionership formed, during those years, a part of Bengal. In his present Report, however, the Inspector-General has excluded the figures for Assam, so that the table now relates purely to Lower Bengal:—

YEARS.	NUMBER OF REGISTRATIONS--				Total receipts.	Total expenditure.	Surplus.	Number of registration offices.
	Affecting immoveable property		Other registrations.	Total.				
	Compulsory.	Optional.						
1869-70	158,226	50,356	37,997	246,581	Rs. 4,02,392	Rs. 3,07,545	Rs. 94,847	150

Decrease

8. In the statement given below are shown the number of compulsory and optional registrations referring to immoveable property, and also the number of registrations other than those affecting such property—

REGISTRATIONS AFFECTING IMMOVEABLE PROPERTY.

(A).—Compulsory.

	1883-84.	1884-85.
Instruments of sale, &c., of immoveable property of value of Rs. 100 and upwards	42,951	47,027
Instruments of mortgage of immoveable property of value of Rs. 100 and upwards	48,295	55,253
Perpetual leases	75,552	86,519
Term leases under section 17	154,571	175,045
Other compulsory registrations	10,337	11,886
Total compulsory registrations affecting immoveable property	331,706	374,730

(B).—Optional.

Instruments of sale, &c., of immoveable property of value less than Rs. 100	100,618	115,540
Instruments of mortgage of immoveable property of value less than Rs. 100	52,207	66,416
Leases for one year and less	4,952	5,368
Miscellaneous documents	6,187	6,492
Total optional registrations affecting immoveable property	1,63,964	193,811
Total registrations affecting immoveable property	495,670	568,541

REGISTRATIONS OTHER THAN THOSE AFFECTING IMMOVEABLE PROPERTY.

(C).

Obligations for payment of money	73,985	85,459
All other registrations	30,548	32,566
Total of above	104,533	118,025

(D).

Number of wills registered	1,744	1,783
Ditto of written authorities	45	41

4. Under every head in the statement there has been an increase in the number of operations, with the exception of the number of written authorities registered, and under this head, which is a very small one, there was a slight decrease. The largest number of operations under any of the heads was under the head of term leases, of which 175,045 were registered as against 154,571 registered during 1883-84. The number of perpetual leases registered rose from 75,552 in 1883-84 to 85,519 during the past year. The number of instruments of sale, &c., of immoveable property of Rs. 100 and upwards in value was 47,027, showing an increase of 9.49 per cent. on the number registered during the preceding year, while the number of similar instruments relating to property below Rs. 100 in value registered was 55,253 as compared with 48,295 registered in 1883-84, showing an increase of 6,958 registrations, or 14.40 per cent. Under the optional registrations affecting immoveable property, the number of instruments of sale, &c., relating to property worth Rs. 100 and upwards rose from 100,618 in 1883-84 to 115,540 during the past year, while the same class of documents relating to immoveable property of less than Rs. 100 in value increased from 52,207 to 66,416, an increase of 27.21 per cent. The number of obligations for the payment of money, or money-bonds registered, shows an increase of 17.09 per cent. as compared with the number registered during the preceding year, the number having risen from 72,985 to 85,459. Including Calcutta and Howrah as registration districts, an increase of the number of registrations as compared with the figures for 1883-84 took place in 40 districts, while there was a decrease in five only. The largest decrease was in the Sonthal Pergunnahs, where the number of registrations fell from 6,884 in 1883-84 to 4,283 during the past year. In Bhagulpore also the number fell from 13,508 to 11,967. The number of districts in which over 20,000 registrations took place was 11, as compared with 9 in 1883-84 and 8 in the year which preceded it. Jessore, as usual, headed the list with 69,345 registrations as against 61,442 in the preceding year. The other districts were Backergunge (47,948), 24-Pergunnahs (46,439), Chittagong (40,253), Noakholly (31,787), Midnapore (31,333), Tipperah (29,198), Furreedpore (26,959), Khulna (24,602), Burdwan (21,542) and Dacca (21,124). In 6 districts over 30,000 documents were registered, as compared with 4 districts in 1883-84 and 3 districts in 1882-83. In 20 districts less than 10,000 documents were registered. Darjeeling and Singbhoon, in each of which there was a falling off as compared with 1883-84, are again much below any other district, the number of registrations in them being only 445 and 239 respectively.

5. The total number of leases, perpetual, term, and for periods of one year and under, which were registered during the last four years, were—

		1881-82.	1882-83.	1883-84.	1884-85.
Perpetual leases	...	74,639	70,764	75,552	85,519
Term leases	...	140,287	141,156	154,571	175,045
Leases for one year and under...		3,890	4,534	4,952	5,363
Total	...	218,816	216,454	235,075	265,927

Out of 85,519 perpetual leases registered, 82,787 were registered in Bengal Proper, only 1,402 being registered in Behar, 1,245 in Chota Nagpore and 85 in Orissa, and of the large number registered in Bengal Proper, 69,543 were registered in seven districts—Chittagong, Backergunge, Jessore, Noakholly, Furreedpore, 24-Pergunnahs and Khulna; the numbers registered in Chittagong, Backergunge and Jessore being 22,010, 12,069 and 11,315 respectively. The increase of perpetual leases in Eastern Bengal is attributed to the "growing prosperity of the ryot, especially those who lease lands which require much labour or expenditure of money to reclaim," as the latter are unwilling to incur expense in improvements until they have secured "some certainty of tenure." On the other hand, these leases are frequently given by zemindars who are in pecuniary difficulties, because they are enabled by giving them to raise a considerable sum of ready money. These leases are also a convenience to landholders whose property is scattered, and who, by giving a perpetual lease, can relieve themselves of the trouble and expense of looking after outlying portions of their property.

175,045 being registered in Bengal. Behar is not, however, so far behind in respect of term leases, as it is in the case of perpetual leases, 40,360 leases of the former kind having been registered in it during the past year. In four districts more than 10,000 term leases were registered, viz. Jessore (16,126), Furreedpore (11,968), Backergunge (10,641) and Tipperah (10,020.) The 24-Pergunnahs and Mymensingh come next with 9,767 and 9,106 term leases respectively. In Chittagong, in which district 22,010 perpetual leases were registered, the number of term leases registered only amounted to 1,212. Various reasons are given for the increase in Eastern Bengal, where it is most noticeable: in Furreedpore the increase is said to be due to the settlement of three large estates, and in Khulna to a large reclamation of marsh land; while the increase in Mymensingh marks, it is said, "the amicable close of a long-standing quarrel between the landlords and their tenants." The total number of leases for one year and less, registered during the past year, was 5,363 as compared with 4,952 in 1883-84. Of these, 4,529 were registered in Bengal Proper, 571 in Behar, 186 in Chota Nagpore and 77 in Orissa. The total value of leases of all kinds registered during the year was Rs. 1,00,86,412, the value of those registered in Bengal being Rs. 48,04,023, or an average of Rs 43 per lease; while in Behar the value was Rs 48,39,082, or an average of Rs. 134 per lease. Even in Orissa and Chota Nagpore the average per lease is much higher than in Bengal, being Rs. 87 and Rs. 53 respectively.

7. The returns show a decrease in the proportion of leases to counterparts registered, as compared with the preceding year, the percentage of leases being only 26·83 as compared with 28·16 in 1883-84. The best results were again obtained in Chota Nagpore (59·31 per cent.) and Behar (48·08 per cent.) and the worst in Orissa (23·02 per cent.) and Bengal Proper (19·12 per cent.) In the case of leases, the registration of which is compulsory, the proportion amounted to 27·32 per cent., while in the case of those, the registration of which is optional, it only amounted to 11·2 per cent. The highest percentage was in Chumparun, where the leases registered amounted to 91·16 per cent.; while in Lohardugga and Mozufferpore the percentages were 83·05 and 82·81 respectively. In Purneah and Mymensingh the percentages were only 8·23 and 4·7.

8. There was a marked increase in the number of instruments of sale of immoveable property of the value of Rs. 100 and upwards, 47,027 being registered as compared with 42,951 registered during 1883-84, an increase of 9·49 per cent. In nine districts there was a decrease in the number, but it was slight; in one district the numbers in the two years were the same; in all the remaining districts there was an increase. Instruments of mortgage of immoveable property of the value of Rs. 100 and upwards showed an increase of 14·40 per cent., the number having risen from 48,295 in 1883-84 to 55,253 in 1884-85. The increase was general throughout the country, with the exception of two districts, the Sonthal Pergunnahs and Balasore, in which the decrease was 203 and 20 respectively. The number of instruments of gift of property of the same value was 4,272, which represented property of the value of Rs. 21,40,502. These deeds, as in 1883-84, were most numerous in Mymensingh, where 448 were registered; in Dacca and Beerbhoom the numbers were 323 and 239, while the 24-Pergunnahs and Midnapore had 238 each. The largest amount of property transferred was in Sarun, where land to the value of Rs. 2,95,619 was transferred by only 78 deeds.

9. The number of instruments of sale of immoveable property of less than Rs. 100 in value, which was registered, rose from 89,269 in 1882-83 and 100,618 in 1883-84 to 115,540 during the past year. The Inspector-General remarks: "The increased execution of deeds of this class is not a matter for unqualified congratulation, since it shows that a large number of petty holdings and small parcels of land are changing hands, presumably owing to the necessities of their proprietors; but, granted the necessity for carrying out these sales, their presentation at a registration office is undoubtedly to be desired." Looking to the fact that the number of such registrations rose in every district of Bengal, with the exception of Darjeeling, the Sonthal Pergunnahs, Balasore and Singbhoom, the Lieutenant-Governor is disposed to

of the benefits of registration which is now evinced by persons throughout the country. The mere fact that optional registrations of instruments affecting immoveable property increased from 132,475 in 1881-82 and 146,521 in 1882-83 to 163,964 in 1883-84 and 193,811 in 1884-85, shows that the feeling that there is a certain amount of security to be obtained by registration is spreading among the mass of the population of these Provinces. Instruments of mortgage of immoveable property of less value than Rs. 100 increased from 52,207 registered during 1883-84 to 66,416 registered during 1884-85. This increase, not in itself large, was pretty generally distributed throughout Bengal, though Chittagong and Durbhunga each show an advance of nearly 100 per cent. on the figures of the previous year, and the Southal Pergunnahs an almost equal decrease. In Durbhunga one of the causes of the increase is said to have been the loans which a number of the poorer *puadils* of Tirkoot raised by mortgaging their properties in order to procure the money necessary to enable them to attend *sabha* held by the Maharajah of Durbhunga at Benares, the *puadils* being desirous of being present both from the wish to obtain the rewards and dresses of honour which were promised, and from the fear that their absence would prejudicially affect their reputation.

10. The following statement shows the number of estates and tenures transferred by registered deeds during the past two years, the amount for which they were disposed of and the classes of persons by whom they were purchased:—

	Entire revenue-paying estates.		Share in entire revenue-paying estates.		Revenue-free properties.		Intermediate tenures.		Others.	
	1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.
Number of transactions ...	1,570	1,344	11,129	11,701	25,065	27,539	24,953	20,415	7,861	9,000
Purchases by—										
1. Mahajans, lenders, or money lenders ...	261	238	1,431	1,317	4,907	4,976	2,088	2,543	1,378	1,370
2. Zemindars ...	628	367	6,640	7,396	2,646	2,127	2,004	1,940	927	854
3. Intermediate tenure-holders ...	221	2	2,736	2,675	2,158	8,209	14,153	15,801	1,146	1,878
4. Ryots ...	104	1	1,100	1,575	8,431	70,120	6,610	9,227	1,016	2,602
5. Others ...	785	566	1,350	1,821	7,064	8,875	6,649	5,098	3,264	3,941
Per centum ...	34.98,486	39.10,314	95.20,089	1,01,14,18	11,60,888	34,28,849	40,25,025	57,77,640	74,07,307	91,57,125

From this statement it appears that zemindars were again the principal purchasers in the case of entire revenue-paying estates and shares in such estates; ryots and "others" in the case of revenue-free properties; and principally tenure-holders, but also to a large extent ryots, in the case of intermediate tenures. The results are satisfactory from the point of view that the agricultural classes cling to the soil, and that the intervention of money lenders in such purchases is not so general as is commonly supposed. With regard to purchasers coming under the heading "others," the Inspector-General remarks in the case of entire revenue-paying estates: "The question naturally arises who are these 'others'? They are clearly not zemindars or tenure holders, mahajans or cultivators, since these are specified in the statement. They are most probably members of the rising class of native advocates, pleaders, judges, magistrates, doctors, &c., who, it is believed, have a great predilection for this class of property as a medium of safe investment for their savings." It would seem that the members of the same classes also look upon revenue-free tenures as a safe means of investment; for in the case of the sale of such tenures, "others" is next to "ryots" in number as a class, and far exceeds the number under any other class. When the question was raised by Mr Paul, who was then officiating as Inspector-General, regarding the necessity for a detailed classification of purchasers, to which he objected on account of the difficulty of making an accurate one, the Lieutenant-Governor decided that no alteration should then be made in the form of the statements, and the Inspector-General was so informed. Mr. Bourdillon remarks that no further communication has been received by him on the subject. The question involves some difficulties, and, pending the disposal of the rules to be framed under the Tenancy Act, has not been finally settled. The determination arrived at will be communicated in due course to the Inspector-General. There can be no doubt that, as a matter of revenue administration, the fullest information on the subject would be of value.

11. In the following statement are shown the details regarding the purchasers of ryoti holdings at fixed rates, and ryoti holdings with right of occupancy during the last two years:—

	Ryoti holdings at fixed rates.		Ryoti holdings with right of occupancy.	
	1883-84.	1884-85.	1883-84.	1884-85.
Number of transactions ..	20,548	24,327	47,080	54,186
Purchasers—				
1. Mahajans, traders, or money-lenders ..	3,585	4,185	6,745	6,846
2. Zemindars of the holding transferred ..	771	781	1,174	1,080
3. Ditto of holding other than that transferred ..	1,060	2,134	2,298	2,065
4. Ryots ..	10,890	13,112	31,911	39,436
5. Others ..	5,071	5,981	6,504	7,515
Total purchasers ..	22,277	26,014	48,608	57,542

The ryots have again been by far the most numerous purchasers, no less than 13,012 out of a total of 26,014 buyers of holdings of the former denomination, and 39,436 out of a total of 57,542 buyers of holdings of the latter kind belonging to that class. The return also indicates the rapid growth of such transfers, regarding which considerable discussion passed in the debates upon the Bengal Tenancy Bill. The total purchase-money in the case of ryoti holdings at a fixed rate was Rs. 22,83,331, as compared with Rs. 18,78,375 in 1883-84; while the average area per holding rose from 2·2 to 2·9 acres. The annual rental of the holdings was Rs. 2,02,481, as compared with Rs. 1,97,944, the annual rental of similar holdings transferred in 1883-84. In the case of ryoti holdings with right of occupancy, the annual rental of the holdings transferred during the past year was Rs. 3,53,727, as compared with a rental of Rs. 3,26,195 of those transferred in the preceding year: the total purchase-money rose from Rs. 32,00,558 to Rs. 35,30,008. The average area per holding remained the same as in the previous year, viz. 2·2 acres, which was less than the average area in 1882-83, when it amounted to 2·6 acres. The number of years purchase fetched by holdings of the former class ranged between 47·6 in the Sonthal Pergunnahs and 4·2 in Jessore. The number of years purchase of holdings of the latter class varied from 93·8, the highest in Lohardugga, to 3·6, the lowest in Nuddea.

12. During the past year the total number of registrations, other than those affecting immoveable property, and excluding wills and written authorities, was 118,015 as compared with 103,543 in 1883-84. Of these, 85,459, as compared with 72,985 in the preceding year, were bonds for the payment of money. With the exception of eight districts, of which six are in Behar, there has been an increase in the number of bonds registered in every district. As remarked in the Resolution on the Report for 1883-84, there was in that year, for the first time since 1879-80, a rise instead of a fall in the number of bonds registered. The increase during the past year was much more marked, for while the increase in 1883-84, as compared with 1882-83, was only 3,640, the returns for the past year show an increase of 12,474 as compared with 1883-84. Of this very large increase, 5,111 were due to Jessore, the number of bonds registered in that district being 30,658. In 1883-84 and 1882-83 the numbers registered in this district were only 25,547 and 25,927 respectively, but the returns for the past year are not so great as those for 1881-82, when the number of bonds registered was 34,829, or for 1880-81, when 39,245 bonds were registered in that district; but even this number was exceeded in 1879-80, when 49,878 deeds of this description passed through the registration offices in the Jessore district. Various reasons for the recent increased registration of bonds in Jessore are given. The Registrar of Jessore, whose remarks on the subject the Inspector-General quotes, says—

The increase is attributed by the Sub-Registrars of Gadkhali, Jhenida, Magura, and Narail to the high price of food-grains. The Sub-Registrar of Gadkhali further reports that the completion of the railway works, which used to provide employment for the poor class of people, has compelled many of this class to borrow money. Registrations in book IV have increased twofold in the offices of the Sub-Registrars of Jhenida and Gadkhali. The cause of increase in the former is partly attributable to the introduction of

the rural sub-registry system, and the consequent appointment of an officer who could give all his time to the work. At Gadkhali the increase is said to be due to the facility which this station offers for registration, being as it is at a railway station.

As was the case in 1883-84, by far the largest number of the bonds were for small amounts, there being only 2,097 for sums exceeding Rs. 500, and only 17,747 for sums exceeding Rs. 100. It is quite possible that, taking the above facts into consideration, the high price of food-grains may to a great extent be looked upon as the cause of the increase in the number of bonds registered; still it is very remarkable that the extraordinarily large number should be confined to a single district. In Behar, Chota Nagpore, and Orissa, the largest number of bonds registered were those of the fourth class, viz. bonds for amounts varying from Rs. 101 to Rs. 500. In Bengal Proper, in which 74,149 bonds out of the total 85,458 were registered, 19,294 were for sums not exceeding Rs. 25; 25,077 for sums between Rs. 26 and Rs. 50, and 17,774 for sums between Rs. 51 and Rs. 100. The Inspector-General considers that the explanation of this difference is "the same as that offered in the case of leases, viz. that, except in Bengal Proper, bonds of small value are not usually registered, while the advantages of registration are nevertheless so well appreciated that those of large value are very largely brought to the registrars' offices." There was an increase of 39 in the number of wills registered, 1,783 being registered in 1884-85 as compared with 1,744 in the preceding year; while written authorities decreased from 45 to 41. The number of powers-of-attorney registered was 6,722 as compared with 6,602 registered in 1883-84.

13. The Inspector-General draws attention to the fact that, though leases and counterparts can, when presented at the same time, be registered for a single fee, advantage is seldom taken of the concession. In Jessore, out of 27,586 leases and counterparts registered, in only 776 cases were the leases and counterparts presented at the same time. In Tipperah the proportion was higher, both documents being presented at the same time in 1,999 instances out of 12,664 leases registered. In Gya, he remarks, there was not a single instance in which the two were presented at the same time, notwithstanding the fact that in Gya the proportion of leases registered to counterparts amounted to 66.98 per cent. The returns seem to indicate an absence of knowledge of the provisions of the law in some districts, and an imperfect understanding of them in others. The attention of registering officers should, as proposed, be drawn to the subject.

14. As there was apparently a want of uniformity in interpreting the sections of the Act relating to the time from the date of execution within which documents must be presented, and the further time within which execution must be admitted, a circular was issued on the subject in January last by Mr. Bolton, who was at that time officiating as Inspector-General of Registration. Mr. Bourdillon remarks that the circular "gives expression to what may be called the more severe view of the law, and will, no doubt, result in an increase of fines" levied on documents submitted after the expiration of the ordinary time allowed. The circular was issued after the approval of the Advocate-General had been accorded to Mr. Bolton's proposals, and it seems to remove all possibility of any misinterpretation of the law. The next annual report will show whether Mr. Bourdillon's anticipation regarding the increase in the number of fines will prove to be correct.

15. The number of commissions issued and visits paid during 1884-85 was 6,163 as compared with 5,958 in 1883-84. In 3,391 cases, as against 3,086 in 1884-85, registration was refused, but was subsequently ordered in 158 cases out of 317 appeals made against the order of refusal. The number of prosecutions under sections 81 and 82 of the Registration Act was 54 as compared with 57 in the preceding year. Of these, six took place in Midnapore and nine in Moorsherpore. Of the latter, convictions followed in seven cases; and two cases were still pending at the close of the year. In Mymensingh, in which district in 1883-84, there were 13 prosecutions, there was not a single prosecution during the past year. Of 84 persons concerned in the 54 cases in which prosecutions were instituted, and in four cases pending from the preceding year, 54 were convicted, 26 acquitted, and four were awaiting trial at the close of the year. Of the 54 cases, 32 were for false personation,

13 for making a false statement, 8 for forgery, and one for disobedience of summons.

16. The total number of applications for searches or copies was 56,976, as compared with 52,218 in 1883-84. The searches are of three kinds—(1) those in Books III and IV and their indexes, made by the registering officer himself; (2) searches made under the rules of the High Court; and (3) searches made by applicants for their own information. The Inspector-General still expresses disapprobation of the results obtained in connection with the searches made under the rules of the High Court, and proposes to address Government separately on the subject. The Lieutenant-Governor's views on the matter have been expressed in the Resolutions on the Reports for 1882-83 and 1883-84; and none of the facts at present before him seem to the Lieutenant-Governor to warrant a departure from the conclusion which has, in the Resolutions referred to, been already communicated to the Inspector-General. Under these circumstances, the Lieutenant-Governor does not deem it advisable to advert further to this matter at present, but he will await the receipt of the letter embodying in full Mr. Bourdillon's views on the subject, and his reasons for still adhering to them. The number of such searches made during 1884-85 was 35,300, and the fees realized Rs. 66,320; while the number of ordinary searches was 21,596 and the fees received on account of them Rs. 24,706. The fees realized for the registration at the sudder office of documents which might have been registered at sub-registry offices amounted to Rs. 26,191 as compared with Rs. 24,900 in 1883-84. The reasons assigned for the preference shown for registration at the sudder office are, the Inspector-General remarks those which have been given before, viz. that better legal advice can be obtained at the head-quarters of a district: that better lodgings can also be obtained there: and, lastly, that the parties have frequent occasion to go to the sudder station on other business. These reasons seem to be sufficient.

17. During 1884-85, 2,225 documents were impounded for deficiency of stamp duty as compared with 2,098 during the preceding year. In 1,696 cases the Collector upheld the action of the registering officers, in 345 the documents were held to be correctly stamped, and 184 documents were pending adjudication at the close of the year. It is satisfactory to observe that the decision of the registering officer was reversed in only 17 per cent. of the cases. In 10 cases prosecutions for fraudulent evasion of the stamp duty were instituted.

18. The civil courts during the past year discredited 70 deeds as against 33 during the preceding year. The Inspector-General is inclined, looking to the fact that the number of districts in which deeds have been discredited is much larger than it formerly was, to attribute the increase to "the great vigilance and care in bringing these cases to the notice of the officers concerned rather than to any absolute increase." In 11 only of the deeds discredited was the cause an error of law or procedure in registration.

19. In 1883-84, as compared with 1882-83, there was an increase in the number of operations under the Act in 34 districts, and a decrease in 1. During the past year, as has been above remarked, there was an increase in 40 districts and a decrease in 5 districts only. Of the latter, the decrease was considerable only in the Sonthal Pergunnahs, where it amounted to 37.78 per cent., and in Bhagulpore, where it amounted to 1 per cent. In Singbhoon the decrease was 11.8 per cent., but the number of registrations in this district are so small that a difference of even a few registrations produced a large percentage. With regard to the Sonthal Pergunnahs, the Inspector-General explains that this falling "is said to be due to a general uncertainty prevailing among that timid and suspicious people as to the power of cultivators to transfer their hold by sale or mortgage." It is further added that "the cause of this mistrust is that it is yet undecided whether money-lenders can foreclose mortgages of 'Sud Bandaki' class executed by Sonthals; and until this question is settled, mahajans decline to lend money to the Sonthals." Mr. Bourdillon adds: "The explanation of it (the decrease) is given by the Registrar of Bhagulpore, if the suggestion made for the Sonthal Pergunnahs is correct; it no doubt has an effect on the registration of the neighbouring district of Bhagulpore, with

20. The total receipts for the past year were Rs. 10,74,711 as compared with Rs. 9,74,711 in 1883-84; while the total expenditure was Rs. 5,54,110 as compared with Rs. 5,04,755 in the preceding year, the surplus being Rs. 4,69,956 and Rs. 5,20,391 in 1883-84 and 1884-85 respectively. In addition to the expenditure above stated, there were certain items, payment for which is made by transfer, and which have not been shown in the total expenditure, which, in accordance with the usual practice, only shows actual cash expenditure. These items are—

	Rs.
Cost of stationery	5,026
Do of printing and registers	56,751
Do. of new buildings by the Public Works Department	4,334
Do. of cast-iron record-racks	5,180
Total	71,291

Deducting this amount from the amount of surplus shown, the net balance of Rs. 4,49,100 is obtained on the operations for the year.

21. The number of registration offices open at the close of the year was 290 as compared with 284. The increase was caused by six new rural offices being opened, one in the district of Bankoora, one in Hooghly, one in Chittagong, one in Mymensingh, and two in Noakhally. During 1883-84, eighteen sub-divisional *ex-officio* offices were converted into rural offices, and with satisfactory results, both as regards the number of presentations and the fees realized. During the past year eight other sub-divisional offices were converted into rural offices, and the Inspector-General anticipates other similar changes, as well as the opening of more rural offices during the current year. The Lieutenant-Governor will await the submission of any proposals the Inspector-General may from time to time wish to make regarding either the conversion of sub-divisional offices, or the opening of new rural ones. The extension of the facilities of registration is under the Lieutenant-Governor's consideration with a view to the requirements of the new Rent Law.

22. The following table shows the operations under the Mahomedan Marriage Registration Act since it came into force:—

YEAR.	Number of districts in which the Act was in force.	Number of offices open on the 31st March.	Number of marriages registered.	Number of divorces other than khulas registered.	Number of khulas registered.	Total number of ceremonies registered.
1876-77	14	77	2,555	402	161	3,118
1877-78	14	104	7,394	1,494	595	9,483
1878-79	14	103	8,161	1,795	771	10,727
1879-80	14	107	7,117	2,097	623	9,837
1880-81	14	106	5,777	1,574	739	8,090
1881-82	14	110	4,651	2,269	697	7,617
1882-83	14	112	3,908	3,217	766	8,091
1883-84	14	111	4,113	2,515	815	7,443
1884-85	14	112	3,973	2,940	967	7,880

There has been no change in the number of districts in which the Act is in force, and the number of offices open was the same as in the two years preceding 1884-85. There was an increase of 225 in the number of divorces, other than khulas, registered, and of khulas there was an increase of 62. The number of marriages registered was, however, less by 360 than the number registered during 1883-84, the total number of operations being only 7,410 as compared with 7,483 in the preceding year. The decrease is not large, but the total result is unsatisfactory as being below that of any year except 1876-77. The number of marriages registered increased in 8 out of the 14 districts, but the decrease of the number of marriages registered in Rungpore from 789 in 1883-84 to 358 in 1884-85 has of course had its effect on the returns for the past year. The decrease is owing, the Registrar of the district explains, as stated by Mr. Bourdillon, to "a thorough understanding by the parties that the registration does not carry any weight in courts of law, and that non-registration does not make the defaulters liable to any penalty or forfeiture. It is added that the zemindars also levy the marriage impost as before, and when the parties once pay the landlord, they refuse to pay the Marriage Registrar unless compelled by law to do so. Lastly, the registration of deeds-of-dower and divorce in the ordinary registration offices is considered

as more conclusive evidence of marriage than a resort to the office of the Mahomedan Marriage Registrar." There may be, and is no doubt, considerable weight in these reasons; but as all these causes for non-registration existed in 1883-84 as well as in 1884-85, the Lieutenant Governor cannot accept them as at all fully explaining the decrease of 54 62 in the number of registration in one year, more especially when looking to the fact that in the adjoining districts of Dinagepore and Bogra there was an actual increase in the number of marriages registered as compared with the preceding year. The greatest number of ceremonies was registered in Chittagong, viz. 2,550, Dacca comes next with 858 and Rajshahye with 844. No other district registered as many as 600 ceremonies. Of offices, 598 ceremonies were registered in the office of Satkania in Chittagong, which has considerably more than double the number of registrations in any other office, except that of Patiya in the same district, in which they amounted to 371. The Inspector-General remarks that "the Act is falling more and more into desuetude in the districts to which it has been extended. Notwithstanding the recent revision of the rules and procedure under Act I (B.C.) of 1876, the total number of ceremonies registered has fallen off compared with the previous year; but it should be remarked that there has hardly yet been sufficient time to judge whether the changes carried out will cause an increase in the number of ceremonies registered or not." The next report will be awaited when Government will be in a better position to ascertain the effect of the alterations in the rules and procedure under the Act, to which reference was made in the Resolution on the Report of the working of the Act for the year 1883-84. Most of the Mahomedan registration offices were inspected during the year. It is reported that those inspected were found in good order, and that the conduct of the Registrars was satisfactory.

23. During 1884-85 only 838 inspections of registration offices were made as compared with 884 during the preceding year. As in 1883-84, the decrease has again been due to the falling off in the number of inspections made by District Registrars, which decreased from 200 to 192, in the number made by Sudder Sub-Registrars, which fell from 92 to 64, and in the number of those made by Sub-Divisional Officers which fell from 110 to 107. On the other hand, there has been an increase of 20 in the inspections by Special Sub-Registrars, and Mr. Bourdillon considers that the more searching nature of their enquiries more than compensates for a falling off in the number of inspections by District Registrars, who have not leisure as a rule for long and elaborate inspections. Mr. Bourdillon draws special attention, however, to the falling off in the inspections made by Sudder Sub-Registrars. This point calls for serious notice, and the Inspector-General should at once direct the attention of District Registrars to the omission. The number of stamp inspections made during the year was 428 as compared with 465 made during the preceding year.

24. Mr. Handley was in charge of the office of Inspector-General of Registration from the commencement of the year till the 7th May 1884, when Mr. Paul succeeded him and remained in charge till he went on leave on the 1st November, between which time and Mr. Bourdillon's return on the 16th February, Mr. Bolton was in charge of the office. The Lieutenant-Governor notes the favourable remarks made concerning the manner in which Mr. J. F. Harrison and Baboo Hari Chaitanya Ghose performed their duties as First and Second Inspectors. Credit is also given to Mr. Handley for diligence in the discharge of his duties during the short time that he reverted to his substantive appointment as First Inspector, but as that period is not stated, and Mr. Handley is shown to have made only 18 inspections in that capacity, the Lieutenant-Governor can only take it for granted that the Inspector-General's commendation was deserved. The names of the officers referred to, with an extract from the Report, will be forwarded to the Appointment Department for information. Mr. Bourdillon remarks that, where so many registering officers have done well, it is impossible to select any for special mention without doing injustice to others equally efficient. The Lieutenant-Governor would have thought that in so large a department some officers must have singled themselves out of the crowd by exceptionally good work. On the other hand, the failure of those who have not given satisfaction in the discharge of their

duties should always be noticed. There is no department of the public service in which especial care in supervising the work of individual officers is more urgent than in the Registration Department.

25. From a review of the year's operations, the Lieutenant-Governor is satisfied with the general efficiency of the Registration Department. The proposal for opening a large number of rural offices in anticipation of the expansion of the department by the coming into operation of the Bengal Tenancy Act will be dealt with separately.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Inspector-General of Registration for information and guidance.

Ordered also that extract paragraph 24 of this Resolution, and extract paragraph 131 of the Report, be forwarded to the Appointment Department of this Office for information and guidance.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Chief Secretary to the Govt. of Bengal.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE LICENCE-TAX FOR 1884-85.

FINANCIAL DEPARTMENT.—LICENCE-TAX.

Darjeeling, the 4th November 1885.

RESOLUTION.

READ—

The Report on the Administration of the License-tax for 1884-85.

Read also—

The Report for 1883-84 and the Resolution recorded on it.

As in previous years, the license-tax in Bengal was levied under Act II (B.C.) of 1880. The number of special assessors employed was the same as in the preceding year, namely 46; three assessors being employed for Calcutta, one for the Suburban Municipality, and one for each district, except Darjeeling and Singbloom, where the number of assesseees was not sufficiently large to warrant the expense of appointing an assessor. Of the 46 assessors, two were of the rank of Sub-Deputy Collector, the remainder being of lower status. The collection of the tax was as usual commenced in the majority of districts soon after the period allowed by sections 16 and 17 of the Act, the assessment lists of the preceding year, as they stood after the disposal of objections and appeals, being adopted as the basis of operations; while in a few districts, where the assessment had been hurriedly made, the issue of notices was postponed until the assessors had finished their enquiries and submitted revised lists.

2. The total number of villages visited by the assessing officers was 25,619, including 617 streets in Calcutta, against 27,067 in the previous year. It is observed that, in the majority of cases, proper attention was paid by district officers to the direction of the assessors' movements, though in a few districts, which the Board enumerate, greater activity might have been displayed with advantage. A considerable number of villages also were visited for purposes of assessment by officers other than assessors. The district most conspicuous for activity in this respect was Durbhunga, where as many as 456 villages were visited by officers on the regular staff. A very creditable out-turn of work is also noticeable in the districts of Tipperah, Midnapore, Bhagulpore, Dacca, Furreedpore, Backergunge, Monghyr, Hooghly, and Mymensingh.

3. The gross number of assessments, after eliminating double centres and allowing for the revision of the lists by Collectors, amounted to 76,250. Of these 5,681 were exempted on objection and 310 on appeal, leaving 70,259 persons on the list of assesseees on the 30th June, as compared with 71,293 in 1883-84. The outstanding balance on the 30th June 1884 was Rs. 10,022, and of this the greater part had to be remitted, the number of persons finally assessed in 1883-84 being reduced to 70,552. The following table compares the number of assesseees in each class in the final lists of 1883-84 with those of the year under review:—

					Number of assesseees	
					On the final lists in 1883-84.	On the lists of 30th June 1885.
				Rs.		
Class	I	500	387	389
"	II	200	725	696
"	III	100	1,443	1,413
"	IV	50	3,613	3,587
"	V	20	14,836	14,714
"	VI	10	49,548	49,460
Total				...	70,552	70,259

The figures show that there was a falling off of 293 assesseees, and there will be a still further decrease when the enquiries in regard to the outstanding balance on the 30th June 1885, amounting to Rs. 10,223, have been completed. As the figures now stand, there was a falling off, as compared with 1883-84, of 29 assesseees in Class II, of 30 in Class III, of 26 in Class IV, of 122 in Class V, and 88 in Class VI, while there was an increase of only

4. The following table shows the incidence of the license-tax in each of the divisions of the province :—

Bhagulpore	50 persons to Re. 1.
Rajshahye	51 ditto.
Dacca	58 ditto.
Presidency (omitting Calcutta)	61 ditto.
Chittagong	65 ditto.
Burdwan	69 ditto.
Patna	75 ditto.
Chota Nagpore	82 ditto.
Orissa	100 ditto.

Taking the population of Bengal at 66½ millions, one person in every 946 paid the tax, the average incidence being Re. 1 to every 46 persons; but if Calcutta be excluded, the general incidence was Re. 1 to every 64 inhabitants. The incidence was highest in Calcutta, Darjeeling, Howrah, 24-Pergunnahs, Maldah, Bhagulpore, Bogra, Monghyr, Dinagepore, and Dacca; and lowest in Singbhoon, Khoolna, Southal Pergunnahs, Bankoora, Cuttack, Shahabad, Pooree, Chumparun, Nuddea and Burdwan.

5. The number of objections filed during the year was 19,412 or 25·4 of the total number of persons originally assessed, the corresponding percentage in 1883-84 being 26·2. In 11,852 cases the assessments were upheld, in 1,877 they were modified by the transfer of the objector to a lower class, and in 5,681 cases the assessments were cancelled. The successful objections thus amounted to 7,558 or 38 per cent. of the total number of petitions filed, against 39 per cent. in the previous year. The proportion of all objections to assessments was highest in—

Pooree	58·03
Durbhunga	41·2
Moorsheadabad	39·2
Cuttack	39·06
Gya	37·5
Balasore and Hazareebagh	36·4
Monghyr	35·4

And the proportion of successful objections to assessments was highest in the following districts :—

Pooree	31·5
Hazareebagh	18·8
Moorsheadabad	18·2
24-Pergunnahs	17·2
Durbhunga	17·
Nuddea	16·5
Khoolna	15·8
Gya	
Balasore	15·

These results are most unsatisfactory; and the Lieutenant Governor regrets to find that after the considerable experience of many years assessments are still very loosely and carelessly made in many districts. The work appears to have been particularly badly done in Pooree, and a special explanation will be called for from the officers concerned.

The number of appeals against the orders passed on objections was 1,545, against 1,747 in 1883-84. Of this number, the assessment was upheld in 969 cases and reduced in 197 cases, while in 310 cases the assesses were exempted altogether. The districts in which the right of appeal was most largely exercised are Calcutta, Cuttack, Durbhunga, Chittagong, Sarun and Monghyr. In the entire province, out of 76,250 assessments, 5,991 or 7·8 per cent. were cancelled on objection or appeal, and 2,974 or 2·7 were modified. This result, though showing some improvement on that of the previous year, when out of 77,613 persons assessed, 6,320 or 8·1 per cent. were entirely exempted, and 2,333 or 3 per cent. were assessed on objection in lower grades, is still unsatisfactory. The number of appeals pending on the 30th June was 69, against 31 in the previous year. The number of applications to Commissioners under section 21 of the Act was 70, exclusive of those in Calcutta. Of these, 48 were rejected, 6 were granted in part, and in 10 cases the assessments were cancelled. Six cases were pending at the close of the year. The majority of the references were made in the divisions of Patna, Orissa and Bhagulpore.

6. The following table shows the demand, remissions, collections, and balances up to the end of June for each of the last two years:—

CLASS.	Rate of tax.	Gross demand.		Remissions before realization.		Remaining demand.		Collections.		Refunds.		Net collections.		Balances.	
		1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.	1883-84.	1884-85.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
I ...	500	2,40,000	2,36,700	45,000	36,500	2,05,000	2,00,250	2,05,000	2,03,250	2,500	6,250	1,93,500	1,94,000
II ...	200	1,75,000	1,72,500	25,200	20,200	1,49,800	1,48,600	1,49,800	1,48,600	3,400	4,400	1,45,000	1,39,300
III ...	100	1,75,550	1,70,400	27,100	30,000	1,48,450	1,45,600	1,48,250	1,45,000	4,100	4,200	1,44,150	1,40,800	200	50
IV ...	50	2,10,225	2,16,600	33,700	34,500	1,76,525	1,81,000	1,75,075	1,83,530	4,550	4,650	1,80,525	1,78,840	430	60
V ...	20	3,40,070	3,35,380	41,000	37,170	3,02,440	2,98,190	3,00,334	2,96,832	4,040	4,220	2,96,294	2,91,612	1,700	2,30
VI ...	10	5,00,300	4,91,780	62,215	62,825	5,07,145	4,98,955	4,99,478	4,92,050	5,505	4,555	4,93,973	4,87,495	7,667	6,90
Total	17,33,405	16,90,900	2,38,845	2,20,095	14,94,560	14,70,495	14,84,537	14,60,271	30,895	28,275	14,53,642	14,31,996	10,023	10,32

The figures show a reduction of Rs. 33,815 in the gross demand as compared with 1883-84. Remissions and refunds together amounted to Rs. 2,57,370. Of this sum, however, Rs. 1,03,910 were re-assessed by the transfer of the assesses to some other class, the actual remissions and refunds amounting to Rs. 1,53,460. Of this amount Rs. 1,27,640 were remitted before realization, and Rs. 25,820 refunded after realization. The amount remitted or refunded under the operation of the rule by which a person is liable to be taxed in only one place in British India was Rs. 18,260. The net remissions and refunds, therefore, amounted to Rs. 1,35,200 or 8.4 of the gross demand of Rs. 15,96,690. There was a falling off in the total receipts from the tax, up to the 30th June 1885, of Rs. 21,616 or 1.4 per cent. The decrease is attributed partly to the general depression in trade, and partly to the further revision of the assessments of the previous year.

7. There was a falling off in the net receipts in 31 districts, and an increase in 14. The percentage of decrease was highest in the divisions of Orissa (7.9), Burdwan (3.9), and Chota Nagpore (3.3). In the following 16 districts there was a falling off of over 3 per cent:—

Districts.		Collections in 1883-84.	Collections in 1884-85.	Decrease.	Percentage of decrease.
		Rs.	Rs.	Rs.	
Pooree	...	10,380	8,830	1,550	14.9
Pubna	...	24,370	21,172	3,198	13.1
Hazareebagh	...	21,857	18,999	2,858	13.07
Hoochly	...	21,380	18,983	2,397	11.2
Gya	...	29,464	27,040	2,424	8.2
Cuttack	...	18,570	17,044	1,526	8.2
Bankoora	...	9,318	8,640	678	7.2
Shahabad	...	20,040	18,970	1,070	5.3
Maldah	...	21,192	20,048	1,144	5.3
Moorsheadabad	...	19,674	18,738	936	4.7
Singbhoom	...	2,620	2,783	137	4.6
Blagulpore	...	51,908	49,912	1,996	3.8
Chumjaron	...	17,850	17,235	615	3.4
Howrah	...	25,590	24,720	870	3.3
Jessore	...	29,280	28,360	920	3.1
Rungpore	...	39,900	38,665	1,235	3.09

The falling off in Pooree and Cuttack is attributed to the rectification of the over-assessment of previous years; but from the proportion of successful objections to assessments in these districts (31.5 in Pooree, and 14.9 in Cuttack), it appears that they were again over-assessed in the year under report. The Board remark: "It is almost every year the case that the assessment lists first submitted by the special officers appointed for revising the tax show a considerable increase over the demand finally determined at the close of the preceding year, but when further scrutinized on objection and appeal, they come to show a figure even less than that demand. This might to a great extent be avoided, if the instructions issued to the assessors were sufficiently clear to indicate the mode of revision expected from them." The Board have very properly drawn the attention of the Collectors to the importance of giving such instructions to the assessors before they begin their work of revision. The Lieutenant-Governor has no doubt that much of the unpopularity of the tax is due to the injudicious proceedings of assessors,

who imagine that the only means open to them of earning credit in their temporary appointments is to show a large increase in assessments, and he trusts that district officers will do their best, by clear instructions to the assessors, and careful supervision of their work, to counteract this tendency wherever it appears. The decrease in Pubna is attributed partly to the large number of exemptions caused by fluctuation in the circumstances of the trading class and the general failure of crops, and partly to the careful revision of the assessments of previous years. The explanation offered in respect of the decrease in Hazareebagh and Gya is somewhat similar to that given for Pubna. In Hooghly the Collector attributes the decrease to dulness of trade, though the Commissioner is of opinion that the result would have been less unsatisfactory if the assessor had not, in spite of express instructions, attempted to revise the assessments in the whole district within the short period of four months for which his services were entertained. Naturally the work was performed in a perfunctory way. The falling off in Bankoora is due to remissions granted to several persons dealing in money, grain, and lac, whose business has suffered considerably in consequence of continued droughts and dulness in the lac trade. The exemption of petty traders whose income had fallen owing to slackness in the grain and sugar trades, and the transfer of some assesseees to other districts which were declared by them as the principal place of their business, are assigned as causes of the decrease in Shahabad, while the decrease in Maldah is attributed in a general way "to the reduced circumstances of the assesseees and the altered condition of trade." The causes given for the decrease in Moorsshedabad are the dulness of trade in silk and the partial failure of crops. In Singbhoom the decrease is attributed to revision of assessments. This was also the case in Bhagulpore, where the depression of trade, owing to bad harvests, was an additional factor. In Chumparun the decrease is ascribed to the falling off of profits of several assesseees, and in Howrah to the transfer of several assessments to Calcutta and other districts, and to the slackness of trade. The chief cause of the decrease in Jessore and Rungpore was the depression of trade caused in the former district by the heavy fall in the price of sugar, and in the latter by the fall in the prices of the principal articles of local merchandize.

In the Resolution on the Report for 1883-84, it was remarked that the incidence of the tax was suspiciously low in Rajshahye as compared with the incidence for the whole division, and the Lieutenant-Governor desired that the assessment work of the district should be carefully watched by the Collector. The matter is fully dealt with in the present report, and the Lieutenant-Governor is disposed to agree with the Board that the district is poorer than has been hitherto supposed.

In Calcutta the collections up to 30th June 1885 amounted to Rs. 4,04,570, against Rs. 4,18,670 in the previous year. There was a decrease of 45 in the total number of assesseees with a corresponding decrease of Rs. 9,100 in receipts. The decrease occurred in all the classes except Class VI, and is ascribed to the licenses having been taken out in other districts or provinces, and to the general depression in trade.

8. An increase occurred in the receipts in 14 districts, ranging from 6 per cent. in Mozufferpore to 14.6 in Noakholly. The districts which show an increase of over 3 per cent. are—

Districts.	Collections in 1883-84.	Collections in 1884-85.	Increase in 1884-85.	Percentage of increase
	Rs.	Rs.	Rs.	
Noakholly	... 10,000	11,460	1,460	14.6
Chittagong	... 16,610	18,860	2,250	13.5
Dinagapore	... 31,945	34,290	2,345	7.3
Lohardugga	... 16,234	17,234	1,000	6.1
Sarun	... 36,212	38,135	1,923	5.3
Mymensingh	... 46,111	48,244	2,133	4.6
Purneah	... 32,110	33,430	1,320	4.1

The reason advanced for the increase in Noakholly is that the past year was one of great prosperity for the bulk of the population, and this had the effect of increasing the number of assesseees and the amount of collections. The Collector of Chittagong attributes the increase in his district to the "due attention paid by the assessing staff to their duty." The increase in

Dinagapore was chiefly derived from new assessments and enhancements made in the second and the last three classes, and in Sarun from a number of new assessments made under the two lowest classes. In Lohardugga the increase was due to careful enquiry and consequent revision of assessments in parts of the district, while the enhancement in Purneah was the result of a thorough revision of assessments in the Kishengunge sub-division. The administration of the tax in Mymensingh was the subject of unfavourable comment in the Resolution on the last report, and an explanation was called for of the circumstances under which it was necessary to grant a large number of remissions and reductions in the Attia sub-division. The explanation given is that "the assessment was originally much too high, and there were in consequence large reductions in 1882-83. The remedial measures then adopted, however, do not seem to have gone far enough, for during 1883-84 there were further petitions of objection which the then sub-divisional officers, Baboos Atul Chandra Chatterjee and Kasi Kinkar Sen, after due enquiry allowed. Whether the objections were really well founded or not it is impossible now to discover. The Collector is of opinion that every possible allowance was made, though why, if the original assessment was too high, the petitioners did not come forward sooner to object, does not appear. The sub-divisional officer at any rate showed carelessness in not making enquiries with a view to discovering fresh assesses. Many persons appear to have been reduced owing to separation of business: this may have been a legitimate cause of reduction, but it also afforded good ground for enquiry whether the person who had set up separately was not liable. A large number of remissions in the two preceding years was also due to the low prices of salt and jute—two of the principal articles of trade—and to causes such as accidental loss, closure of business and transfer of assessments to other districts." Since then the assessments have undergone a revision which has led to an increase in receipts of Rs. 2,153 or 4·6 per cent.

9. The percentage borne by remissions and refunds was below that of the previous year, the highest percentage being 26·6 in Pooree. It exceeded 15 per cent. in seven districts, in thirteen it ranged from 10 to 15, in twenty from 5 to 10, while in the remaining five districts it ranged from 4·6 to 6. The balance on 30th June 1885, appertaining only to some seven districts, amounted to Rs. 10,223, the bulk of which is irrecoverable, and will have to be written off. There was again a decrease in the year of Rs. 5,962 in the amount of penalties and costs realized, which shows that assesses have been more punctual in the payment of the tax. The cost of collection was also considerably reduced, the percentage of charges to receipts having fallen from 6·1 in 1883-84 to 5·9 in the year under review. The total amount expended on the license-tax operations of the year, up to the 30th June 1885, was Rs. 87,159, against Rs. 94,249 in 1883-84.

10. There is little to add to the remarks recorded in previous years with regard to the popular feeling on the subject of the tax. It affects only a small section of the population, and while it can never be more popular than any other form of direct taxation, it is now quietly accepted as inevitable by the majority of those who are called upon to pay it. The absence of any complaint of harassment or extortion shows that the Act, on the whole, worked smoothly during the year under review.

11. The names of the officers who are reported to have given special attention to this branch of their duties will be noted in the Appointment Department. The Lieutenant-Governor again desires to thank the Board for their careful administration of this branch of the revenue during the year.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the Board's Report, be submitted to the Government of India, Finance and Commerce Department, for information, and that a copy of the Resolution be forwarded to the Board of Revenue.

Ordered further that extract paragraph 11 of the Resolution, together with extract paragraph 39 of the Report, be forwarded to the Appointment Department for information.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR.

RESOLUTION ON THE REPORT ON THE CHARITABLE DISPENSARIES IN BENGAL FOR 1884.

MUNICIPAL DEPARTMENT—MEDICAL.

Calcutta, the 4th November 1885.

RESOLUTION.

READ—

Report on the Charitable Dispensaries in Bengal for the year 1884

Read also—

The Report for 1883, and the Resolution recorded upon it.

In the Resolution of the Government of India, Home Department, No. 3—163-74, dated the 7th May 1883, instructions were given that in preparing Statement I, appended to the Annual Dispensary Report, dispensaries should be divided into three classes with reference to their financial constitution and relations; class I comprising all hospitals and dispensaries chiefly supported by the State, class II all institutions supported by local funds, and class III all private institutions. Class III was further sub-divided into—

- (A)—Institutions entirely maintained at the cost of private individuals or associations, and
- (B)—Institutions supported by private subscriptions or guarantee, but receiving aid from Government or local funds.

Local Governments were left free to adopt any other form of classification which might be considered most convenient for administrative purposes. In view of the advantages of a uniform and complete system of classification, the Lieutenant-Governor has adopted and prescribed for general use the form suggested by the Government of India.

On the 31st December 1883 there were 230 dispensaries. During 1884 four dispensaries were established and four were abolished. Under the new classification five of the institutions were in class I, 86 in class II, 81 in class III (A), and 58 in class III (B).

2. The system under which Government had undertaken to provide employment to all candidates passing the Licentiate's examination came to an end in 1883, and during that year no Assistant Surgeons were admitted to the service. In 1884, it is reported 21 Assistant Surgeons were received by transfer from the Imperial list. Twenty-nine civil hospital assistants were appointed, of whom 20 came from the Campbell Medical School, five from Dacca, two from Patna, and two from Cuttack. The report for 1883 contained some unfavourable comments on the qualifications of the civil hospital assistants recruited from the Patna Medical School. The Inspector-General has devoted special attention to the question during the year, and now reports that, as far as professional ability is concerned, the Patna men are up to the standard. He adds, however, that "their general want of knowledge of English, and inability to converse in Bengali, are drawbacks to their employment in the southern and eastern districts of the Province;" and he quotes certain extracts from the report of the Civil Surgeon, the late Dr. Shaw, which prove that the standard of general education among the Patna students is very low. Dr. Shaw contemplated raising the standard of entrance examination, and encouraging the study of English by the offer of scholarships, and if the matter is to be taken up, it will be necessary to refer it to Government through the Educational Department.

There was not much change in the disposition of officers in 1884; but in several cases local bodies declined to pay the higher salaries earned by their medical officers on passing the departmental examination, and applied for the services of men of lower grades. The question of the precise limits of the liability of local bodies in such cases is now under the consideration of Government. During the year the Secretary of State granted an important concession to supernumerary Assistant Surgeons by ruling that supernumerary service would count towards leave and pension.

3. Returns have been received from 229 out of the 230 dispensaries of the Province, and the following table compares the amount of work done in them during 1884 and 1883:—

	IN-DOOR.										OUT-DOOR.									
	Under 25.	25 to 50.	50 to 75.	75 to 100.	100 to 250.	250 to 500.	500 to 750.	750 to 1,000.	Upwards of 1,000.	Total.	Under 250.	250 to 500.	500 to 750.	750 to 1,000.	1,000 to 2,500.	2,500 to 5,000.	5,000 to 7,500.	7,500 to 10,000.	Upwards of 10,000.	Total.
1884 ...	16	14	11	16	43	23	5	3	1	132	2	87	3	11	68	79	36	11	19	229
Percentage ...	12.12	10.81	8.33	12.12	32.38	17.42	3.79	2.27	.70	100	1.37	11.31	3.79	8.40	29.09	34.5	15.72	4.80	8.30	100
1883 ...	18	14	11	11	50	14	6	1	1	130	...	1	3	11	75	75	32	10	16	233
Percentage ...	13.85	10.77	8.40	8.46	38.46	10.77	4.61	.77	.77	10045	1.35	8.46	33.03	33.03	14.35	4.48	7.17	100

The total number of dispensaries which received in-door patients was 132 against 130 in the previous year.

4. Of the 229 dispensaries, 50 were visited by the Civil Surgeons daily or frequently, four more than four times during the year, eleven four times, thirty-two three times, seventy-two twice, forty-one once only, seventeen were not inspected at all, and no information was furnished of the remaining two dispensaries. Of the seventeen not inspected at all, the Lieutenant-Governor regrets to notice that eleven were in the district of the 24-Pergunnahs, and the omission requires the attention of the Head of the Department. The Inspector-General observes:—"The inspection reports have been carefully drawn up, and are closely searching in their interrogations. They show, on the whole, a fairly satisfactory state of things. I observe a considerable interest evoked in sanitary matters, which is a healthy sign, and one which it is to be hoped Civil Surgeons will continue to encourage."

5. The following table shows the number of patients treated in 1884 and the previous seven years, and the ratio of mortality among in-patients:—

	In-patients treated.	Out-patients treated.	Total.	Mortality among in-patients per cent.
1877 ...	23,954	873,631	897,585	17.34
1878 ...	25,373	927,743	953,116	20.01
1879 ...	24,847	863,993	888,840	17.78
1880 ...	23,507	884,986	908,493	16.37
1881 ...	23,444	947,531	970,975	15.8
1882 ...	23,408	954,135	977,543	15.73
1883 ...	22,408	913,751	936,159	14.13
1884 ...	25,077	963,685	988,762	14.75

The total number of sick attending the dispensaries, as recorded during the year, was larger than that of any previous year in the list. There was an increase of 52,411 patients, as compared with the number treated in 1883. The Inspector-General attributes this mainly to greater care in recording entries, in consequence of more attentive inspections, and does not think it probable that the attendance of patients was actually larger, owing to increasing competition of private practitioners. The Lieutenant-Governor is glad to learn that duly qualified medical men are establishing themselves in private practice throughout the country, and that "the majority may be seen to be gaining a fair and honourable livelihood by the exercise of their profession." This is no doubt, as the Inspector-General calls it, "a healthful outcome of our medical educational system." The object of that system was not merely to secure a constant supply of subordinate medical officers for the Government service, but also to raise the standard of medical knowledge and encourage the practice of medicine and surgery on established scientific principles. That private practitioners, possessing the necessary qualifications, should be able to compete successfully with public medical charities, is a satisfactory result; the Lieutenant-Governor will gladly welcome any diminution in the number of patients treated at these charities, which can be unmistakably proved to be caused by such competition.

6. The total income and expenditure of the dispensaries during the year are shown in the following table :—

<i>Income.</i>				Rs.	A.	P.
Cash balance on 1st January 1884	71,421	12	4
From Government—						
As salaries	13,855	14	11
„ registers and forms	1,468	14	0
„ European medicines	278	15	6
For diet of police cases	1,887	14	11
Special allowances	1,159	15	10
Total	18,651	11	2
From local or other funds						
„ municipal funds	35,905	15	4
Interest on investments	1,16,766	7	1
Sale of securities or withdrawal of deposits	27,914	4	10
European subscriptions	15,769	5	4
Native subscriptions	16,483	8	10
Total	1,11,086	10	10
Total	4,13,999	11	9

<i>Expenditure.</i>						
Establishment	2,04,270	2	5
Bazar medicines	9,581	11	11
European medicines, from Government store or purchased otherwise	41,389	6	6
Diet	38,893	10	5
Miscellaneous charges	28,272	9	0
Buildings or repairs	27,305	0	11
Invested during the year	12,650	3	3
Total	3,62,362	12	5
Cash balance on 31st December 1884	51,636	15	4

The opening balance on 1st January 1884, as shown above, is less by Rs. 2,514 than the closing balance of the previous year, as given in that year's report. The difference is explained to be due to the closure of four dispensaries, to deficits found in the funds of three dispensaries, and to the readjustment of the accounts of one dispensary.

7. The total receipts from Government amounted to Rs. 18,651 in 1884, against Rs. 39,511 in 1883, Rs. 41,269 in 1882, and Rs. 1,06,384 in 1881. Out of the Rs. 18,651, the sum of Rs. 5,761 was contributed to municipal dispensaries. After deduction, however, of the cost of registers and forms, and of diet in police cases, the contribution towards municipal dispensaries amounted to Rs. 3,106 against Rs. 22,834 in 1883. Of this, Rs. 3,032 represents salaries of medical officers, and Rs. 74 two small grants for repairs. The Government contribution towards dispensaries that are not municipal institutions amounted to Rs. 12,890, against Rs. 14,494 in 1883, thus showing a decrease of Rs. 1,604.

8. The receipts from local sources other than municipalities amounted to Rs. 35,906 against Rs. 44,672 in the previous year. Of this, municipal dispensaries received Rs. 9,340. The amount of subscriptions collected from Europeans was Rs. 16,483 and from natives Rs. 1,11,086. Of these subscriptions, Rs. 47,436 were paid in aid of municipal dispensaries, and Rs. 80,133 in aid of other institutions. The corresponding figures for 1883 were Rs. 55,742 and Rs. 80,480. As compared with the preceding year, there was thus a falling off in the amount of subscriptions given to municipal dispensaries.

to the extent of Rs. 8,306. This decrease is probably attributable partly to subscriptions being withdrawn by individuals under the impression that the dispensaries should be supported by municipal funds, and partly to the crediting of subscriptions to the general municipal revenues instead of keeping them separate in the accounts. The amount received by the sale of securities and withdrawal of deposits was Rs. 15,769, against Rs. 15,623 in 1883. Government securities belonging to dispensaries, vested in municipalities, were sold to the extent of Rs. 4,800. The question whether such sales can be effected by municipalities without the sanction of Government was under consideration during the year; and it was decided that the sanction of Government is necessary in each case. The interest on investments amounted to Rs. 27,914 against Rs. 27,911 in 1883. The amount contributed by municipalities was Rs. 1,16,766 against Rs. 1,23,057 in 1883, showing a decrease of Rs. 6,291 attributable to a better adjustment of accounts.

The gross expenditure on dispensaries, exclusive of the amounts invested, was Rs. 3,49,712 against Rs. 3,60,347 in 1883, thus showing a decrease of Rs. 10,635. Medical stores were obtained from the Government Store Department and from private druggists. Of the 227 dispensaries whose accounts were received, 170 obtained their supplies from private sources. The cost of diet was Rs. 38,893 against Rs. 33,608 in the previous year, and this increase is attributable to the increase in the daily average number of in-patients. The average cost of each diet varied from two annas nine pies to seven pies.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Government of Bengal.

**RESOLUTION ON THE ANNUAL REPORT OF THE EXCISE
DEPARTMENT FOR THE YEAR 1884-85.**

FINANCIAL DEPARTMENT—EXCISE.

Darjeeling, the 9th November 1885.

RESOLUTION.

READ—

The Board's Report on the Administration of the Excise Department for 1884-85.

THE Report of the Commission appointed to enquire into the system of excise on country spirits, to which reference was made in the Resolution recorded last year, engaged the attention of Government during the year under review. It has been pointed out by the Commission that a great deal of the increase which has taken place in the consumption of spirit is due to the operation of social, moral, and religious changes among the people, and to the increase in the purchasing power of the consuming classes, but that drinking has also been much encouraged by the cheapening of liquor and the facilities which have been afforded for procuring it. The report shows that the preventible causes of increase have resulted, not from any inherent defect in the outstill system as applicable to the province at large, but from errors in administration which can be corrected; that the central distillery system is unsuited to rural tracts; that during the prevalence of this system there was illicit distillation outside, and fraud and peculation inside, the sudder distilleries; and that, while there was demoralization among those concerned in the liquor traffic and those employed to supervise them, innocent persons suffered grievous hardship and annoyance at the hands of the preventive establishment. For the province at large the Commission recommend the maintenance of the outstill system with certain modifications, and the re-establishment of central distilleries where there is a large drinking population in a comparatively small and well-defined area, and where there is a reasonable probability of an effective supervision by a supervising agency which can itself be supervised. They find that these conditions are only satisfied in the cities of Patna, Gya, Arrah, Chupra, Bettiah, Mozufferpore, Durbhunga, Monghyr with Jamalpore, Bhagulpore, Moorshedabad with Berhampore, Burdwan and Dacca; and the sudder distillery system has therefore, with the sanction of the Lieutenant-Governor, been already introduced into these towns, with the exception of Patna, Arrah and Mozufferpore, where, owing to the want of suitable buildings, the introduction of the system has been deferred till 1886-87. As regards other towns, the Commission are in favour of the maintenance of the outstill system, being of opinion that in these places the evils of monopoly can be guarded against, while it would not be possible to secure the agency required to guard against the dangers and evils inherent in the central distillery system. They propose, however, that manufacture should not be permitted within the limits of the towns, but that a site should in each case be acquired and enclosed for the manufacture of spirit outside the inhabited part of the town, and that no still should be allowed to work except in this enclosure. With regard to shops, they suggest that the Collector should be required to notify to the Municipal Commissioners the sites selected by him; that should the Commissioners object to any, the Collector should carefully consider their objections; and if he should not agree with them, should refer the matter to the Commissioner of the Division for decision, pending which he should not allow the proposed shops to be opened on the sites objected to. The report also embraces *inter alia* proposals for the limitation of the aggregate capacity of the outstills in each district, and of the aggregate capacity of the fermenting vessels used in each outstill, the fixing of rates of duty for each district, the regulation of the number of stills, the selection of sites, and the establishment of a system of standard metal stills, registered and stamped, when the capacity exceeds ten seers.

These proposals have been generally approved by the Lieutenant- and the Board have been asked to submit a detailed report on the

several recommendations of the Commission, after consulting selected local officers and inviting the opinion of public bodies and Associations throughout Bengal. This report has not yet been received, but some of the recommendations of the Commission have already been carried out, and the Lieutenant-Governor has sanctioned the establishments which the Board considered necessary for the work of initiating the proposed change.

As the Lieutenant-Governor intends to deal with the whole question on the receipt of the Board's views, he will confine himself in the present Resolution to an examination of the Board's annual report.

2. The following statement shows the total excise revenue and charges for the province during 1884-85 :—

PERIOD.	Revenue.	Charges.	Net revenue.	Percentage of charges.
	Rs.	Rs.	Rs.	
Average of 1879 to 1883-84 ...	90,31,000	2,64,142	87,66,858	3.01
1883-84 ...	1,04,23,171	2,55,571	1,01,67,600	2.4
1884-85 ...	1,00,48,968	2,91,349	97,57,619	2.8
Difference of the past two years ...	—3,74,203	+35,778	—4,09,981	+4

The revenue of the year shows an increase of Rs. 10,17,968 over the average of the preceding five years. The fluctuations under each head of revenue are exhibited in the following table :—

ARTICLES.	REVENUE.			IN 1884-85 COMPARED WITH 1883-84.		IN 1884-85 COMPARED WITH 1879 TO 1884.	
	Average of 1879-80 to 1883-84.	In 1883-84.	In 1884-85.	Increase.	Decrease.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Country spirits ...	43,92,047	52,22,731	48,55,211	3,67,520	4,62,204
Rum ...	1,10,013	1,14,570	1,08,707	15,860	21,206
Imported wines, &c. ...	1,74,922	2,00,705	2,24,218	27,423	53,296
Tari ...	6,51,377	6,63,603	6,74,365	10,672	10,988
Pachwai ...	1,03,345	1,83,055	1,58,820	24,234	4,525
Charras ...	4,750	2,910	1,610	1,291	3,131
Sathi, sabzi or bhanga ...	28,791	33,278	34,364	1,086	5,573
Majum ...	2,370	2,262	2,330	107	31
Mudat ...	83,462	100,045	91,040	992	7,578
Chundoo ...	24,323	20,216	28,549	2,333	4,220
Spirits used for arts ...	524	373	411	38	113
Ganja ...	16,61,022	19,73,713	19,87,600	13,887	3,36,578
Opium ...	17,23,685	10,05,181	18,83,032	21,549	1,00,247
Miscellaneous ...	6,509	4,071	3,793	278	2,776
Total ...	90,31,000	1,04,23,171	1,00,48,968	50,538	4,30,741	10,40,750	31,782

Judging from the results shown in the two foregoing tables it would appear that there was a falling off of Rs. 3,74,203 in the receipts during the year under review as compared with the previous year. This decrease is not, however, real, as appears from the following passage in the report :—

“On financial grounds, and for purposes of accounts, it has been the practice to show, as the excise revenue for the year, all sums actually realized and credited to Government between the 1st April and 31st March. The figures so obtained do not and cannot correctly represent the actual results of the excise administration. Leaving arrears out of the question, the figures frequently include advance payments which do not strictly belong to the year to which the report refers, the inclusion of which may entirely alter, from an administrative point of view, the aspect of the excise operations for the year. It seldom happens that the advance fees of one year counterbalance those of another. Even if this were the case, it is possible by late settlements one year that the advances both of the current year and of the subsequent year may be credited to the current year's receipts, thus swelling the receipts of that year by one-third of the revenue derivable, say, from country spirits. Between this extreme and that of the year which, by a similar mishap, is deprived of advance credits altogether, the results may oscillate. What is wanted for administrative purposes is a comparison between the revenue derived from the operations of one year and that of another year. To arrive at these results under the present system of accounts it is necessary to add to the actual realizations the advance, when that advance has already been paid and credited prior to 31st March, taking care to deduct as much of the following year's realizations as is

The Commissioners of Divisions were accordingly requested by the Board to furnish "revised figures for the general table showing the total excise revenue, as well as the revenue obtained from country spirits," on the principle above described. The Board explain that, "owing to want of time, it was not possible in dealing with the reports for 1884-85 to apply similar corrections to the remaining tables." Corrected figures have been furnished by the Commissioners, and the results are embodied in the following table supplied by the Board:—

DIVISIONS.	1883-84.	1884-85.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Burdwan	10,50,044	10,53,602	3,558
Presidency	25,92,717	27,92,558	1,99,841
Rajshahye	6,47,130	6,31,994	15,136
Dacca	7,01,038	7,36,109	35,071
Chittagong	3,00,687	2,98,313	2,374
Patna	27,64,548	25,67,027	1,97,521
Bhagulpore	11,81,432	11,58,151	23,281
Orissa	4,97,224	5,10,593	13,369
Chota Nagpore	6,28,979	6,90,851	38,128
Total	1,03,63,799	1,03,39,198	24,601

These figures show that there has been a net decrease of only Rs. 24,601 instead of the very large decrease of Rs. 3,74,203, as shown in the two preceding tables. The districts which show considerable decrease are Gya (Rs. 1,55,120), 24-Pergunnahs (Rs. 23,705), Hazareebagh (Rs. 22,084), Sarun (Rs. 17,486), Lohardugga (Rs. 13,313), Chumparun (Rs. 11,176), Burdwan (Rs. 10,487), and Moorshedabad (Rs. 9,906); while the most marked improvement occurred in Calcutta (Rs. 2,23,862), Durbhunga (Rs. 13,192), Dacca (Rs. 14,477), Midnapore (Rs. 13,531), Pooree (Rs. 13,003), Backergunge (Rs. 11,531), Nuddea (Rs. 9,797), and Mymensingh (Rs. 9,206). The incidence of revenue per 100 of population was highest in the Presidency (Rs. 33), Patna (Rs. 17), Burdwan (Rs. 14), Bhagulpore (Rs. 14), Orissa (Rs. 13), and Chota Nagpore (Rs. 13) Divisions; and lowest in the Rajshahye, Dacca, and Chittagong Divisions, where it amounted to Rs. 8.

3. The total number of shops licensed for the sale of *Country Spirits* was 4,424 against 4,614 in 1883-84: 479 were licensed under the sudder distillery system, and 3,945 were licensed under the outstill system, against 481 and 4,133 respectively in the previous year. The revenue according to actual realizations, as exhibited in the second table in the preceding paragraph, shows a decrease of Rs. 3,67,520, but, as already explained, these figures do not correctly represent the results of the excise administration. If the advance payments are adjusted, the proper amount of decrease is only Rs. 1,12,991 compared with the actuals of the previous year. The heaviest falling off occurred in Gya (Rs. 1,52,058), Patna (Rs. 31,645), Sarun (Rs. 30,635), Hazaribagh (Rs. 21,299), and 24-Pergunnahs (Rs. 23,237); and the largest increases in Calcutta (Rs. 1,28,114), Durbhunga (Rs. 19,920), Mozufferpore (Rs. 12,281), and Nuddea (Rs. 9,672). The Board attribute the large decrease in Gya, Patna, and Sarun to "inconsiderate measures taken for reducing the number of shops." In Hazaribagh the decrease is ascribed to poor crops and high prices of food-grains, and in the 24-Pergunnahs to the abolition of all country spirit shops within the cantonment limits of Barrackpore and Dum-Dum. The large increase in Calcutta is not real. Fresh settlements for the three years 1884-85 to 1886-87 were made in March 1884, and the two months advance fees have been credited to the year 1884-85; whereas the advance fees paid in March 1881 at the last triennial settlements were credited to the year 1880-81. The increase in Nuddea is attributed to the improved condition of the lower classes of the people, who are the principal consumers of spirits, while the increase in Mozufferpore and Durbhunga is unexplained.

4. The receipts under the head of *Rum* fell from Rs. 1,14,576 in 1883-84 to Rs. 98,707 in the year under review, the number of wholesale licences being

23 against 24, and of retail licenses being 93 against 103 in the previous year. The total quantity of rum of local manufacture passed for consumption was 10,314 against 13,882 gallons. The falling off in receipts is due to the displacement of this liquor, not only by the Shahjehanpore rum, but by rum from coast ports—Hong-Kong, Penang, and Singapore—as well as to importations of cheap brandies from foreign countries.

5. The revenue from imported *Spirits* and *Wines*, which is represented by license fees, rose from Rs. 2,00,795 to Rs. 2,28,218, notwithstanding the fact that there was a decrease of 35 in the number of licenses granted during the year. The more extensive use of imported liquor by the higher classes of natives is said to be the cause of the increase in the receipts.

6. There was a decrease of 320 and 227 in the number of licenses for the sale of fermented and unfermented *Turi* respectively. The revenue, however, shows a net increase of Rs. 10,672, which occurred chiefly in Hooghly and the 24-Pergunnahs. The increase in Hooghly is said to be due to the settlement of shops in groups, and in the 24-Pergunnahs to high prices which led the lower classes to have resort to *turi* instead of country spirits.

7. *Puchwai* was sold in 28 districts against 26 in the previous year. The number of licenses fell from 2,259 to 2,168, the revenue realized being Rs. 1,58,820 against Rs. 1,83,054. By far the largest decrease occurred in Burdwan (Rs. 10,722), and is ascribed to failure of crops, which raised the price of rice, the raw material of puchwai.

8. The extent of *Ganja* cultivation depends chiefly on the profit which the crop yields from year to year. Thus the crop of 1883-84 yielded a good outturn, which caused a fall in the prices, and this led to a decrease in the area under cultivation during the year under review. The crop was, moreover, injuriously affected by deficient rainfall in November and December, the outturn being 7,076 maunds against 8,982 maunds in the previous year. The wholesale price of flat ganja ranged between Rs. 6 and Rs. 35 against Rs. 10 and Rs. 25, and that of round ganja between Rs. 8 and Rs. 40 against Rs. 12 and Rs. 35. There was a decrease in the number of shops from 3,298 to 3,196, in the quantity consumed from 5,881 maunds to 5,798 maunds, and in the revenue from duty from Rs. 11,28,937 to Rs. 11,25,183; while the receipts from license fees rose from Rs. 8,44,775 to Rs. 8,62,417.

9. The number of licenses issued for the sale of excise *Opium* shows a decrease of 83 as compared with the figures of the previous year. There was likewise a decrease of 42 maunds in consumption, and a decrease of Rs. 21,549 in the revenue realized. The receipts from license fees increased by Rs. 10,606; while the receipts from the sale proceeds of opium decreased by Rs. 32,155. By far the largest decrease in revenue occurred in Calcutta (Rs. 14,566), Rungpore (Rs. 7,324), and Hooghly (Rs. 4,581). The stoppage of the surreptitious export of *Chundu*, which is a preparation of opium, contributed to the decrease in revenue under the head of duty in Calcutta; while the decrease in Rungpore is ascribed to the reduced number of shops and the non-settlement of some shops proposed for the current year. In Hooghly the decrease in revenue followed an apparent diminution in consumption; but a large quantity of contraband opium is believed to have been consumed in the district, where smuggling is carried on to a considerable extent. There is also reason to believe that the activity shown last year for the suppression of the use of contraband opium in the Patna Division was not maintained in the year under review. The Lieutenant-Governor must beg the special attention of the Board to this subject.

10. An important seizure was made by the police in Serampore, in which over 12 seers of contraband opium were confiscated. The smuggler was an old offender, who had been punished in 1882. He has again been convicted and punished with imprisonment and fine. Another seizure was also made by the police in Calcutta, in which about two maunds of opium have been confiscated. The smugglers have been arrested and punished.

11. The number of arrests made under the penal provisions of the Excise laws during the year was 4,228 against 4,092 in 1883-84. Of the persons arrested, 3,721 were other than licensed vendors, and 507 were

and of these the police are credited with 2,597 against 2,187, and excise officers with 979 against 821. On the whole, the returns show increased activity on the part of both police and excise officers in the detection of breaches of the law. The failure of the police in detecting excise cases in Tipperah is prominently brought to notice by the Board, and the attention of the District Superintendent has been drawn to this matter. The fines imposed during the year amounted to Rs. 44,288, of which only Rs. 35,406 were realized. Of this amount Rs. 30,736 were distributed as ordinary, and Rs. 1,862 as special, rewards. The rewards do not appear everywhere to have been promptly distributed, and this was notably the case in Gya, Mozufferpore, Chumparun, Pooree, Hazarcebagh, Lohardugga, and Manbhoom. No reason has been assigned for the non-payment of the rewards in these districts, and the Lieutenant-Governor must request the Board to call for an explanation from the local officers on the subject. A reward in such cases loses its efficacy if it is long delayed.

12. The names of the officers selected by the Board for special mention will be noted in the Appointment Department. The thanks of the Lieutenant-Governor are again due to the Board for their successful administration of the Excise Department during the year.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 7th November 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, Nov. 7 '85	0.08	Weather—warm and cloudy. Prospects of <i>amun</i> rice good. Price of rice 11½ to 16½ seers per rupee.
	2 Bankoora, " 7 "	0.05	Weather—cloudy and rather warm for the time of year. Sowings of winter crops continue, and those sown early germinating well. Slight rain fell during the week and this morning (7th). Prospects on the whole very good. Health good.
	3 Beerbhoom, " 7 "	Nil	Weather—fine. <i>Lus</i> crop being cut. Both <i>aus</i> and <i>amun</i> crop will give a good outturn. Prices falling a little. Public health satisfactory.
	4 Midnapore, " 7 "	Nil	Weather—seasonable. Prospects of rice crop very good except in flooded tracts. <i>Boro</i> paddy cultivation proceeding in flooded tract in Ghatul sub-division. Prospects of <i>rubbee</i> crop good where grown. Public health normal.
	5 Hooghly, " 7 "	Nil	Weather—cloudy and cold. Rice crop excellent in all parts of the district not damaged by floods. Cultivation of <i>rubbee</i> and <i>boro</i> paddy has commenced. Prices stationary. Public health fair, but fever prevails in some parts.
	Howrah, " 9 "	0.07	Weather—sultry, but cooler at night. Prospects of crops favourable where not destroyed by floods.
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Pergha, Nov. 9 '85	Nil	Weather—hot for the season, and cloudy in the morning and evening. Prospects of <i>amun</i> crops good. Cold-weather crops doing well. Public health good.
	7 Nuddea, " 7 "	Nil	Weather—variable and cloudy. Temperature continues high. The <i>amun</i> saved from the floods very good. Sowings of <i>rubbee</i> continue on an extensive scale. Health good.
	8 Khoolna, " 7 "	Nil	Weather—bright, but cloudy at close of week. Prospects of rice crop continue very favourable. Ploughing for cold-weather crops going on. Fever in some places, public health otherwise good.
	9 Jessore, " 7 "	0.05	Weather—seasonable. Prospects of <i>amun</i> crop good. Sowings of winter crops going on. Price of rice stationary. Cases of fever here and there.
	10 Moorshedabad, " 7 "	Nil	Weather—clear and cool early in the week; cloudy and close again now. A little rain would be of great benefit to the <i>amun</i> in the <i>Bark</i> ; nevertheless a good crop is expected. <i>Kalai</i> is doing well. <i>Rubbee</i> crops generally still being sown. Mulberry doing fairly well. Public health good. Common rice sells at 15 and 16 seers per rupee.
RAJSHAHY DIV.	11 Dinagepore,	Report not received.
	12 Rajshahye, Nov. 7 "	Nil	Weather—hotter than usual for time of year and cloudy. Looks like rain. Prospects of standing crops fair. Preparation of lands for mustard and other cold-weather crops continues. <i>Ganja</i> is so far doing well. Fever general.
	13 Rungpore, " 7 "	Nil	Weather—seasonable. Prospects of <i>amun</i> and other standing crops good. Mustard and other winter crops are being sown. General health of the people good.
	14 Bogra, " 7 "	Nil	Weather—dry and hot again. Prospects of <i>amun</i> continue excellent. Public health fair.
	15 Pubna, " 7 "	Nil	Weather—seasonable. Prospects of crops continue good. Public health fair.
	16 Darjeeling, " 7 "	0.05	Weather—cloudy and raw. Prospects of crops good. Public health good.
	17 Julpigoree, " 7 "	Nil	Cold weather setting in, but sun still hot. Condition of all crops continue to be good. Fever prevalent as usual at this time of year; otherwise public health good.
<i>Eastern Districts.</i>			
DACCA DIV.	18 Dacca, Nov. 7 '85	Nil	Weather—seasonable. Sowing of mustard and <i>kalai</i> commenced. Prospects crops continue favourable. Public health good.
	19 Furreedpore, " 7 "	Nil	Weather—warmer than last week, with some clouds. <i>Digha</i> paddy be resped. Sowing of winter crops commenced. A good deal of fever at h quarters.
	20 Backergunge,	Report not received.
	21 Mymensingh, " 6 "	Nil	Weather—cloudy and close. Prospects of all crops good.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and progress of the crops, and state of health at date.
NGAL.—<i>conold.</i>			
<i>Eastern District—contd.</i>			
23	Chittagong Nov. 10 '85	Nil	Weather—seasonable Prospects of crops generally fair. Prices steady. Public health good. Cattle-disease reported.
23	Noakholy, " 6 "	Nil	Weather—cool and clear till 3rd, since when cloudy sky and warm. Prospects continue fair. Damage by grubs in the Fenny sub-division is said to be about 2 annas. Some damage also reported on the churs in the Sudder sub-division from same cause. Health good.
24	Tipperah, " 5 "	Nil	Weather—cloudy and unseasonably warm. Paddy continues to promise well, but rain is now wanted to ensure good results. Public health good, but sporadic cholera reported in the north of the district.
25	Chittagong Hill Tracts, " 8 "	Nil	Weather—hot with foggy mornings. Harvesting of <i>joom</i> paddy nearly over. Lands being prepared for chillies, mustard, and other cold-weather crops. Cotton is in pods in some <i>jooms</i> . Sugarcane doing well.
	Hill Tipperah, " 4 "	Nil	Weather—unsettled; cloudy. Prospects of <i>amun</i> paddy continue to be good. Cotton and <i>tii</i> being gathered. Chillies and tobacco being transplanted. Public health good.
BRHAK.			
26	Patna, Nov. 7 '85	Nil	Weather—cloudy and warm during early part of the week, but now clear, and mornings and evenings cool. Paddy on high lands suffering from want of rain. Rain also needed for <i>rubbee</i> sowings. Sporadic cholera reported from Dinapore. Fever prevalent in some parts of the district.
27	Gya, " 7 "	Nil	Weather—fairly cool. No rain reported from any part of the district. <i>Rubbee</i> sowings delayed for want of rain. Rice crops already damaged by the drought of the past five weeks would not be benefited by rain. Sugarcane being cut; outturn good.
28	Shahabad, " 7 "	Nil	Weather—seasonable Prospects of rice crop continue favourable, but more rain is wanted. <i>Rubbee</i> sowings for the most part completed. Weather favourable for poppy; sowings in full progress. Cholera and fever still prevalent. Prices stationary.
29	Durbhunga, " 8 "	Nil	Cold weather has now set in. Prospects of paddy generally favourable. A couple of inches of rain or so would have been greatly benefited in bringing crops to perfection. <i>Atua</i> and <i>soothni</i> are being harvested. <i>Rubbee</i> sowings in progress. Prices stationary. A few sporadic cases of cholera still reported from Madhubani.
30	Mozufferpore, " 7 "	Nil	Weather—seasonable. Paddy crop coming up favourably and promises well. <i>Rubbee</i> germinating well; sowings still going on. Public health fair in Sudder sub-division, but from Sitamarhi and Hajipur sub-division cholera reported.
31	Sarun, " 7 "	Nil	Weather—fair; days hot, nights cool. Prospects of <i>aghani</i> paddy good. <i>Rubbee</i> and poppy sowings in progress; early sowings coming on well. Cases of fever reported, otherwise public health good.
32	Chumparun " 7 "	Nil	Weather—seasonable. Standing crops looking well. <i>Rubbee</i> sowings in progress. Prices of food-grains have fallen slightly. Some cases of fever still reported from the interior.
BRAGULACH DIVA.			
33	Monghyr, Nov. 7 '85	Nil	Weather—fine. Prospects of crops continue good. A fall of rain would be beneficial. Prices steady. Public health good.
34	Bhagulpore, " 7 "	Nil	Weather—cloudy and warm. Prospects of rice still good, but the failure of the later rain will injure it a good deal. <i>Rubbee</i> sowings going on on a large scale. Rain wanted for this also. Prices stationary. Cholera still prevalent in the north.
35	Purneah " 7 "	Nil	Weather—seasonable. Prospects of crops good. Early rice sells at 20 annas per rupee. <i>Khesari</i> , <i>musuri</i> , wheat, &c, are being sown. Public health generally good except in some parts of Arraich, where cholera and fever still continue.
36	Maldah " 7 "	Nil	Weather—fine and cool. Prospects of all crops good. Common rice selling at 18 annas per rupee in most parts of district. Public health good.
37	Sonthal Pergba, " 7 "	Nil	Weather—seasonable. Prospects of rice crop excellent everywhere. Public health fair.
ORISSA.			
38	Cuttack Nov. 6 '85	1.42	Weather—cloudy. Early <i>sarad</i> rice flowering; late <i>sarad</i> rice in ear. Rain-fall of 3rd instant greatly benefited the crops. Common rice selling at 12 annas per rupee in town. Public health generally good. A few cases of cholera reported from Jajpur and some parts of Kendrapara sub-division.
39	Pooree, Khoorda " 5 "	2.90 1.52	Weather—cloudy with heavy showers of rain for the last two days of the week. Late <i>sarad</i> rice is in ear. <i>Laghu sarad</i> is being harvested. Rain of the week has caused damage to some extent to the mustard and other <i>rubbee</i> crops. Relief works are going on in the Chilka tracts which have suffered loss of crops from drought. Common rice sells at an average of 18 annas 6 chittacks per rupee in the Sudder sub-division, and 15 annas 6 chittacks in the Khoorda sub-division. Public health good.
40	Balasore, " 6 "	0.19	Weather—cloudy and cool. Early <i>sarad</i> rice ripening; late <i>sarad</i> in ear. <i>Rubbee</i> crops progressing well. A few cases of cholera reported from the Dhamnagar Chakla. Public health generally good.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hasaribagh, Nov. 6 '85	Nil	Weather—somewhat unsettled; unseasonably warm latterly. Prospects of rice and other crops continue favourable. Rice being harvested in places. General health good. A few cases of cholera reported.
42	Lohardugga, „ 7 „	Nil	Weather—cool and cloudy. Prospects of winter rice continue favourable. <i>Rubbers</i> sowings still going on. Prices steady. Fever reported from Daltongunge; otherwise public health good.
43	Singbhoom, „ 6 „	0.29	Weather—cloudy with light rain; clear to-day (6th). Prospects of crops continue good. Harvesting of paddy going on with an outturn of 12 to 16 annas. Cold-weather crops doing well. General health good.
44	Manbhoom, „ 7 „	0.11	Weather—warm and cloudy. Cutting of <i>amms</i> has commenced; the crop is a bumper one. Rice selling in different parts of the district at from 20 to 28 seers per rupee. Cold-weather crops doing well. Public health good.

Published for general information.

ALEXANDER PEDLER,

Offg. Meteorological Reporter to the Govt. of Bengal.

METEOROLOGICAL AND RAINFALL SUMMARY OF THE PROVINCE OF BENGAL FOR THE MONTH OF OCTOBER 1885.

OCTOBER is the month in which the south-west monsoon, which has been blowing since the commencement of June, practically ceases, and its place is taken by the north-east monsoon, which slowly and very gradually establishes itself over the province. The greater part of the month thus shows distinct transition conditions, and in normal years, while at the commencement of the month a feeble south-west monsoon may be blowing over the province, during the middle of the month, these winds gradually retreat, and by the end of the month usually a feeble north-east monsoon establishes itself over the province.

The change of the one monsoon to the other is sometimes represented as a kind of struggle between the two opposing wind currents, and with the final triumph of the stronger of the two. This, however, appears to be an incorrect way of viewing the action, and it is clear that on the one hand by the gradual and steady effacement of the conditions which brought about the south-west monsoon, or in fact it might almost be said with the tendency to the reversal of these conditions which manifests itself in October, the south-west monsoon current necessarily becomes more and more feeble, or is subject to a kind of decay.

On the other hand, temperature usually commences to fall rather rapidly in Northern India, and the main effect of the decreasing temperature appears to be to produce a considerable amount of descending air motion and a rising barometer, which is followed by the setting in of northerly winds. As therefore the south-west monsoon winds gradually retreat southwards, they are followed up by the northerly wind current, but over the area of interaction between the two currents light variable winds and calms will prevail. The point of interaction retreats southwards in front of the southerly winds, and as Bengal is the area over which this interaction takes place during a great part of October, for a very considerable part of the month light airs and calms prevail.

The time and character of the retreat of the south-west monsoon current will almost certainly depend on the strength with which it has been blowing, and with a weak current it will probably retreat early and quickly, while with a comparatively strong current the monsoon will influence Bengal for a longer time, and rain will continue later than usual, and the retreat of the current will be slow over the Bay, and thus the north-east monsoon conditions will be rather later than usual in establishing themselves over the province. The rainfall due to the continuance of the south-west monsoon conditions over Bengal probably, in normal years, ceases about the end of the first week or ten days of October, though, even after this time, local rainfall may occur particularly near the sea coast, probably due to local sea winds or irregular local action. After this period any rainfall which may occur is almost always due to the action of cyclonic storms, which may be either small or of great magnitude. Such storms are apparently formed during the gradual retreat of the south-west monsoon, all the conditions in October being usually very favourable to the production of such storms, as pressure becomes nearly uniform round the Bay, winds are feeble, and rainfall is to a great extent absent from the land area. These storms when formed sometimes move in a northerly direction and pass over certain part of Bengal; while on the other hand such storms frequently move in a westerly direction and cross the Coromandel or Madras coast. The storms formed in October are generally considerably larger, more violent and generally more influential than the storms of the rainy season proper, and the conditions are more favourable to the formation of large rather than small storms, inasmuch as the storms have a longer time to generate and to intensify. It is of course in October that conditions are occasionally favourable to the formation of the extremely large and intense cyclones which only occur at intervals of several years. In the event of one of these cyclonic storms passing over a part of Bengal, then the districts in its path will receive excessive rainfall, and those which are simply affected by it only will receive correspondingly smaller amounts of rain. When also these cyclonic storms cross the west coast, they generally cause slightly disturbed weather conditions over a considerable part of Bengal, and these are frequently followed by light rain.

The rainfall of October is then due to two distinct causes, and as the second cause is from its nature an extremely variable and uncertain one, it will be seen that the average distribution of the rainfall in October must be more irregular than in the previous monsoon months, and also that in particular years the actual distribution of the rainfall may be of extremely capricious character. In the case too of the rainfall which is brought up by the continuance of the south-west monsoon conditions, as the period at which these conditions cease varies very considerably from year to year, so also not only will the distribution of the rainfall be irregular but also the total amount received will be very variable. The normal distribution of the rainfall is so irregular that it can only be briefly described with very approximate accuracy. It was thus described in the report for October 1884:—"The average rainfall in Behar (with the exception of the Purneah and North Bhagulpore districts) and Churia Nagp (excluding the districts bordering on South-West Bengal) varies from two and a half to four inches. The amount is least in the Gya district. It varies between four and six inches in the case of the previously excepted districts, the western districts of Orissa and the whole of Bengal, excluding the Julpigoree district and a narrow strip extending along the coast, and bounded on the north by a curved line running through Outtack, Jajpore."

Supplement to the Rai

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding

METEOROLOGICAL OFFICE, BENGAL,

The 10th September 1885.

Diamond Harbour, Port Canning, Chandpore and Chittagong. Over this long narrow area, the width of which varies from 20 to 60 miles, the average rainfall exceeds 6 inches. It is absolutely greatest at False Point, for which it is 11·4 inches."

Meteorological summary of the month.—The meteorological conditions which obtained over the province at the close of September were very nearly normal for the period. As is usually the case at the close of September and beginning of October, the south-west monsoon current blowing over Bengal commenced to slacken rapidly, rainfall began largely to diminish in quantity, while the area over which the rain was falling considerably decreased. On the 1st of October, however, pressure had fallen for two days in succession, and there were indications of the formation of a very feeble area of low pressure over parts of South Bengal, and these indications were rather more pronounced on the following day. Winds also showed a tendency to circulate cyclonically round the area of low pressure, and as the result of these slightly disturbed conditions, rain became decidedly general in all districts except Chutia Nagpur and parts of South Behar, the rain being heaviest in South-West Bengal. This slightly disturbed condition shortly disappeared, and for the next period of about eight or ten days the meteorological conditions were again those of the transition period above referred to. Winds were light and rather variable in direction, pressure was high, temperature began to fall, and the night temperatures in particular decreased rapidly. Humidity and cloud proportion became much smaller, and rain was practically absent in all the districts in the plains, except on the 9th instant, when owing to slightly disturbed conditions a few general showers again fell.

These transition conditions continued over Bengal up till about the 13th, when the weather in the southern districts became decidedly affected by the formation of a small cyclonic storm in the Bay, and its subsequent advance in a northerly direction. The small storm can be traced back probably as far as the 10th, when pressure was falling somewhat rapidly off Madras, and the wind directions along this coast showed a tendency to cyclonic circulation. The small depression was probably forming on this day, and its existence was shown by a fairly strong indraught at the entrance of the Bay, but at this time, and throughout the whole of its existence, the storm remained comparatively feeble. The disturbed conditions continued almost unaltered off Madras on the 11th, and then the storm apparently moved in a northerly direction almost parallel to the coast line, and on the 12th the centre was off Vizagapatam. The depression on this day had distinctly deepened, but the winds at the coast stations continued comparatively feeble. On the 13th, the small storm was nearly opposite to Gopalpore, and on this day it slightly intensified, and by the following morning (the 14th) it was to the east of False Point, and was still advancing in a north-easterly direction. As the storm was thus advancing near the Sandheads, at daylight on the 14th orders were issued to the stations in the Hooghly to hoist storm signal No. 7, indicating the probable passage of a small cyclonic storm in a northerly direction to the east of Saugor Island and to the west of Chittagong, and from reports subsequently received, it would appear that very bad weather prevailed at the Sandheads on this day, but the wind velocities at the coast stations continued comparatively small. The small storm continued its north-easterly advance, but pressure commenced to rise rapidly, and in its approach towards the land the depression began to fill up, and by the 15th it had become a shallow depression only, attended with light winds, and it was passing over the land area between Saugor Island and Chittagong. On this day, therefore, at about midday, the storm signals were lowered.

Winds, however, still continued to circulate cyclonically round the head of the Bay, even after the barometric depression over the land had disappeared. A peculiar feature of this storm was the extreme slowness of its movement, and the comparative lightness of the winds at the coast stations. Over the sea area, however, probably winds were strong, and, judging from the movements of the upper strata of the atmosphere, the indraught towards the centre of the storm was rather intense. Another point in connection with the storm was the comparative absence of heavy rain, and it would appear from theory that this is precisely what might be expected in a storm like that above described. On the 16th instant, these disturbed conditions had almost entirely passed away, and weather was fine all over Bengal, and also apparently over the whole Bay.

During the continuance of the above conditions and the advance of the storm, weather in Orissa, South-West and East Bengal also became disturbed, and light rain showers became comparatively frequent in these districts; but in Chutia Nagpur, North and South Behar and North Bengal, which were practically not under the influence of these disturbed conditions, weather was fine and rainfall was practically absent.

On the 17th instant, however, pressure began to fall rapidly near the Pegu coast, and strong winds commenced to blow at the stations in the south of the Bay. At the same time winds at the stations round the Bengal coast showed distinct indraught towards the Bay. On the following day pressure commenced to rise at the eastern stations of the Bay and to fall at the western stations, and strong winds continued to blow at Diamond Island and in the south of the Bay. On the 19th, pressure again rose at the stations in the north and east of the Bay, and it was falling at the central stations on the west coast; strong winds were still blowing in the east and south, and there was a distinct cyclonic circulation over a large part of the Bay, so that on this day the indications clearly pointed either to the

formation of a small cyclonic storm in the centre of the Bay, or to the first advance of the monsoon towards the west coast. During the whole of this period, weather in Bengal was almost uniformly fine, and with the exception of light showers in Orissa and in the hills of North Bengal, the province was rainless. Winds were light and variable, and temperature was high in all districts.

On the 20th instant the conditions as above described, which existed in the centre of the Bay, became further developed, and it was clear that it was not a cyclonic storm, but simply a diffused depression, and that a burst of rainfall was advancing towards the coast of the Circars, and on the 20th and following two days rather heavy rain was reported on this and on the Ganjam coast, while lighter rain fell in connection with this disturbance over the whole of Orissa, Chutia Nagpur and South-West Bengal. At the same time the disturbed conditions advanced apparently in a northerly direction, and in addition to giving general rain in the last-named districts, they became more diffused and gave light rain over East Bengal and North Bengal and over parts of South Behar.

With the gradual advance of this diffused depression over Bengal skies of course clouded over, humidity increased very rapidly, temperature, and particularly the night or minimum temperature, increased quickly, and the south-west monsoon conditions in a feeble form again established themselves temporarily over a large part of the province. The burst of rainfall along the west coast can scarcely be considered a true commencement of the Madras rains, but rather as a feeble, diffused and preliminary action, which might under other circumstances have generated a rather severe storm. As it was, there were decidedly disturbed conditions which existed along the whole west coast and extended far into Bengal, the centre of greatest barometric depression, (which was, however, particularly shallow,) being about Vizagapatam, while the centre of heaviest rainfall was at Coconada, which received nearly eleven inches of rain in two days, while Gopalpore also received nearly five inches, and on the 21st alone Vizagapatam registered 2.50 inches. During the formation of the depression, and owing to the indraught towards it, up to the 20th, rainfall was practically absent over Bengal, but from that date up till the 24th or 25th rainfall was fairly general in all districts except Behar, though a few showers penetrated even as far as this district. The rainfall due to this depression of course was most general and heaviest and lasted over the largest period in Orissa, though East Bengal also received some heavy showers.

From the 25th up to the close of the month conditions became almost wholly those of the north-east monsoon, skies became almost cloudless, winds were northerly and north-westerly, humidity rapidly decreased and became very low, temperature reduced very rapidly, and so rapid was the reduction of the night temperatures that at some station a difference of nearly 10° was recorded between two consecutive nights, and lastly rainfall was almost entirely absent, the only rain reported during the last four days of the month being a slight shower at Darjeeling. At the close of the month, too, the cold weather conditions in Bengal were being strengthened and intensified by the setting in of the Madras rains, the indraught towards which of course caused a steady northerly current to flow over Bengal.

The variations of pressure from the normal during the month have not been of any great importance, and except where the conditions were influenced by the formation of the two depressions above alluded to, the variations were only of slight oscillatory character. The variation of the mean pressure of the month from the normal is comparatively small, being an excess of only 0.024". Except at Gya, where pressure has been in very slight defect, and at Saugor Island, where the excess pressure is less than one-hundredth of an inch the distribution of the excess pressure is fairly regular, though the district which shows the largest excess is East Bengal, where it amounts to 0.04".

Temperature variations usually in October are very considerable, and generally there is a steady decrease throughout the month. This year, however, the temperature instead of steadily falling during the whole month has presented two periods in which it fell with extreme rapidity, and two other periods in which temperature, instead of falling in most cases, increased perceptibly. The beginning of the month, as described under the meteorological summary, was a period of rapid reduction of temperature. This was followed by the formation of the cyclonic storm off the Madras coast, and its advance in a northerly direction up to the head of the Bay. Owing to the cloudy, rainy weather, and the setting in of moist winds which followed, the reduction of the temperature entirely ceased. After the disappearance of this storm, which was followed by a few days fine weather, night temperatures again began to fall, but with the setting in of moist sea winds which accompanied the westward advance of the second diffused depression, again the fall of temperature ceased. During the last five or six days of the month, as described under the meteorological summary, the fall of temperature was again very rapid. For the whole month temperature has been in all districts above the normal, the average excess temperature over the whole province has been about 1.2° , but the excess has been mainly confined to Behar, Chutia Nagpur and Orissa, where the excess approached 2° , while in East and South-West Bengal the mean temperature has been nearly normal.

The south-west monsoon current, as above stated, became extremely feeble from the very commencement of October, and thus the rainfall from this cause was smaller than usual. The two depressions which have been formed in the Bay also have not travelled into Bengal, but

have only generally influenced the weather in the province, and have therefore only brought up comparatively small amounts of rain. The rainfall for the month has consequently been in defect in all districts, and as neither of the above unsettled conditions reached as far as Behar, the rainfall in this district in particular has been excessively scanty. The district which has received the largest amount of rain has been East Bengal, where the average fall has been 5·14 inches, while the normal for the month is 5·71 inches. The actual fall is therefore about 90 per cent. of the normal. South-West Bengal reports an average fall of 3·30 inches against a normal fall of 4·56 inches, and has thus received 72 per cent. of the normal. In Chutia Nagpur an average fall of 1·95 inches is reported against the normal 2·82 inches, which represents 69 per cent. of the normal, and in Orissa the actual fall has averaged 4·02 inches, while the normal is 6·32 inches, and the percentage received becomes 62. In the case of the other three districts very deficient falls have been recorded: thus North Bengal reports an average fall of 2·18 inches, while the normal fall is 5·30 inches, and thus the actual is only 41 per cent. of the normal. In South Behar 0·66 inch of rain is reported, the normal being 3·27 inches, and thus the actual is only 20 per cent. of the normal; and finally North Behar, during the whole month, has averaged only 0·45 inch of rain, while the normal fall is 3·63 inches, and therefore this district has received the extremely small proportion of 12 per cent. of the normal, or less than one-eighth of the normal quantity.

The distribution of rainfall in October is, however, as previously stated, decidedly irregular, and this year has been no exception to the rule. In the Orissa Division it is the Baasore district which is most largely in defect, and such stations as Bhuddruck and Jellasure have received less than one inch of rain during the month, while the normal at these stations is nearly five inches. In South-West Bengal which, as before stated, has on the whole received a decidedly defective fall, the district of Nudda has received a fall in excess of the normal, and the districts of Midnapur, Howrah, and Khoorna have only received about half the usual quantity. In the Bankoora district to, Anda, Gangajalhati and Sonamukhi have received almost no rain. In East Bengal, Noakhally has received a fall largely in excess of the normal, and Furreedpore and Mymensingh falls slightly in excess. In North Bengal the district of Julpigoree has received a fall in slight excess of the normal, but on the other hand Maldah and Dinagepore districts report falls less than a tenth of the normal, while in the former district Chanchal, Gajol and Sibgunge report absolutely no rain for the month. In North Behar all the districts are so largely in defect that it is scarcely possible to single out any one in preference to others; but in the Purneah district Gandwara reported no rain, in the Durbhuanga district Bahera received no rain, again Mozufferpore recorded no rain, while Gopalgunge in the Sarun district also received no rain. In South Behar the defective rainfall was least marked in the Sonthal Pergunnahs district while in the Shahabad and Gya districts most of the stations were rainless, and in South Behar generally the following stations reported no rain—Barrh, Jamui, Bhagulpore, Kolgong and Simra. In Chutia Nagpur, while the Lohardugga and Singhbhum districts have generally received good rain, and in some cases falls above the normal, in Manbhoom the fall is defective, but in this division the distribution is fairly regular, as every station has reported more or less rain.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of October in all districts of the Province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third column in a slightly different form. It states as a percentage how much the district rainfall of the month varied in excess or defect from the normal rainfall, and is hence the difference between the numbers in the third column and 100.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of October 1885.

	Inches.	Date.	Hour.
The mean pressure of the month	29.860		
The average pressure of October from 24 years' registers	29.832		
The highest pressure in the month	29.997	21st	10h.
The lowest pressure in the month	29.730	13th	16h.
The range of pressure	0.267		
The total number of hours of bright sunshine during the month	251.3		
The maximum possible number of hours of sunshine	359.1		
	°		
The mean temperature of the month	80.3		
The average temperature of October from 24 years' registers	81.5		
The highest temperature in the month	90.0	6th	
The lowest temperature in the month	64.7	29th & 31st	
The range of temperature during the month	25.3		
The mean daily range of temperature	12.1		
The greatest range of temperature in one day	19.5	29th	
	Per cent.		
The mean humidity of the month	84		
The average humidity of October from 24 years' registers	79		
	Inches		
The mean vapour tension of the month	0.866		
The average vapour tension of October from 9 years' registers	0.854		
The mean cloud proportion of the month	4.07		
The average cloud proportion of October from 8 years' registers	4.22		
	Inches.		
The total rainfall of the month	5.29		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	3.57		
The average fall of October from 48 years' registers	5.61		
The greatest fall in 24 hours	1.64	11th	
	Days.		
The number of rainy days in the month	8		
The average number of rainy days in October from 24 years' registers	10		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	145.6		
The mean difference of sun and air temperatures	58.6		
The greatest sun temperature	155.1	11th	
The greatest excess of sun over air temperature	66.9	11th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	69.6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	5.3		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	10.3	30th	
	Miles.		
The mean movement of the wind per day	75.4		
The greatest movement of the wind in one day	117.0	14th	
The greatest movement of the wind in one hour	15.0	1st	5 to 6 P.M.
The number of hours with winds from each of the 8 points—			

N. 126, NE. 42, E. 76, SE. 85, S. 72, SW. 107, W. 102, NW. 86, Calm 38.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of former years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.8 lower; and, finally, the thermometer, which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards, is found to read 0.6 higher than the New standard thermometer, which is the standard of reference at the present Observatory.

ALEXANDER PEDLER,

METEOROLOGICAL OFFICE. INDIA;

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 9th November 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 6TH OF NOVEMBER 1885.

At the close of the previous week the conditions in Bengal were typical of the north-east monsoon. Skies were practically cloudless, temperature was falling rapidly, humidity was low, and a steady northerly current was blowing over the greater part of the province. This northerly wind current had been rather intensified by the apparent setting in of the rains along the west coast of the Bay, all stations from Masulipatam down to Galle having received fairly heavy rain. The heavy rainfall along the Madras coast suddenly ceased at the commencement of the week under review. At the same time very strong winds continued to blow at Galle, showing that weather was unsettled in the south of the Bay, and on Monday, the 2nd of November, it became evident that a cyclonic storm was approaching the west coast, and that it would cross the Coromandel coast between Masulipatam and Madras. Pressure fell rapidly with the approach of the storm, the fall at Madras being about 0·2" in the 24 hours from the 1st to the 2nd of November. The small cyclonic storm apparently crossed the coast about midway between the above-named stations during the evening of the 2nd of November, and from the telegraphic reports received from Simla, it would appear that the storm marched across the entire peninsula without breaking up.

The storm was a large though not an intense one, and it affected the whole of the stations on the west coast, giving heavy rain to the central stations, and lighter rain to the others. Strong winds amounting to a fresh gale were also reported on the evening of the 2nd from the central stations.

Rain, therefore, was received at almost all stations in Orissa on the 3rd and 4th instant, the southern stations receiving heavy rain and the northern stations light rain. With the advance of this very large disturbance across the west coast, weather in Bengal also became unsettled; skies clouded over rapidly, and in the southern districts they became almost practically overcast for some days. Considerable amounts of moisture also drifted over the province, and humidity and temperature rapidly rose. The northerly winds rapidly fell off in force, and winds became very light and variable. These conditions continued over the southern districts of the province, and particularly in Orissa and South-West Bengal up to the close of the week, but skies had cleared and humidity and temperature were falling in Behar, and at the northern and eastern stations in Bengal. During the continuance of these disturbed conditions a few very light showers were reported in Chutia Nagpur, and also at two or three stations in South-West Bengal and at the stations in the Darjeeling Hills, but they were of no practical importance.

The pressure changes over the province have been generally small and unimportant during the week, and usually they have been more or less of an oscillatory character. The mean pressure for the week has been distinctly above the normal, the average variation over the whole province being an excess of about 0·05". The excess above the normal appears to have been smallest in Chutia Nagpur and South Behar, where it has been between 0·02" and 0·03". In Orissa the excess has been 0·04", in East and South-West Bengal it has been 0·05", and in North Behar about 0·07".

Temperature was, as stated previously, comparatively low at the commencement of the week, but with the advance of the disturbed conditions over the province, night or minimum temperatures rose rapidly. The day or maximum temperatures have been decidedly low during this period owing to the clouded skies which prevailed over a large part of the province, and this has very sensibly reduced the mean temperatures recorded during the week. Compared with normal temperature, all divisions, except Chutia Nagpur, have showed temperatures in defect, and in South-West Bengal and Orissa the mean defect was more than 2°.

Rainfall, as has before been stated, has been practically absent from all districts except Orissa. Behar, North and East Bengal have been absolutely rainless for the week; South-West Bengal has received an average fall of one-hundredth of an inch only, and Chutia Nagpur one of five-hundredths of an inch. Orissa, on the other hand, has received an average fall of 1·24 inches, but here the rainfall has been unevenly distributed, and thus while the Pooree district received 2·83 inches, the Cuttack district has received 1·04 inches and the Balasore district 0·31 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 6th of November 1885 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of October.		Since 15th May 1885.

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, S. G.'s Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ...

The total fall of rain from 1st to 7th November 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The total fall from 1st January to 7th November 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the barograph and thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

overcast, g gloomy, d drizzling rain, Δ dew.

ALEXANDER PEDLER,

For Meteorological Reporter to the Government of India.

Abstract of the results of the Thermometric Observations taken at the Meteorological Office, Chowringhee, in the month of October 1885.

			☉	Date.
The mean temperature during the month	81.2	
The highest temperature during the month	93.0	6th
The lowest temperature during the month	65.9	29th
The range of temperature during the month	27.1	
The mean daily range of temperature during the month	13.7	
The greatest range of temperature in one day during the month	20.5	29th
			°/°	
The mean humidity during the month	80	
			Inches.	
The mean vapour tension during the month857	
The total rainfall of the month	3.73	
The greatest fall in 24 hours	1.85	2nd
			Days.	
The number of rainy days in the month	9	

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 9th November 1885.

Results of the Thermometrical Observations taken at the Meteorological Office, Chowringhee, from 1st to 7th November 1885.

MONTHS.		TEMPERATURE.				Mean wet bulb.	HYGROMETRY.			Rain.

The mean temperature of the seven days	75.1
The extreme variation of temperature	24.3
The maximum temperature	87.0
			°/°
The mean relative humidity	78
			Inches.
The total fall of rain from 1st to 7th November 1885	0.04

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 9th November 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

DURING the week ending 24th October 1885, births and deaths were registered in the principal Municipalities in Bengal, at the rates, respectively, of 24·5 and 34·0 per 1,000 of population, against 23·4 and 33·8 per 1,000, respectively, during the preceding week ending 17th October, showing an improvement in the registration of births.

2. The highest birth and death-rates were returned by the following Municipalities:—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Darjiling	39·1	Gya	51·0
Bhagulpore	37·1	Utterpara	47·2
Gya	36·9	Patna	46·4
Naraingunge	33·2	Bhagulpore	46·2
Burdwan	32·0	Arrah	43·1
Arrah	31·2	Suburbs of Calcutta	41·2
Comillah	30·8	Hughli	38·9
Patna	30·4	Purneah	38·1
			Comillah	34·6
			Puri	33·6
			Serampore	33·4
			Monghyr	33·4
			Chupra	30·3

3. The casualty rates from the principal diseases mentioned in the table appended to this memoranda exhibit no noticeable differences in comparison with the results of the preceding week, thus:

			Ratio per mille during the weeks ending—	
			24th October 1885.	17th October 1885.
Cholera	1·6	1·3
Small-pox	·1	·03
Fever	16·2	17·0
Bowel-complaints	6·8	6·0
Injury	·4	·6
Other causes	8·9	8·8

4. Excluding small-pox and injury, the casualties from which were high nowhere, and cholera, which proved noticeably fatal only in the Arrah town, viz. at 16·8 per 1,000 of its population, the rest of the diseases caused the highest mortality in the following Municipalities:—

Fever.		Bowel-Complaints		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Purneah ...	38·1	Monghyr ...	12·6	Comillah ...	19·2
Arrah ...	25·1	Patna ...	11·0	Gya ...	17·1
Bhagulpore ...	24·4	Hughli ...	10·7	Puri ...	16·8
Gya ...	22·5			Serampore ...	13·7
Burdwan ...	21·4			Patna ...	13·0
Patna ...	21·1			Suburbs of Calcutta ...	11·8
				Bhagulpore ...	11·8
				Hughli ...	10·7

5. The mortality referable to Sex, Class and Age, stands as noted below:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males ...	35·0	Christians ...	21·7	Under 1 year	289·8
Females ...	32·9	Hindus ...	34·5	1 and under 5 years	52·6
Ratio of male deaths to every 100 female deaths ...	120	Mahomedans ...	33·4	5 " " 10 " "	18·6
		Other classes ...	36·4	10 " " 15 " "	15·4
				15 " " 20 " "	21·4
				20 " " 30 " "	19·4
				30 " " 40 " "	19·6
				40 " " 50 " "	27·6
				50 " " 60 " "	36·6
				60 years and upwards	80·1

R. LIDDERDALE, M.D., Deputy Surgeon-General,

The 9th November 1885.

Sanitary Commissioner for Bengal.

SUPPLEMENT TO THE CALCUTTA GAZETTE, NOVEMBER 11, 1885.

cases of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as repeated, above alluded to, cannot be enumerated as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE TRIBUTARY STATES OF ORISSA FOR THE YEAR 1884-85.

POLITICAL.

Calcutta, the 12th November 1885.

RESOLUTION.

READ—

The Annual Report on the Administration of the Tributary States of Orissa for the year 1884-85.

Read also—

The Reports for the years 1882-83 and 1883-84, and the orders of Government recorded thereon.

The only administrative change in the management of the Tributary States during the past year was caused by the death of the Rajah of Narsingpore, who was succeeded by his minor son. This State, therefore, together with those of Baramba, Dhenkenal, and Mohurbhunj, is now under direct management. Of the remaining 15 States, 13 are administered by their own Chiefs under the supervision of the Superintendent of the Tributary Mehals; and two—Angul and the Khond Mals—are Government estates.

2. Of the total yearly tribute of Rs. 33,249 payable to Government, the sum of Rs. 3,482 was paid in before the commencement of the year, and during it the entire balance was realized, together with Rs. 6,546 of the claim for the current year.

3. The rainfall during the year is reported to have been generally sufficient. In Pal Lehara, Dhenkenal, Angul, and Hindole, the rains commenced late, and the crops suffered somewhat in consequence. In Baramba and Nursingpore some damage was caused by floods. In Dhenkenal and Angul the rice was only an 8 to 12 annas crop owing to the late setting in of the monsoon, while the cold-weather crops were a total failure. The highest rainfall registered was 64 inches at Duspalla. The rainfall registered at Keonjhur was only 28½ inches, which is evidently incorrect. In his report for the year 1883-84, the Superintendent remarked on the inaccuracy of the registration in Keonjhur, and stated that the Maharajah would be asked to place the rainfall register in better hands. The change, if any has been made, has apparently failed to correct the evil. The Maharajah's attention should again be drawn to the subject with a view to such arrangements being made as will ensure at least approximately correct returns.

4. The general health of the people was good during the past year, though there was an outbreak of cholera in the Nilgiri and Khandpara States. There was also a slight epidemic of the disease in Runpore, Duspalla and Baramba, but not in any of the other States. Two first-class dispensaries exist—one at Mohurbhunj and the other at Dhenkenal—which are in charge of Assistant Surgeons. In eight other States there are dispensaries in charge of hospital assistants, and in a ninth, one of the same class is about to be opened. Some slight progress was made in vaccination. In Mohurbhunj 7,230 persons were vaccinated, and in Baramba, into which State vaccination was for the first time introduced, 1,801 operations were performed. In Pal Lehara, on an epidemic of small-pox breaking out, the Rajah had some persons inoculated: prior to this no one in that State had been either vaccinated or inoculated. In Dhenkenal 1,540 persons were vaccinated, but the work is said to proceed slowly in this State as the people, at the instigation of inoculators, oppose it. The Rajah of Talchere asked for a vaccinator and one was sent, but unfortunately the lymph was bad and the failure of most of the operations creating a bad impression the work had to be stopped. The Superintendent, however, states that a fresh attempt will be made during the current year with better lymph. This subject was specially referred to in the Resolution on the report of 1883-84. It is not necessary here to do more than again draw attention to the remarks there made. With the addition of Nursingpore, more than one-third of the Tributary States are now under direct management, and the time has therefore arrived for a real effort to be made to overcome the people's prejudice against vaccination, and so gradually to remove the superstitious notions that now prevail as to the cause of small-pox.

5. No improvements were made during the year in the general means of communication in the States. The Superintendent remarks that the two most important lines of communication from Cuttack to Sambulpore—one *via* Angul and the other along the course of the Mahanuddy—are below flood-level and unbridged, and are useless for more than half the year. He considers that no reasonable expenditure would make them available for traffic during the whole year. It appears, however, that a road could be constructed at a reasonable cost, which would run above the watershed of the country and be thus independent of the floods. The decision of the local Public Works Department, under whose consideration the matter is at present, should be reported to Government. The road will be a useful one, and the Lieutenant-Governor trusts that enquiry may show that its execution is practicable. The Rajah of Athgur has, it appears, at length consented to construct the portion of the Cuttack-Dhenkenal road which will lie within his State. It is to be regretted that he has shown hitherto so much opposition to a work from which his State will undoubtedly derive benefits, and the Lieutenant-Governor now hopes that nothing will be allowed to interfere with the fulfilment of his promise. The question of the road between Dhenkenal and Tangy is also one which should be taken up, and the Cuttack Road Cess Committee should give their best consideration to the proposal to construct the portion of it which lies within the Cuttack district. The slow progress in the material development of these Tributary States, which every annual report brings to notice, is due mainly to the want of roads and proper communications. It may be hoped that in the course of a few years railways will be established in the province. The surveys for some of

these have already been completed or are under prosecution, and it is of urgent importance that the roads which connect different parts of the country with the railway should be now taken in hand. The Lieutenant-Governor will hope to have the opportunity of discussing the question with the Commissioner on his approaching tour in Orissa, and it seems to him, if the imppecuniosity of the Chiefs stands in the way of road extensions, some plan might be devised by which, under a system of advances from Government, the work would be commenced and carried through.

6. The question regarding the status of the Tributary Mehals of Orissa, which arose in consequence of a decision of the High Court, that Mohurbhunj is not a part of British India, is one which has for some time been before Government. The Government of India finally decided that this ruling must be accepted as conclusive, and that no steps should be taken "in any way indicating a desire to claim Mohurbhunj as part of British India." The Government of India also held that it was not impossible that the principles which governed the Mohurbhunj case might be held applicable to the other Orissa States, and it was directed that the proceedings of this Government in regard to these States should be so regulated "as to avoid, as far as possible, the risk of the complications which might arise from a decision that the Mehals are not British territory." The Government of India reserved, however, "the fullest right to interfere to such extent as might seem fit for the purpose of securing the good administration of the Mehals, and, when necessary, of conferring upon their officers powers to be exercised within the Mehals." The Superintendent was, in consequence of this decision, asked to consider what arrangements should be made for the trial of cases in the Mehals. His reply has been received, and is now under the Lieutenant-Governor's consideration. With regard to Angul lists of the enactments which are, and which are not, in force in that Mehal were forwarded, prior to publication, for the sanction of the Government of India. A subsequent letter was, however, received from that Government on the subject, and after consulting the Legal Remembrancer and the Superintendent, the Lieutenant-Governor has decided that it is not necessary to publish any notification under section 3 of the Scheduled Districts Act, and information to this effect has been sent to the Government of India. The Superintendent remarks on the difficulties connected with the administration of justice in the Tributary States, and the doubts and uncertainties which exist. The Lieutenant-Governor is aware of the fact, but until orders are issued on the report of the Superintendent regarding the practice at present obtaining in the States, the procedure now in force should be maintained.

7. There was a large increase in the number of civil and revenue suits for disposal in the courts of original jurisdiction during the past year, of which no explanation has been given. The number of cases pending at the close of 1883-84 was 1,553, and to these must be added 2,681 cases of Nursingpore, which was brought under direct management during the year. The number of fresh cases instituted was 11,444 as compared with 6,774 in 1883-84. The total number of cases for disposal was thus 15,678 as compared with 8,136 in the preceding year. Of these 12,873 were disposed of, leaving 2,805 pending at the close of the year. The number of cases disposed of by tehsildars and managers was 12,599, and the number of pending cases on their files 2,496.

8. The number of criminal offences reported during the year was 1,725 as compared with 1,456 in 1883-84. Of these, 1,402 were returned as true. The number of persons concerned in criminal cases, who were under trial during the year, was 2,657, including 134 whose cases were pending from the previous year, the number in 1883-84 being 2,129. Of these, 1,413 were convicted, 1,102 were acquitted or discharged, 37 died, escaped, or were transferred, and 105 remained under trial at the close of the year. There was an increase, as compared with 1883-84 from 321 to 441 in the number of cases of theft returned as true, from 184 to 269 in cases of assault, and from 12 to 48 in the number of cases of criminal misappropriation; while, on the other hand, the number of cases of mischief decreased from 107 to 77.

9. The number of appeals in criminal cases was 159 as compared with 66 in the preceding year. Of these, the appeal was rejected in 11 cases, the sentence or order was confirmed in 121, reduced or altered in 7, reversed in 17, and 3 appeals were pending at the close of the year. There were 250

appeals in civil and revenue cases, including 20 miscellaneous appeals. Of these, the original orders were reversed in 29 cases only, and 35 appeals were pending at the close of the year.

10. The area of the reserved forests in Angul was not increased during the year, but after its close an additional block was added. Steps were taken with some success to prevent injury to these reserved forests from the firing of the jungles beyond the forest reserve to clear the land for *toyla* cultivation: in spite of the precautions taken considerable damage was caused to the forests by fires. The Superintendent being unable to visit the Khond Mals, the report which was promised regarding the steps to be taken for a partial forest conservancy has not been submitted. The Lieutenant-Governor trusts that the Superintendent may be able to submit it after his visit to the Mals during the ensuing cold weather. Regarding the States which are under the management of their Chiefs, the Superintendent remarks: "In the Native States there now appears to be some reaction. The forests of Ranpore, Nayagur, Khandpara, Athgur, and Boad have been either reserved or protected by their Chiefs, and the cutting of trees in Baramba and Nursingpore, which are under the management of this office, has for the present been absolutely prohibited. * * * In Athmullick, the Rajah himself looks after his forests. He cuts large timber trees on his own account and transports them to Cuttack for sale; the felling of sapplings or even of small timber trees is not permitted. Hindole was a few years ago almost denuded of valuable timber trees, but great care is now taken to allow the sapplings to grow." All this is satisfactory. It shows that some of the Chiefs are at length becoming aware of the value of their forests, and are making some efforts to put a stop to the wanton destruction which prevailed while indiscriminate felling was allowed. The Lieutenant-Governor regrets, however, to learn that the Rajah of Duspulla has let out on lease some of his best forests, and for a very inadequate consideration. The Superintendent should explain to him the folly of his action, if he has not already done so, in order that the Rajah may, if possible, be deterred from sacrificing such other portions of his forests as have not been alienated.

11. During the year three new post offices were opened, one of which is a Government post office, while the other two are maintained partly from the Gurjat post fund and partly by Government. Of the 18 offices which exist, three are Government post offices, nine are maintained entirely from the Gurjat post fund, four partly from the latter and partly by Government, and two, at Keonjhur and Bahalda, are private, and are supported by the Keonjhur and Mohurbhunj States, respectively. The contributions of the Chiefs to the Gurjat post fund had to be increased from Rs. 2,200 to Rs. 2,400 during the past year owing to the state of disrepair into which the office buildings and dak sheds had been allowed to fall, and to the want of proper arrangements for crossing the mails at the different ferries. These matters, which had hitherto been left to the Chiefs themselves, were accordingly taken charge of by the Postal Department, and some expenditure was necessarily incurred. There is little doubt, however, that as the postal system becomes more appreciated, the Chiefs will be relieved of all contributions to the fund. The Lieutenant-Governor notices that the balance due from the States of Boad, Khandpara, Nayagur, and Duspulla on this account are considerable. The Chiefs should be requested to liquidate them. The Chiefs were permitted to send official covers containing magisterial and police papers free of charge to the other Tributary Chiefs of Orissa from the 15th May last, whereas previously they could only send official covers free to the office of the Superintendent.

12. The number of schools at the close of the year was 1,151 as compared with 1,060 at the close of 1883-84, and the number of students increased from 13,667 to 14,836. The increase of 91 schools was due to an increase of 103 in the number of lower primary schools, of one in the number of private institutions, and of three in the number of girls' schools; while, on the other hand, there was a decrease of 16 in the number of upper primary schools. This decrease was due to the fact that, while there was an increase of four in the number of these schools in the other States, 20 out of 26 such schools in the Khond Mals, which had been erroneously entered as upper primary, were removed from that heading and entered as lower primary schools. The number of Government schools was seven, as in the preceding year. The number

of cess schools also remained at 26, but the primary fund schools decreased from 138 to 126, while the number of unaided schools increased from 889 to 992. The total expenditure during the past year was Rs 69,364, of which Government contributed Rs. 8,122, as compared with Rs. 60,029, expended in 1883-84, of which Rs. 7,589 was paid by Government. The inspecting agency, consisting of five Sub-Inspectors and six inspecting pundits, is stated to be insufficient, and proposals, which will give some increase in connection with a revision of the Dhenkenal and Mohurbhunj educational establishments, have been submitted to Government. When orders have been passed on the subject, the Superintendent is prepared to submit further proposals. Of 69 candidates who went up for the upper primary examination, 47 passed, while 187 out of 294 passed the lower scholarship examination.

13. Mr. Wyly, the Manager, was in charge of the Mohurbhunj State during the year, and performed his duties with judgment and ability. During the year Baboo Brindabun Chunder Bhunj, brother of the late Maharajah, again petitioned Government to be appointed Manager. This question had been thoroughly considered by the Lieutenant-Governor before Mr. Wyly was appointed, and the conclusion arrived at was that the Baboo was in no respect a suitable person for the charge. Several memorials have from time to time been presented by the Baboo and his mother against this decision. These were, after a full review of all the circumstances, dealt with in a Resolution dated 30th May last, in which Sir Rivers Thompson finally declined to make any change in the existing arrangements. It may be as well to mention that in Baboo Brindabun Chunder Bhunj's last memorials charges of various kinds were made against the officers connected with the administration, which were found on enquiry to be absolutely untenable. Some of the settlements made by the late Maharajah have expired, and during the past two years four pergunnahs were resettled at an increase of Rs. 20,634 in the rents. Three other pergunnahs remain to be resettled. The cost of the Settlement Department in the State during the past year was Rs. 4,709. The expenditure on public works during 1884-85 was Rs. 55,870. The current demand on account of land revenue for 1884-85 was Rs. 1,59,377 as compared with a current demand of Rs. 1,70,780 in 1883-84. The decrease is caused by the exclusion of part of the revenue from the Nayabasan zemindari in Midnapore, only Rs. 7,000 actually received from the Collector of Midnapore being shown, instead of the whole current demand. The total demand for 1884-85, including arrears, was Rs. 2,68,233 as compared with Rs. 3,32,099, the similar demand for 1883-84. The difference is due to the exclusion of the portion of the rent for Nayabasan, to the fact of the inclusion in the figures for 1883-84 of an item under the head "Extraordinary Miscellaneous Revenue" amounting to Rs. 29,110 on account of refund of salaries drawn in excess, which does not appear in the items of receipt for 1884-85, and, lastly, to the fact that in 1883-84 the arrear demands amounted to Rs. 1,00,866, while last year they only amounted to Rs. 73,701. It is very satisfactory that with a smaller demand the collections exceeded those of the preceding year, the collections being Rs. 1,86,358 and Rs. 1,82,505 respectively. Taking the receipts at Rs. 1,86,358 and the expenditure at Rs. 1,82,786, the balance in hand at the close of the year was Rs. 49,484 as compared with a balance of Rs. 45,912 at the close of the preceding year. The minor Chief resides with his tutor at Cuttack, and attends the Ravenshaw College there. The Lieutenant-Governor regrets to learn that the progress of the minor in school is not so good as it should be. The explanation which has been called for from Mr. Kiddell, the minor's private tutor, on this point will be considered at Cuttack. The Lieutenant-Governor is satisfied that the boy is by no means wanting in intelligence, and as he is decidedly stronger and in better health generally than he was a couple of years ago, there is no apparent reason for his not being able to do as well as other boys in his class.

14. In consequence of the turbulent state of the Nilgiri Mehal, Mr. Ricketts was, on the Rajah's special request for a European officer, appointed Manager in 1883-84. The Superintendent reports that peace and tranquillity have been restored, that the relations between the Rajah and the Manager appear friendly, and that no complaints are made against the present administration. This is satisfactory. The Rajah appears to have made over the management of the State to his Manager. The Superintendent observes that a balance

of about Rs. 8,000 is due to the Rajah on account of land revenue from persons who are resident in British India, but that he cannot recover the amount as "the decrees against them in the Rajah's Court cannot be enforced on the debtors for want of any procedure for the enforcement of decrees of Native Courts in British India." The subject will receive the consideration of Government. The Lieutenant-Governor hopes after the ensuing cold weather to receive the report regarding the contested claim to adoption between the nephew of the Rajah and the son of the late Chief of Mohurbhunj.

15. Koonjhur is next to Mohurbhunj the largest State in Orissa. It has an area of 3,000 square miles and frequent disputes regarding its boundaries have arisen during the year. A boundary dispute between the Keonjhur State and the zemindari mehal of Balasore assumed so serious a form that a party of police under an Inspector had to be stationed on the spot till the Superintendent arrived and settled the dispute. Two other disputes in the same State regarding the boundary with Singbhoom and with the Sukinda estate in Cuttack were settled during the year. It is not stated whether, during the past year, anything was done towards improving the internal communications. Much improvement in this respect cannot, of course, be expected, as, with a very extensive area, this State has an income of not more than a lakh of rupees.

16. The total demand in Dhenkanal for the past year, including arrears, was Rs. 99,251, out of which Rs. 90,624 was realized, Rs. 785 was remitted, and Rs. 7,842 was outstanding at the close of the year. A measurement which has been made shows that the area of land under cultivation amounts to 95,518 acres. The cost of settlement operations during the past year was Rs. 5,172, the total cost up to the end of the year from the commencement of operations extending over eight years being Rs. 45,007, while the increase in revenue up to the same time was Rs. 19,241. Since the close of the year, the Lieutenant-Governor has sanctioned experimentally for one year the opening of a new subdivision in the State, at the termination of which period a report on the working of the new arrangement will be submitted by the Superintendent. Vaccination was, the Superintendent reports, introduced systematically during the year, and two vaccinators were appointed. Vaccination is not yet appreciated by the people, and only 1,540 operations were performed during the year, out of which 1,266 were successful. The amount spent on public works during the year was Rs. 31,264, of which Rs. 23,453 was spent on original works, including roads, buildings, bridges, the construction of embankments, and the excavation of a tank. Since the close of the year the Lieutenant-Governor has received with much regret the intelligence of the death of the young Rajah, who was only in his 20th year. The event is all the more to be mourned because the young Chief gave promise of being a worthy successor to his father, whose enlightened policy was the cause of Dhenkanal being recognized as the most advanced of all the Tributary Mehals.

17. The agricultural class in Talchere is stated by the Superintendent to be the poorest that he has seen in the Gurjats. Their poverty is said to be due to their over-assessment in 1877. The settlement which was first made for seven years, and subsequently extended for a further period of 10 years, has yet some nine years to run. Under these circumstances it is reassuring to learn that the Rajah takes a personal interest in the administration of his State, "has seen the unreasonableness of the demand, and has in a praiseworthy manner revised and reduced the demand where it pressed heavily." The middle vernacular school at the head-quarters of the State is stated to be a very good school, and it is greatly to the credit of the Rajah that he entirely supports the institution at an annual cost of Rs. 417. The Rajah has also established a dispensary and is constructing roads. He also issued during the past year a report on the administration of his State, which he had published in the local press and circulated to other Chiefs. His example might advantageously be followed in the other States. The Lieutenant-Governor is glad to learn that the Rajah attends Court and decides cases regularly. The very marked improvements in this State are in a great measure attributable, in the first instance, to the Dewan, Baboo Jagabandhu Ghose.

18. When the Baramba State came under the direct management of the Superintendent, it was burdened with a debt of Rs. 28,000. The whole of this

has been paid off, and most of the debts which the people had to pay have been abolished. The total demand for the past year was Rs. 120,919 as compared with Rs. 29,960 for 1883-84; of this amount Rs. 24,599 was realized and Rs. 1,268 was remitted. The Rajah, who is not yet six years of age, has suffered in health apparently from the bad position of the house he inhabits with his mother. The Manager has been asked to select a better site for his residence.

19. The total revenue demand for Angul for the past year, excluding Rs. 11-8 remitted on account of lands relinquished, was Rs. 32,854 as compared with Rs. 32,984 in the preceding year. The sum of Rs. 4,830 had been paid in advance during 1883-84, and Rs. 28,507 was collected during the year, leaving a balance of only Rs. 17 at its close. There was a falling off in the number of schools and also of scholars, the number of schools decreasing from 144 in 1883-84 to 132 in the past year, and the number of scholars falling from 2,255 to 2,037. There has been a gradual increase in the number of patients treated at the dispensary since 1880-81, the number in that year being 1,791 and during 1884-85, 5,397. The Superintendent remarks that the supply of English medicines, and especially those for the treatment of fever, is insufficient for such a feverish place, and recommends a more liberal supply of medicines to the Angul dispensary as well as to that in the Khond Mals. This recommendation will be forwarded to the Medical Department of this Government for consideration. The construction of a pucca building for the dispensary at Angul has been sanctioned, but as no funds are available the work cannot be carried out at present.

20. The report regarding Pal Lohara is unsatisfactory. The Superintendent states that, with an annual income of a little over Rs. 15,000, the Rajah is in debt to the amount of Rs. 37,000; there is no administrative difficulty in the management of Pal Lohara, but the Rajah's administration is far from satisfactory. The Superintendent thinks that a dewan should be appointed, and that the Rajah should take no active part in the management of the State till the debts have been paid off. Mr. Metcalfe was unable to visit the State personally during the past year, but the Lieutenant-Governor hopes that he may be able to do so this cold weather. After his visit to the State, a report should be submitted to Government embodying such proposals for the better administration of the State and the liquidation of the debts as may seem advisable after a personal and local enquiry into the existing circumstances.

21. The Duspalla State was not visited either during 1883-84 or during the past year by the Superintendent. Mr. Metcalfe should, if possible, do so during the next camping season, as it is very undesirable to leave any State for any length of time without local supervision.

22. The total demand, including arrears and miscellaneous receipts for the past year in Nayagur was Rs. 47,629, out of which Rs. 41,808 were realized. The Rajah is reported to be expensive in his tastes, and to spend almost all his revenue on himself and very little for the public benefit. The Superintendent thinks that it may be necessary to appoint a dewan for this State also. The further communication on this subject is promised.

23. In Boad, in order to assist in the administration of justice in the interior, where there are no courts, it used, until recently, to be the custom to permit the sarbarakars, with the aid of punchayets, to try petty criminal cases, and to impose fines not exceeding Rs. 2. It is reported that these persons, probably from want of supervision, not only tried and disposed of cases which they should not have tried, but further that they imposed fines exceeding Rs. 2, and the Rajah has now abolished the system. It is further reported that it was the custom to allow the sarbarakars to retain half the fines. Such a procedure was most irregular and improper; for the judge, having a pecuniary interest in the result of the case he was trying, had this incentive not only to convict the accused, but to impose the heaviest possible fine. The Superintendent considers that some plan must be devised by which justice can be brought to the doors of the rough aborigines who reside at a distance from head-quarters, and who cannot be expected to bring all their cases before the courts there. The Lieutenant-Governor will be glad to receive definite proposals on the subject.

24. The Rajah of Ranpore vested his dewan during the year with powers similar to those of a Magistrate of the second class, a Munsif, and a Deputy Collector. This was done with the approval of the Superintendent. The Lieutenant-Governor must request that all questions of vesting subordinates may be submitted to Government, who will, if necessary, confer the powers; the chiefs should not be permitted to exercise their discretion in this matter.

25. Though only in charge as Superintendent for the last five months of the year, Mr. Metcalfe has submitted an excellent report, for which the Lieutenant-Governor desires to express his thanks. The remarks regarding the officers mentioned in paragraphs 234 to 244 have been noted by Sir Rivers Thompson, and will be recorded in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Chief Secy. to the Govt. of Bengal.

**RESOLUTION ON THE ADMINISTRATION REPORT OF THE
TRIBUTARY AND POLITICAL STATES OF CHOTA
NAGPORE FOR 1884-85.**

POLITICAL.

Calcutta, the 13th November 1885.

RESOLUTION.

AD—

The Administration Report of the Tributary and Political States of Chota Nagpore for 1884-85.

ad also—

The Reports for 1882-83 and 1883-84, and the orders of Government recorded thereon.

Mr. Hewitt, the late Commissioner of the Chota Nagpore Division, was in charge of the division for 10 months out of the year, and was after its close succeeded by Mr. C. C. Stevens, by whom the Annual Report has been submitted.

2. Mr. Hewitt passed a considerable part of the cold weather in the tributary Mehals. Entering Gangpore in the beginning of December, he was during his stay in it occupied for some time in settling a dispute which had been going on since 1865 about the Tetarkera taruf between the pindar of Nagra and two other persons. The cause of quarrel was at first a question of boundaries and the improper inclusion in the demarcation certain "tolas" which were claimed as separate villages. The Commissioner, in the presence of all the subordinate landholders and village headmen concerned in the dispute, made a full investigation and arrived at a decision which was subsequently confirmed by the Government. Mr. Hewitt subsequently visited Bonai and Jushpore; in the latter State he enquired into a statement made to Government by the Vaccination Department, that the Rajah obstructed vaccination. The Commissioner found that there was no ground whatever for such a charge; and that the Rajah had acted quite within his rights in resisting the claim for fees which the vaccinators demanded in excess of the regular authorized fee of two annas in each case. It has since been decided that an Inspector of Vaccination shall be appointed for the Jushpore and Gangpore States, each State contributing a moiety of his salary; and under such an arrangement there should be no more complaints of extortionate proceedings on the part of the subordinates of the Department. The next States visited were Sirgoojah and Oodeypore. In Oodeypore, Mr. Hewitt temporarily settled a dispute between the Rajah and his brother, Lal Dharam Singh; the dispute, however, broke out again, and has been referred to the Rajah of Sirgoojah, who is the head of the family, as it is one which involves the division of family property. The Commissioner during his tour in Sirgoojah enquired into an oldstanding quarrel which had revived between the Rajah of Korea and his Dewan. During the Rajah's minority, from 1869 to 1876, the State had been managed with excellent results by Deyo Singh. "During all these years," the Commissioner says, "there were no troubles in Korea." But with the Rajah's assumption of personal authority he wished to displace his Dewan in favour of alien advisers. Both in Colonel Dalton's time, and again in the past year, the Rajah's action has been the cause of serious trouble and confusion, and the Commissioner rightly insisted that the Rajah must get rid of the foreign advisers who were governing the State. Against these orders the Rajah appealed to Government, and requested confirmation of his order dismissing the Dewan. The Lieutenant-Governor, in refusing to comply with the Rajah's requests, addressed a serious warning to him regarding the condition of his State, which, from the Commissioner's report, will be rapidly ruined and the country depopulated under the Rajah's misrule. In the meantime the present Commissioner has been directed to visit the State during the ensuing cold weather with a view to the enforcement of salutary reforms. Kharsowan was also visited by Mr. Hewitt, and Seraikella by Lieutenant-Colonel Garbett, the

Deputy Commissioner of Singbhoom, who enquired into the condition of the people, the state of the crops, and inspected the Chyebassa-Purulia road which traverses this State. Arrangements also were made for the establishment of primary schools in several places. The young Chief of Seraikella was invested during the year with the insignia and title of Rajah of the State.

3. The rainfall was sufficient in most of the States, and in Sirgoojah, Oodeypore and Chang Bhakur, as well as in Seraikella and Kharsowan, the crops were all good. Excessive rain in Gangpore and Bonai reduced the outturn in those States to half that of an average year; while in Korea the crops suffered from want of rain. The general health of the people was good, though in Sirgoojah there were 391 deaths from cholera, as compared with 197 in the preceding year; the deaths from small-pox in this State fell, however, from 179 in 1883-84 to 99 during the past year. Cattle-disease prevailed in some of the States, the number of cattle dying in Sirgoojah alone being 23,499, as compared with 8,628 during 1883-84. The mortality amongst the cattle, and the injury to the crops in some of the States, affected the material condition of the people to some extent. The failure in the harvest was chiefly felt in Korea. The only opposition offered to vaccination in the mehals during the past year was in Bonai, where the Rajah admitted that he did not allow the vaccinators deputed to his State to work, because he had had two daughters married during the year. Mr. Hewitt told him he was quite wrong on grounds of mere suspicion in preventing them. In other States, particularly in Sirgoojah, Jushpore and Gangpore, vaccination operations were extensively and successfully carried on.

4. But little was done during the past year for the improvement of education in the States. The general complaint appears to be that the people themselves do not care to send their children to school. The best results were found in Seraikella, where the Rajah and the Babu of Icha, one of his subordinate zemindars, have been showing an intelligent interest in the subject, by frequently visiting existing schools, examining the pupils and distributing prizes. Both too have been liberal in their pecuniary contributions to the cause of education. If the action of the Rajah and the Babu of Icha was followed in some of the other States, the backwardness of education generally in the Tributary Mehals would cease to be an object of remark.

5. No new roads were constructed during the year, but the present lines of communication were kept in repair. Mr. Hewitt, when in Sirgoojah, discussed the question of a road in connection with the Bengal-Nagpore Railway. He left on record the following remarks with reference to the matter:—

“The general question discussed this year in Sirgoojah was that relating to the roads. The Rajah and zemindars all agreed to join and construct a series of roads along lines defined in their proceedings, all of which were to meet a centre Grand Trunk Road, beginning opposite Burghur on the banks of the Kunhar in Palamow, and going south-west towards Korba down the Matrauga Ghât. The road from Burghur to Garwa, through which almost all the Sirgoojah trade passes, will be made by the Lohardugga Road Committee, and I have written to the Commissioner of Chhattisgarh in the Central Provinces to ask whether he cannot arrange for making the road down the Matrauga Ghât to Korba. It is absolutely necessary that this road should be made if any of the Sirgoojah trade is to reach the Bengal-Nagpore Railway.”

The Lieutenant-Governor will await a further communication regarding the result of the reference made to the Commissioner of Chhattisgarh. In the Resolution on the Report for 1883-84, the Commissioner was asked for fuller information regarding the communications in the States, and for any suggestions he might have to make regarding improvements. Mr. Stevens remarks that Mr. Hewitt has left no notes on the subject of improvements, and that, as he himself has as yet no personal knowledge of the various States, he must defer his recommendations to a later period. The Lieutenant-Governor trusts that in the next report, when Mr. Stevens has gained some experience of the country, this important subject will receive his careful consideration. With the not distant prospect of railway extension through parts of the Division, the question of interior road connections becomes of paramount importance.

13 appeals from the decisions of the Chiefs, 8 were disposed of, the order being confirmed in 6 cases, and reversed in 2; the other 5 appeals were pending at the close of the year. The number of persons committed by the Chiefs for trial by the Court of Sessions was 22. Of these, 15 were convicted and 7 were acquitted.

7. The number of criminal cases instituted during the past year amounted to 638, as compared with 505 instituted during the preceding year. There was an increase of 42 in the number of cases of causing hurt, of 58 in the number of theft cases, and of 61 in the number of cases of house-breaking. There were, however, only two cases of murder, as compared with 12 in the preceding year; and under the head of culpable homicide, also, there was a slight decrease, there being only 8 cases, as compared with 10 in 1883-84. The total number of persons concerned in the criminal cases was 1,367, as compared with 905 during the preceding year. There were 295 persons fined during the year, the fines imposed amounting to Rs. 2,313, of which Rs. 1,967 were realized, as compared with 214 persons fined, fines to the amount of Rs. 2,088 imposed, and Rs. 1,724 realized during 1883-84. There were 136 prisoners in jail at the commencement of the year, as compared with 105 at the commencement of the preceding one; and 517 were admitted during the year, making a total of 653, as compared with a total of 382 during 1883-84. Of the total number, 448 were released, 3 died, 9 escaped, and 193 were in jail at the close of the year. It is satisfactory to observe that during the past year, with a jail population greater by nearly 75 per cent. than during the preceding year, the deaths fell from 5 to 3. The total number of accidental deaths was 346, as compared with 311 during 1883-84; of these, 137 were caused by snake-bite, 58 persons were killed by wild animals, 67 were drowned, the rest of the deaths were due to various other causes.

8. Including suits pending at the commencement of the year, there were 492 civil suits for disposal during 1884-85, as compared with 359 for disposal during 1883-84. Of these, 333 were disposed of during the year, and 159 were pending at its close. There were 28 execution cases pending on the 31st March 1884, and 90 were instituted during the year. Of these, 78 were disposed of, and 40 were pending at the end of the year. The amount of civil work in the Tributary States is not large, and is generally limited to petty land disputes and bond debts. The powers of the Chiefs are exercised under the appellate control of the Commissioner of the Division.

9. The report of the management of the Sirgooljah State by the Rajah is again favourable. The Chief continues to receive valuable assistance from his Dewan, Jaffir Ali Khan, and is said to be always "most anxious to do what is right." No disturbance by the Korwas has been mentioned, and the measures alluded to in the Resolution on the Report for 1883-84 appear to have had the anticipated effect of repressing the turbulence of this lawless clan.

10. The Rajahs of Oodeypore and Jushpore have both been commended for their management of their respective States during the past year, and it is also stated that the son of the latter Chief is "beginning to take an active share in business." The Lieutenant-Governor joins in the expression of the Commissioner's hope that he will prove a worthy successor to his father.

11. The Chief of Gangpore acted unwisely in allowing himself to be persuaded by a Sumbulpore Brahmin, whom he employed as a tutor for his son, to impose fees on suitors in civil cases, and to charge a percentage on tradesmen's profits. He also allowed the Brahmin to try civil suits. The Commissioner, however, pointed out to the Chief the impropriety of preventing the people in so poor a State as Gangpore from seeking justice except at a cost which was beyond their means, and that taxes on trades were illegal, and informed him that he had no power to depute the trial of civil suits to a subordinate. The Chief at once agreed to cease to realise the taxes, and to dispense with the services of the Brahmin. The ill-advice given to the Rajah is, as the Commissioner remarks, another instance of "the evil that is done by introducing unscrupulous outsiders in these States."

12. Sir Rivers Thompson is glad that the Superintendent should be able to report so well of the Chief of Seraikella, who only succeeded to the State on the death of his father during the year preceding that to which the report

relates. He has given practical evidence during his first year of administration of a wish to promote the welfare of his people. The late Commissioner, Mr. Hewitt, whose remarks are quoted by Mr. Stevens, speaks well also of the minor Chief of Kharsowan, whose state is for the time under a manager appointed by Government.

13. The tribute payable by the States amounted to Rs. 4,686, and the whole of this amount, as well as Rs. 533 due from Oodeypore on account of the previous year, was realized during the past year.

14. The administration of the different States, with the exception of Korea, has been satisfactory. During the ensuing cold season, Mr. Stevens will no doubt be able to visit most of the Tributary States and to form a personal acquaintance with their Chiefs. He will then be able to speak from his own experience and observation regarding many matters with reference to which he could, in the report under review, merely repeat what he had heard.

ORDER.—Ordered that a copy of the Resolution be forwarded to the Commissioner of Chôta Nagpore for information and guidance.

Ordered also that a copy of the Resolution, together with a copy of the Report, be forwarded to the Government of India in the Foreign Department.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Chief Secretary to the Government of Bengal.

SELECTION OF CANDIDATES FOR ADMISSION INTO THE STATUTORY CIVIL SERVICE.

RESOLUTION.

APPOINTMENT.

Dated Calcutta, the 14th November 1885.

READ—

Letter from the Secretary to the Government of India, Home Department, No. 1894, dated the 29th October 1885, calling for the submission, in due course, of the names of candidates for appointment under the Rules framed under 33 Vic., Cap. 3, Section 6.

The Government of India have intimated that the number of nominations of natives of India to offices ordinarily held by members of the Covenanted Civil Service, to be made in 1886 under the rules framed under the Statute 33 Vic., Cap. 3, Section 6, will probably be two for Bengal, and that the Governor-General in Council will be glad to receive, in due course, the names of three selected candidates for each of the said appointments arranged in order of merit.

2. The Government of India have allowed the Government of Bengal to choose its candidates in any manner that may appear to it desirable, special regard being paid (in the case of candidates whose merits and abilities have not been already proved by employment in the public service) to educational attainments and proficiency. It is left open to this Government to select candidates from the Uncovenanted Service or the learned professions, to institute a test of limited competition among nominated candidates, or to follow any other mode of selection that may be thought suitable.

3. The Lieutenant-Governor has, after full consideration, resolved to select out of the whole number of applicants ten for each appointment to be given, and to subject them to a competitive examination to be held in January next on dates to be hereafter notified, and on the conditions specified below. On the conclusion of the examination, Sir Rivers Thompson will submit, with his recommendations, the names, in order of merit, of the first six most successful candidates, from whom two will be finally selected by the Government of India.

4. For the purpose of conducting the proposed examination, a Committee will be appointed, consisting of the Director of Public Instruction, the

Secretary to the Board of Revenue, and the Legal Remembrancer. The examinations will extend over four days. On the first day an essay in English, on a subject to be prescribed hereafter, will be written by the candidates; on the second day a general paper of literary, historical, and philosophical questions will be set; on the third day there will be a general paper on mathematics and physical science; and the subjects of the fourth day's examination will be the Penal and Criminal Procedure Codes and Mr. Field's Introduction to the Bengal Regulations. The candidates allowed to appear at the examination will hereafter be informed by the Committee, which will be appointed as above indicated, of the place at which the examination will be held, and of any other circumstances necessary for their information.

5. The Lieutenant-Governor will make his selection of candidates for examination from (a) officers in the service of Government who have specially distinguished themselves; (b) persons who have taken the degree of B.A. at the Calcutta University, provided that such persons can produce certificates of their having a thorough practical knowledge of the English language, of their being physically fitted for the service of Government, of their being of good moral character, of active habits and able to ride; (c) persons of proved merit and ability in the practice of a learned profession. No candidate not in the service of Government, or who has not been at least five years engaged in the service of a learned profession, will be selected after he has attained the age of 25 years. Applications, which must be accompanied by the certificates above mentioned, and, when necessary, by certificates of age, should be made to the Under-Secretary in the Appointment Department by the 15th December next, after which date no applications will be received.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Chief Secretary to the Government of Bengal.

DISTRICT ROAD FUND.

PUBLIC WORKS DEPARTMENT—ROAD CESS.

Calcutta, the 10th November 1885.

No. 3792R.C.

READ—

Letter from the Accountant-General, Bengal, No. 439L.F., dated the 31st October 1885, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 30th June 1885.

RESOLUTION.

THE Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees for the third quarter of the cess year 1884-85 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this resolution, and of the abstract referred to, be forwarded to all Commissioners of Divisions, to all Superintending Engineers of Public Works Circles in Bengal, and to the Financial Department of this Government for information.

By order of the Lieutenant-Governor of Bengal,

D. B. HORN,

Under-Secy. to the Govt. of Bengal,

P. W. Dept.

E. T. ATKINSON,

Accountant-General, Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 14th November 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
1	Burdwan, Nov. 14 '85	Nil	Weather—seasonable. Prospects of <i>amun</i> continue good. Cultivation of <i>rubbee</i> crops and <i>boro</i> paddy continues. Public health fair. Price of rice 11 to 16½ seers per rupee.
2	Bankura, „ 14 „	0·04	Cold weather setting in, but midday sun still hot. Harvesting of <i>amun</i> paddy going on with an outturn of 12 to 16 annas. Condition of all other crops continues very favourable. Public health good.
3	Beerbhoom, „ 14 „	0·10	Weather—warm. <i>Amun</i> crop being harvested. Rain wanted for <i>amun</i> on high lands. Prices falling. Public health good.
4	Midnapore, „ 14 „	Nil	Weather—seasonable. Prospects of crops excellent except in flooded tracts. <i>Boro</i> paddy and <i>rubbee</i> crops being cultivated. Public health good.
5	Hooghly, „ 14 „	Nil	Weather—seasonable. Prospects of crops good everywhere except rice in inundated parts. Public health fair.
	Howrah, „ 16 „	Nil	Weather—sultry, but cooler in the morning and at night. Prospects of crops favourable where not destroyed by flood. Reaping of <i>amun</i> has commenced in some places.
<i>Central Districts.</i>			
6	24-Pergha, Nov. 17 '85	Nil	Weather—seasonable. Prospects of <i>amun</i> crops good except in inundated parts of district. <i>Rubbee</i> crops doing well. Public health generally good.
7	Nuddea, „ 14 „	Nil	Weather—seasonable. All crops promise well. <i>Rubbee</i> sowings unusually extensive. Public health good, but sporadic cholera reported from Kushtea.
8	Meherpore „ 14 „	0·05	Weather—clear. Prospects of <i>amun</i> good. Winter crops being sown. Some fever in Satkhira; in other places public health satisfactory.
9	Khoolna, „ 14 „	Nil	Weather—seasonable. Prospects of both <i>amun</i> and <i>rubbee</i> crops continue good. Harvesting of <i>chhotan amun</i> has commenced. Fever continues.
10	Jessore, „ 14 „	Nil	Weather—seasonable. More rain wanted for <i>amun</i> in the <i>Barak</i> , but on the whole there will be a good crop. <i>Kalai</i> doing extremely well. Sowing of other <i>rubbee</i> crops nearly finished. Sugarcane good. Public health generally good. Common rice 16 to 17 seers per rupee.
	Moorshedabad, „ 14 „	Nil	
<i>RAJSHAHY DIVN.</i>			
11	Dinapore, Nov. 13 '85	Nil	Weather—fair and cool. State and prospects of <i>amun</i> crop promising well. Rice selling at from 15 to 25 seers per rupee.
12	Rajshahye, „ 14 „	Nil	Weather—seasonable. Prospects of <i>amun</i> paddy good. Harvesting of <i>amun</i> has commenced, also cutting of sugarcane. Sowing of mustard and other cold-weather crops going on. Prices improved. Fever general.
13	Rungpore, „ 14 „	Nil	Weather—seasonable. Prospects of <i>amun</i> and other standing crops continue good. Potato and tobacco being sown. Land being prepared for sowing mustard. Fever excessively prevalent in the Sudder and Nilphamari sub-divisions.
14	Bogra, „ 14 „	Nil	Earthquakes and tremors have not quite ceased. Weather not at all cold yet. State and prospects of crops continue very good. Public health fair.
15	Pubna, „ 14 „	Nil	Weather—seasonable. Nights getting cold. Prospects of crops continue good. Fever and sporadic cholera about Serajunge.
16	Darjeeling, „ 14 „	Nil	Weather—bright and cold. State and prospects of crops good.
17	Julpigore, „ 14 „	Nil	Cold weather setting in; sun still very hot. Condition of all crops good. Fever and cattle-disease prevail in the Alipore sub-division; otherwise public health good.
<i>Eastern Districts.</i>			
<i>Dacca Division.</i>			
18	Dacca, Nov. 14 '85	Nil	Weather—seasonable. Sowing of winter crops going on. Prospects of crops good. Public health good.
19	Furzedpore, „ 14 „	Nil	Weather—seasonable. <i>Dhigla</i> paddy being reaped. Prospects of <i>amun</i> good. Cases of fever here and there.
20	Backergunge, „ 13 „	0·11	Weather—seasonable. Prospects of <i>amun</i> crop promising. General health poor, fever prevailing in several stations.
21	Mymensingh, „ 13 „	Nil	Weather—cool and bright. State of all crops good.

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—contd.			
<i>Eastern District—contd.</i>			
CHITTAGONG DIVN.	22 Chittagong Nov. 17 '85	Nil	Weather—seasonable. Prospects of crops generally fair. Public health good. Prices falling.
	23 Noakholly, Fenny „ 13 „	Nil	Weather—cloudy sky by day; clear and cold by night. About six annas of <i>raja shail</i> rice reaped on churs. Prospects good. Land being prepared for cold-weather crops. Price of rice stationary. Health good.
	24 Tipperah Chandpur „ 13 „	0.13 0.20	Bright, clear weather with hot sunshine and cool nights. <i>Amra</i> paddy beginning to ripen and continues to promise well. Prices stationary. Public health fairly good; but while there is a remarkable absence of epidemics, there is a good deal of fever prevalent.
	25 Chittagong Hill Tracts „ 10 „	Nil	Weather—occasionally cloudy; foggy mornings. Cotton being gathered. Rain wanted for <i>amra</i> paddy. Sugarcane doing well. Lands being prepared for mustard.
	Hill Tipperah „ 11 „	Nil	Weather—getting cold. <i>Amra</i> paddy doing well. Cotton and <i>til</i> still being gathered. Public health good.
BEHAR.			
PATNA DIVN.	26 Patna, Nov. 14 '85	Nil	Weather—clear; evenings and mornings cool. Paddy on high lands suffering from want of rain. Sowing of <i>rubbee</i> crops in progress but rain wanted in several places. Cotton and castor growing well. <i>Rahar</i> in flower in some places. Fever still prevalent in some parts of the district.
	27 Gya „ 14 „	Nil	Temperature still higher than usual at this season. Harvesting of portions of the rice crop has begun. <i>Rubbee</i> and poppy sowing going on. Health good. No change in prices.
	28 Shahabad „ 14 „	Nil	Weather—seasonable. Prospects of paddy continue favourable, but more rain wanted for a good harvest. <i>Rubbee</i> sowings progressing vigorously. Weather favourable for poppy; early sowings germinating freely, but for want of rain artificial irrigation has to be resorted to universally. Fever and cholera abating.
	29 Durbhanga „ 14 „	Nil	Weather—seasonable. Rolling off of rain has caused some injury to paddy in places; prospects, however, generally favourable. <i>Rubbee</i> sowings still going on; crops already sown coming on well. Price of rice fallen a little. A few sporadic cases of cholera still reported from Madhubani.
	30 Mozufferpore „ 14 „	Nil	Weather—fair. <i>Rubbee</i> sowings almost completed and the crop has germinated well in most places. Poppy sowings commenced. Prospects of rice promising. Public health fair generally. Cholera still reported from Siwanurhee.
	31 Saran „ 14 „	Nil	Weather—fine and clear; days warm, nights cool. Prospects of <i>aghani</i> paddy continue good. <i>Rubbee</i> and poppy sowings going on; early sowings promise well. Irrigation being resorted to where practicable. A shower of rain will be very beneficial. Prices fair. Cases of fever reported; public health otherwise good.
	32 Champaran „ 14 „	Nil	Weather—seasonable. Harvesting of <i>bhadai</i> crops completed. Prospects of <i>aghani</i> crops good. Prices of food grains steady. Public health fair.
BRABHUT DIVN.	33 Monghyr, Nov. 14 '85	Nil	Weather—seasonable. Prospects of standing crops continue good, but the failure of the later rain will injure the paddy on high lands. <i>Rubbee</i> sowings in progress. Prices stationary. Public health good.
	34 Bhagupore „ 14 „	Nil	Weather—cloudy and warm. Prospects of <i>aghani</i> crops fair; those on high lands suffering from want of water. <i>Rubbee</i> sowings going on, but rain wanted for them also. Cholera still prevails in the north. Prices steady.
	35 Purneah „ 14 „	Nil	Weather—rather warm for the season; cool in the morning. Prospects of crops good. New rice 20 seers per rupee. Fever less than in previous year. Some cholera in Arraerah and south of the district.
	36 Maldah „ 14 „	Nil	Weather—cool and fine. Prospects of all crops continue good. Sowing of cold-weather crops still going on. Coarse rice 17 to 21 seers per rupee. Public health good.
	37 Sonthal Pergah „ 14 „	Nil	Weather—seasonably cold and fine. Some damage to high land paddy for want of rain reported from Godda sub-division; otherwise prospects of rice crop good. Public health good.
ORISSA.			
ONASA DIVN.	38 Cuttack Nov. 13 '85	Nil	Weather—clear; nights cold. Early <i>sarad</i> rice being reaped with fair return. Late <i>sarad</i> flowering, and in some places in ear. Common rice 12 seers per rupee in town. Cholera has appeared in own and in some parts of Jajpore sub-division; otherwise public health good.
	39 Poonce, Khoorda „ 12 „	0.81 0.33	Weather—seasonable. Early <i>sarad</i> being harvested. Late <i>sarad</i> in ear. <i>Rubbee</i> sowing has begun. Relief works going on in the Chitka tracts which have suffered loss of crops from drought. Common rice sells at an average of 17 seers 6 chittacks per rupee in Suddr sub-division and 14 seers 5 chittacks in Khoorda sub-division. Cholera has appeared in town.
	40 Balasore „ 13 „	Nil	Weather—seasonable. Early <i>sarad</i> crops ripening and are being cut in some places. Late <i>sarad</i> crops in ear. <i>Rubbee</i> crops progressing well. A few cases of cholera reported from Dasmnagar Chakla. Public health generally good.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh. Nov. 13 '85	Nil	Weather—seasonable. Paddy being harvested with good outturn generally. Cold weather crops doing well. General health fair. A few cases of cholera still continue to be reported.
42	Lohardugga. „ 14 „	Nil	Weather—seasonable. Paddy being harvested. <i>Rubbers</i> sowing still continues. Prices steady. Sporadic cases of fever and small-pox reported; public health otherwise good.
43	Singbhoom, „ 13 „	Nil	Weather—seasonable. All crops doing well. Harvesting of paddy continues. General health good.
44	Manbhoom, „ 14 „	Nil	Weather—fine and cool. Paddy on high lands being reaped; outturn seems good everywhere. Cold weather crops coming on. Coarse rice (new) quoted this day (14th) in Purulia market at 24 seers per rupee.

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 17th November 1885.

A. P. MacDONNELL,
Secretary to the Govt. of Bengal.

The mean pressure of the seven days ... 29.944
The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29.951

The total number of hours of bright sunshine ... 68.6
The maximum possible number of hours of sunshine ... 77.6

The mean temperature of the seven days ... 72.7
The average temperature of the corresponding period for 24 years, S. G.'s Office ... 76.2
The extreme variation of temperature ... 21.4
The maximum temperature ... 83.6

The highest velocity of the wind in one hour ... 9 Miles.

The highest pressure of wind on one square foot ... Not measurable. lbs.

The mean relative humidity ... 77
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 74

The total fall of rain from 8th to 14th November 1885 ... Not measurable.
The average fall of the corresponding period for 24 years, S. G.'s Office ... 0.37
The total fall from 1st January to 14th November 1885 ... 65.81
The average fall of the corresponding period for 24 years, S. G.'s Office ... 65.11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.
The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o. overcast, d. drizzling rain, = fog, Δ dew.

The mean pressure of the seven days ... 29.944
The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29.951

The total number of hours of bright sunshine ... 68.6
The maximum possible number of hours of sunshine ... 77.6

The mean temperature of the seven days ... 72.7
The average temperature of the corresponding period for 24 years, S. G.'s Office ... 76.2
The extreme variation of temperature ... 21.4
The maximum temperature ... 83.6

The highest velocity of the wind in one hour ... 9 Miles.

The highest pressure of wind on one square foot ... Not measurable.

The mean relative humidity ... 77
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 74

The total fall of rain from 8th to 14th November 1885 ... Not measurable.
The average fall of the corresponding period for 24 years, S. G.'s Office.. 0.37
The total fall from 1st January to 14th November 1885 ... 65.81
The average fall of the corresponding period for 24 years, S. G.'s Office ... 65.11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.
The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

c. overcast, d. drizzling rain, = fog, Δ dew.

Meteorological Report of the Province of Bengal

"	12th	73.3	83.9	19.8	64.1	66.6	.555	61.9	69	"
"	13th	73.8	83.4	19.1	64.3	67.7	.598	64.0	72	"
"	14th	74.1	84.1	18.4	65.7	69.3	.638	65.9	72	"

The mean temperature of the seven days

The extreme variation of temperature

The maximum temperature

The mean relative humidity

The total fall of rain from 8th to 14th November 1885

The mean temperature and humidity are obtained by applying to the mean of the 10a, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE; INDIA,
Calcutta, the 16th November 1885.

HENRY. F. BLANFORD,
Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE birth and death returns of the principal Municipalities in Bengal furnish the following results for the week ending 31st October 1885:—

1. That births and deaths were registered in these Municipalities in the proportions per 1,000 of population of 27·3 and 37·0 respectively, as opposed to 24·5 and 34·0 per 1,000 respectively, in the preceding week ending 24th October, indicating a sensible advance in the registration of both events.

2. That the highest proportions of births and deaths were returned from the following Municipalities:—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Beaulah	49·9	Serampore	60·8
Naraingunge	49·7	Gya	60·8
Uttarpara	47·2	Arrah	59·8
Serampore	47·1	Bhagulpore	54·3
Bhagulpore	45·3	Comillah	53·9
Patna	35·3	Patna	53·5
Arrah	33·5	Puri	46·2
Hughli	32·2	Suburbs of Calcutta	43·2
Gya	30·8	Purneah	41·6
Durbhanga	30·0	Naraingunge	37·2
			Jessore	36·7
			Burdwan	35·1

3. That the mortality from the principal diseases under record stood during the week under review as follows, contrasted with similar information for the preceding week:—

		Ratio per mille during the weeks ending—	
		31st October 1885.	24th October 1885.
Cholera	2·4	1·6
Small-pox	"	1
Fever	18·8	16·2
Bowel-complaints	6·0	6·8
Injury	5	4
Other causes	9·3	8·9

indicating a noticeable increase of mortality from cholera and fever, particularly from the latter.

4. That of the diseases mentioned above, excluding small-pox, from which no death was reported, and injury, the mortality from which was high nowhere, cholera, fever, bowel-complaints and the maladies recorded under the head of "Other causes" proved most fatal in the undermentioned Municipalities:—

Cholera.		Fever.		Bowel-Complaints.		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Arrah ...	29·9	Comillah ...	42·4	Serampore ...	23·5	Naraingunge ...	20·7
Bhagulpore ...	6·3	Purneah ...	41·6	Patna ...	13·0	Gya ...	18·4
Monghyr ...	4·5	Gya ...	36·9			Puri ...	16·8
Patna ...	2·6	Jessore ...	36·7			Bhagulpore ...	15·4
		Bhagulpore ...	29·9			Midnapore ...	13·9
		Arrah ...	27·5			Serampore ...	13·7
		Burdwan ...	24·4			Suburbs of Calcutta ...	13·4
		Patna ...	24·3			Patna ...	12·3
		Serampore ...	23·5				

5. That the death-rates in relation of Sex, Class and Age stand as indicated below:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males ...	37·3	Christians ...	13·0	Under 1 year	331·0
Females ...	36·7	Hindus ...	39·8	1 and under 5 years	55·5
Ratio of male deaths to every 100 female deaths ...	115	Mahomedans ...	31·2	5 " " 10 " "	17·5
		Buddhists ...	24·2	10 " " 15 " "	17·6
		Other classes ...	36·4	15 " " 20 " "	18·8
				20 " " 30 " "	20·3
				30 " " 40 " "	22·5
				40 " " 50 " "	26·6
				50 " " 60 " "	35·0
				60 years and upwards	104·0

R. LIDDERDALE, M.D., Deputy Surgeon-General,

The 14th November 1885.

Sanitary Commissioner for Bengal.

General Remarks on the fluctuation of principal staples carried over the East Indian Railway during the month ended 26th September 1885.

INCREASES.

Coal and Coke.—There was an increase in the upwards and a decrease in the downwards traffic, resulting in a net increase. The increase in the up traffic was due to demands from foreign railways, and the decrease in the down traffic may, in a measure, be attributed to the work in certain collieries having been partly suspended owing to floods.

Jute manufactured (Gunny)—The increase in this commodity was due to heavy transactions in wheat and seeds and gram and pulses.

Wheat.—The satisfactory increase in this staple is due to good demand for export.

Gram and Pulses.—The increase in these articles is attributable to improved local demand chiefly in Bengal.

Other Grains.—As mentioned last month, the increase in these grains were due principally to despatches from Cawnpore and neighbourhood to Bombay and to Dinapore and neighbourhood on this railway.

Seeds.—The increase in seeds was chiefly in linseed, and was due to active demand for export.

Government Stores.—The increase in these articles is chiefly in despatches from Howrah.

DECREASES.

Piece-goods.—The despatches during the previous month were heavy, but during the earlier portion of September 1885, business in the interior was seriously interfered with by heavy rains and floods; hence the decrease in this commodity.

Iron.—This decrease was owing to dull market.

Salt.—The decrease in this staple is chiefly due to despatches from Howrah, *via* Cawnpore and *via* Delhi, owing to less demand.

N. ST. L. CARTER, *Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, the 10th November 1885.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

Approximate return of traffic for week ended 7th November 1885 on 1,515 miles open.

DARJEELING, the 10th November 1885.	
W. STEVENSON, Secy ^r , Darjeeling-Himalayan Ry.	

NOTICE.

The 6th November 1885.—The following draft of Rules, which it is proposed to issue under sections 21, 50 (clause 1) and 51 (clause 1) of Act VI of 1884, is published for general information. These rules will be taken into consideration on the expiry of a month from the date of their first publication in the *Calcutta Gazette*; and the Lieutenant-Governor will receive and give due attention to any objections or suggestions which may be made by any person within that period.

J. WARE EDGAR,
Offy. Secy. to the Govt. of Bengal

UNDER the powers conferred upon him by section 21 of Act VI of 1884 (the Inland Steam-vessels Act), and, with the sanction of the Governor-General in Council, the Lieutenant-Governor has been pleased to make the following rules for the survey of Inland Steam-vessels:—

1. Surveys shall be made at the Ports of Calcutta, Chittagong, Patna, Cuttack, Goalundo, Kooashtea, Dehree, Khoolna, and at such other places, as may, from time to time, be declared by the Local Government to be places of survey upon due notice or application from the owner, on any day in the year, with the exception of Sundays and Government holidays, by the Surveyor or Surveyors appointed under the Act. The declarations of surveyors will be made and certificates of survey will be granted in the annexed forms on the payment of fees specified in the second Schedule annexed to the Act.
2. The Surveyors will be guided by the rules hereunto annexed in making their survey. In cases where two Surveyors are employed, the Engineer-Surveyor will survey the engines, boilers, and all the machinery required to be surveyed under the Act. The Ship-wright Surveyor will inspect the hull, equipments, and passenger accommodation; measure and determine the number of passengers the vessel is fit to carry, and see that the certificates of the master, mates, and engineers are such as is required by the Act; also that the lights and fog signals are in accordance with the regulations for the prevention of collisions at sea.
3. Owners of steam-vessels requiring survey are requested to give the Surveyor at least three days' notice in writing when a survey is required, and are warned that, should such notice fail to be given, the Surveyor is not responsible for any delay or inconvenience which may occur in consequence.
4. This notice (which is to be preserved by the Surveyor) must state explicitly the name of the steamer to be surveyed, and the time when, and place at which, she will be ready for inspection.
5. In order to prevent inconvenience and delay to the owners, the Surveyors are to be careful to be in attendance at the appointed time and place. Should they be unable to attend as required, notice should be given to the owners to that effect.
6. Should a steamer not be ready for inspection at the time arranged, the Surveyors may make such arrangements for the subsequent survey as may be convenient to the owner or his agent. All expenses arising out of this postponement will be charged against the owner when the certificate is issued.

SURVEYORS' DECLARATIONS.

7. The Surveyor's declaration under section 9 of the Act shall be made in the form hereunto annexed. The particulars required to be given in the declaration for a certificate of survey are the following, which are treated of under separate heads:—

- (1) That the hull of the vessel is sufficient for the service intended, and in good condi-

- (2) That the boats, life-buoys, lights, signals, compasses, and shelter for deck passengers, and the certificates of the master, engineer or engineers, engine-driver or engine-drivers, are such and in such condition as required by these rules.
- (3) The time (if less than 12 months) for which the said hull and equipments will be sufficient.
- (4) The limits (if any) beyond which, as regards the hull and equipments, the vessel is, in the Surveyor's judgment, not fit to ply.
- (5) The number of passengers (if any) which the ship is, in the Surveyor's judgment, fit to carry, distinguishing if necessary between the respective numbers to be carried on deck and in the cabins and in different parts of the deck and cabins: such numbers to be subject to such conditions and variations according to the time of the year, the nature of the voyage, the cargo carried, and other circumstances as the case requires.

The declaration of the Surveyor as to the boilers and machinery is to contain a statement of the following particulars:—

- (1) That the machinery of the vessel is sufficient for the service intended, and is in good condition.
- (2) The time (12 months or less) for which such machinery will be sufficient.
- (3) That the safety valves and fire hose are such and in such condition as are required by these rules.
- (4) The limits of the weight to be placed on the safety valves.
- (5) The limits (if any) beyond which, as regards the machinery, the vessel is, in the Surveyor's judgment, not fit to ply.

When a Surveyor is, from any reason whatever, unable to complete his declaration, an incomplete declaration should be sent to those who applied for survey as soon as possible, stating in it the reasons for not being able to fill up all the particulars under the various headings. He must take care to obliterate all the items in this declaration that he is unable to certify to as being in accordance with the Acts and regulations.

Surveyors may go on board inland steam vessels.

8. Surveyors may go on board any vessel at any reasonable time for the purpose of inspecting either the certificates of the master, or engineer, or the vessel, the machinery, the boats, other equipments, or for any other purpose rendered necessary by the Act; and the owners, masters, and engineers of inland steam vessels are required by the Act to give to the Surveyors, on being requested so to do, all such information and assistance within their power as may be requisite for the purpose of making the returns required by the Act. In the performance of

NOTICE.

The 6th November 1885.—The following draft of Rules, which it is proposed to issue under section 29 of Act VI of 1884 and section 36 of Act VII of 1884, is published for general information. These rules will be taken into consideration on the expiry of a month from the date of their first publication in the *Calcutta Gazette*; and the Lieutenant-Governor will receive and give due attention to any objections or suggestions which may be made by any person within that period.

J. WARR EDGAR,
Offg. Secy. to the Govt. of Bengal.

Rules for the examination of, and grant of Certificates to, Masters of Inland Steam Vessels under section 29, Act VI of 1884.

1. Candidates for certificates as first class Masters of Inland Steam vessels must be not less than twenty-one years of age and must have served either three years at sea and three years as Mate of a river steamer or Master of a flat, or six years as Mate of a river steamer or Master of a river flat.

2. Every such Candidate shall apply for permission to appear for examination in a printed form* to be filled up by him, and forwarded to the Port Officer, Calcutta, together with such documentary evidence as shall satisfy the Port Officer that the Candidate has complied with the conditions of Rule 66 above, and that he is of sober habits and of good character. Each Candidate shall forward with his application a fee of Rs. 16, which will not be returned in case of failure.

3. The Port Officer shall notify to accepted Candidates the date and hour of examination, in fixing which he shall have due regard to the convenience of their employers. The fees of any Candidate who is not accepted shall be returned to him.

4. The examination of Candidates shall ordinarily be conducted by the Committee which sits quarterly for the examination of Pilots, assisted by two persons selected in each case by the Port Officer, holding certificates as first class Masters of Inland Steam Vessels, duly in force under these rules. But the Port Officer may at any time convene a Special Committee for the examination of Candidates under these rules.

5. Before proceeding to examine any Candidate in the manner provided in the rule next following, the Committee shall carefully test his ability to distinguish the following colours which enter largely into the combinations of signals by day and night, viz. black, white, red, green, yellow, and blue. In the event of any Candidate failing to satisfy completely the usual tests for colour-blindness in respect of all of these colours, the Committee will decline to proceed with his examination, and will report the case through the Port Officer for the information of the local Government.

6. The Committee will examine each Candidate apart, and *visà voce*, in each and all of the following subjects:—

- (1).—The names and courses of the river reaches from Calcutta to Mud Point, and the extent of the sands in such reaches.
- (2).—The sets of the tides within the said limits.
- (3).—The names of all points in the river within the said limits.
- (4).—The candidate's general knowledge of soundings in the channels and over the sands within the said limits.
- (5).—The tracks over the Moyapore and Royapore flats, the Fultah tracks, and the Eastern and Western Guts.
- (6).—The marks for fair channels or hauling to reaches where such exist.
- (7).—The marks for the limits of sands where such exist.
- (8).—The rules of the road.
- (9).—The management of river steamers under all contingencies of meeting, overtaking, and passing vessels in all possible positions within the limits described in No. 1.

(11).—The rules of the Port of Calcutta including the prescribed Storm Signals.

(12).—The provisions of Act VI of 1884, and the rules framed under it.

7. If the Candidate satisfy the Committee as to his knowledge of the subjects set forth in the foregoing rule, and generally as to his competency to command an inland river steamer, they shall certify the same to the Port Officer, who will then grant a certificate of such competency in the form appended to these rules.

8. Every certificate of competency shall be made in duplicate, and one copy shall be delivered to the person entitled to the certificate and the other shall be kept and recorded by the Port Office.

9. No Candidate who fails to satisfy the Committee shall be at liberty to submit a fresh application for examination until six months have passed from the date of such failure.

10. A candidate for a certificate as second class Master of an Inland Steam vessel must produce satisfactory certificates of sobriety and intelligence, and that he has served four years as mate of a small steam vessel or helmsman of a large steam vessel, and shall be examined by the examining body defined in rule 69 *vidv voce* as to his knowledge in the following subjects:—Colours, rule of the road and lights, management of small river steamers, rules of the Port of Calcutta and storm signals.

11. A fee of Rs. 6 will be charged, which will not be returned in case of failure.

By the Honourable the Lieutenant-Governor of Bengal.

Certificate of Competency

18
FIRST CLASS MASTER OF AN INLAND STEAM VESSEL UNDER ACT VI OF 1884.

Witness my Hand and Seal.

WITNESSES

Whereas it has been reported to me that you have been found, after examination, duly qualified to fulfil the requirements of an Inland Steam Vessel under Act VI of 1884, I do hereby grant you this CERTIFICATE of COMPETENCY as such First-class Master.

Given under my Hand and Seal,

By order of the Government of Bengal,

Port Officer, Calcutta.

is _____ day of _____ 18 _____

Registered at the Office of the Port Officer.

~~SECRET~~

The 6th November 1885.—The following draft of Rules, which it is proposed to issue under section 24 of Act VII of 1884, is published for general information. These rules will be taken into consideration on the expiry of a month from the date of their first publication in the Calcutta Gazette; and the Lieutenant-Governor will receive and give due attention to any objections or suggestions which may be made by any person within that period.

J. WARE EDGAR,
Offg. Secy. to the Govt. of Bengal.

UNDER the powers conferred upon him by section 24 of Act VII of 1884 (the Indian Steam-Ships Act), and with the previous sanction of the Governor-General in Council, the Lieutenant-Governor has been pleased to make the following rules for the survey of steam-ships :—

1. Surveys shall be made at the Port of Calcutta upon due notice or application from the owner, on any day in the year, with the exception of Sundays and Government holidays, by the Surveyor to the Port Commissioners. Certificates of survey shall be given in the form hereunto annexed by the Vice-Chairman to the Port Commissioners, on payment of the fee specified in the schedule to the Act. Time and place of surveys.
2. The Surveyors will be guided by the rules hereunto annexed in making their survey. In cases where two Surveyors are employed, the Engineer-Surveyor will survey the engines, boilers, and all the machinery required to be surveyed under the Act. The Ship-wright Surveyor will inspect the hull equipments and passenger accommodation, measure and determine the number of passengers the vessel is fit to carry, and see that the certificates of the master, mates, and engineers are such as is required by the Act, also that the lights and fog signals are in accordance with the regulations for the prevention of collisions at sea. Surveyors' duties.
3. Owners of steam vessels requiring survey are to give the Surveyor at least three days' notice in writing when a survey is required, and should such notice fail to be given, he (the Surveyor) is not responsible for any delay or inconvenience which may occur in consequence. Notice of survey to be given.
4. This notice (which is to be preserved by the Surveyor) must state explicitly the name of the steamer to be surveyed, and the time when, and place at which, she will be ready for inspection. Particulars to be given in notice.
5. In order to prevent inconvenience and delay to the owners, the Surveyors are to be careful to be in attendance at the appointed time and place. Should they be unable to attend as required, notice should be given to the owners to that effect. Surveyors to attend at appointed time.
6. Should a steamer not be ready for inspection at the time arranged, the Surveyors may make such arrangements for the subsequent survey as may be convenient to the owner or his agent. All expenses arising out of this postponement will be charged against the owner when the certificate is issued. Survey if deferred.

SURVEYORS' DECLARATIONS.

7. The Surveyor's declaration under section 11 of the Act shall be made in the form hereunto annexed. The particulars required to be given in the declaration for a certificate of survey are the following, which are treated of under separate heads :— Surveyors' declarations.

- (1.) That the hull of the ship is sufficient for the service intended, and in good condition.
- (2.) That the boats, life-buoys, lights, signals, compasses, and shelter for deck passengers, and the certificates of the master, and mate or mates, engineer or engineers, or engine-driver are such and in such condition as required by any law for the time being in force.

(3.) The time (if less than 12 months) for which the hull and equipments will be

- (4.) The limits (if any) beyond which, as regards the hull and equipments, the ship is in the Surveyor's judgment not fit to ply.
- (5.) The number of passengers which the ship is, in the Surveyor's judgment, fit to carry, distinguishing if necessary between the respective numbers to be carried on deck, and in the cabins and in different parts of the deck and cabins, such numbers to be subject to such conditions and variations according to the time of the year, the nature of the voyage, the cargo carried, and other circumstances as the case requires.

The declarations of the Surveyor as to the boilers and machinery is to contain a statement of the following particulars:—

- (1.) That the machinery of the ship is sufficient for the service intended, and is in good condition.
- (2.) The time (12 months or less) for which such machinery will be sufficient.
- (3.) That the safety valves and fire hose are such, and in such condition, as are required by the Act, and the rules framed thereunder.
- (4.) The limits of the weight to be placed on the safety valves.
- (5.) The limits (if any) beyond which as regards the machinery, the ship is, in the Surveyor's judgment, not fit to ply.

When a Surveyor is, from any reason whatever, unable to complete his declaration, an incomplete declaration should be sent to those who applied for survey as soon as possible, stating in it the reasons for not being able to fill up all the particulars under the various heading. He must take care to obliterate all the items in this declaration that he is unable to certify to as being in accordance with the Acts and regulations.

Surveyors may go on board ships.

8. Surveyors may go on board any ship at any reasonable time for the purpose of inspecting, either the certificates of the master, mates, or engineers, or the vessel, the machinery, the boats, other equipments, or for any other purpose rendered necessary by the Acts; and the owners, masters, mates, and engineers of steam-ships are required by the Act to give to the Surveyors, on being requested so to do, all such information and assistance within their power as may be requisite for the purpose of making the returns required by the Acts. In the performance of this part of their duties, Surveyors are to be careful to avoid impeding the duty of the vessel, or wilfully giving offence to any of the officers. If they should be hindered or vexatiously obstructed by any person in the performance of their duties, they should by no means mark it by personal resentment, but should communicate the facts without delay to the proper authorities, by whom the case will be taken up, if necessary.

Inspection to be made in the presence of owner, agent, or responsible person.

9. Surveyors should, if possible, make their inspections when the agent, master, or chief mate, and engineer of the vessel are present. Repairs can then be required, and defects can be pointed out to the proper persons without incurring the uncertainty and delay attendant upon messages delivered to the subordinate officers. If the owners do not regard the survey as being of sufficient importance to instruct a responsible representative to be present, the Surveyors will of course make the survey in his absence.

SUPPLEMENT TO The Calcutta Gazette.

WEDNESDAY, NOVEMBER 25, 1885.

OFFICIAL PAPERS.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on payment of Six Rupees per annum if delivered in Calcutta, or Twelve Rupees if sent by Post.

REVENUE AND AGRICULTURAL DEPARTMENT.

NOTIFICATION—MUSEUMS AND EXHIBITIONS.

: : Circular No. 66Ex.—1L-49, dated 6th November 1885.

The appended forms of application for the use of Private Exhibitors, received from the Royal Commission for the Colonial and Indian Exhibition, 1886, are published for general information. The sections of the Exhibition to which the forms refer are

COLONIAL AND INDIAN EXHIBITION, LONDON (1886).

Form of application for space to show goods in the Private Exhibitors' Court.

INDIAN SECTION.

The Royal Commission invite applications for space to exhibit in the Indian section of this Exhibition from *bond fide* Merchants and Manufacturers having places of business in India. It must be distinctly understood that no applications from Importers or Agents can be entertained; but Indian Exhibitors may appoint London representatives as their Agents in the forthcoming Exhibition.

Allotments will be made by the Royal Commission in accordance with the space available.

Applications must be made by Indian Firms on this form, and no allotment will be finally made before such application has been received.

Applications to be made, through the Secretary to the Government of India, Revenue and Agricultural Department, or through Messrs. HENRY S. KING & Co., and their Indian Branches, to the Secretary to the Royal Commission.

TO THE SECRETARY TO THE ROYAL COMMISSION.

Please allot to me (us) the following amount of space for the exhibition of articles described opposite.

Floor Space.....feet xfeet.

NOTE.—The private Exhibitors have a Special Gallery allotted to them, with a space twelve feet deep on either side of a central passage. This space is divided into bays or lengths of ten feet, which are available for conversion into small shops, two or three of which can be thrown into one where a larger space is required. The erection of a Screen on Façade along the front by the Exhibitor is compulsory, and can either be done by the Exhibitor, who must submit a design for approval, or will be furnished by the Commission, at the nominal cost of £1 per foot run.

Special arrangements will be made for exhibiting Carpets, which must not exceed 12 feet by 9 feet.

This form does not apply to Exhibits of Paintings, Tea, Coffee, Cocoa, Tobacco, and Cigars, for which special forms of application are prepared.

DESCRIPTION OF ARTICLES.*

See Regulation No. 32 (on other side).

In case of my application being granted (wholly or in part), I declare that I will strictly adhere to the published Regulations of the Royal Commission, as printed overleaf, which I will consider as binding, and to any further Regulations which may be issued from time to time.

Signature of intending Exhibitor or firm of Exhibitors

Date _____

* As this description will form the basis of the Catalogue entry, it is requested that it may be carefully written.

REGULATIONS.

1. The Exhibition will be opened on or about the 1st May 1886, and will remain open for a period of about six months.
2. Subject to the condition stated in Regulations 3 and 4, the objects to be exhibited are left entirely to the discretion of the Governments participating, in so far as they illustrate the resources, products, and manufactures of the Colonies and the Indian Empire. For reasons stated elsewhere, no classification has been attempted by the Royal Commission; but each Government is invited to classify its own collection.
3. All fulminating and explosive substances and all dangerous substances are absolutely forbidden to be sent, but they may be represented by models or dummies.
4. Spirits, oils, essences, corrosive substances, and generally all substances which might spoil other articles or cause inconvenience to the public, can only be received in substantial and suitable vessels of small size.
5. There will be no charge for space.
6. Motive power and water will be supplied free of cost, *provided that notice by letter or cable is given before the 1st January 1886*. Foundations can be laid, under the superintendence of the Secretary to the Royal Commission, upon requisition from the Executive Commissioners with their order for payment. The work will be done at the expense of the Commissions requiring it; and full particulars of the size, character, and intended position of machines should be given.
7. As the allotments of space have in most cases been already notified to the Colonial and Indian Governments, no further applications can, except under special circumstances, be entertained. Applications to exhibit from any individual or firm will be referred to the Executive Commissioners for the various Colonies and for India.
8. The Executive Commissioners appointed by their respective Governments will have the entire control of the arrangements of the goods exhibited in their respective sections, subject to the conditions stated in Regulations 9 to 16.
9. At least one main passage of not less than fifteen feet must extend throughout each Court from end to end; and, where doors or openings occur, passages of not less than ten feet in width must be provided communicating with the main central passage. The necessity of providing adequate space for allowing the proper inspection of articles exhibited need scarcely be insisted upon.
10. Signs or name-boards should be placed parallel with the main passages; that is, parallel with the frontage of the respective stands. It is suggested that they should be black with gold letters. Care should be taken to prevent any interference with the electric lighting arrangements.
11. All handbills, printed matter, &c., connected with exhibits, and intended for gratuitous distribution, should be duly authorised by the Executive Commissioners for each country, who will find the Secretary to the Royal Commission ready to cooperate with them.
12. It is especially requested that no cases or goods shall exceed the height of ten feet. This rule is not intended to prevent the erection of any special trophies; but designs to scale of all trophies should, previous to their erection, be notified to the Secretary to the Royal Commission.
13. As the Exhibition Buildings are leased by the Royal Commission, no alterations affecting the structure of the buildings as regards the floor, walls, or roofing can be permitted without special application to the Secretary to the Royal Commission.
14. Executive Commissioners will be required to provide all necessary attendance for keeping the stands and exhibits in their section properly cleaned and in good order; all stands should remain uncovered during the hours the Exhibition is open to the public.
15. It is probable that the hours during which the Exhibition will remain open to the public will be from 10 A.M. to 10 P.M. on all days, except Wednesdays and Saturdays, when the hour of closing will be 11 P.M. These arrangements are, however, subject to alteration. The Exhibition will not be open on Sundays.
16. No Exhibit may be removed from the Exhibition Buildings until the close of the Exhibition without the permission of the Executive Commissioners, countersigned by the Secretary to the Royal Commission; and consequently no selling, with a view to removal prior to the close of the Exhibition, should be allowed.
17. No article exhibited may be photographed, drawn, copied, or reproduced in any manner whatsoever without the special sanction of the Executive Commissioner of the section; this sanction should be noticed to the Secretary to the Royal Commission.
18. All packages containing goods intended for exhibition must have painted on them the distinctive mark *C. I. E.*, together with the name of the colony from which they are sent. They must in all cases be consigned to the Executive Commissioner of the Colony from which they are sent.
19. All goods intended for Exhibition should reach the Exhibition Buildings on or before the 31st January 1886, and, if convenient to Executive Commissioners, they can be received from 1st January 1886; it is hoped that everything will be reported as ready for inspection at least fourteen days previous to the end of April.
20. Cases should be unpacked with the greatest possible despatch, and when empty should be removed immediately from the buildings. The Secretary to the Royal Commission will have pleasure in recommending places of storage for empty cases; but it must be distinctly understood that all arrangements for the unpacking, removal, storage, and bringing back of cases must be made and expenses borne, by the various Colonial and Indian Commissions.
21. All expenses connected with the installation and display of Exhibits will be defrayed by the Colonial and Indian Commissions.
22. The Royal Commission reserves to itself the right of refusing to admit any Exhibit.
23. The Royal Commission reserves to itself the sole right of publishing and selling a General Catalogue, and General Guide and Plans of the Exhibition; and for this purpose requests that a descriptive list, duly classified of the goods intended for exhibition, may be forwarded to the Secretary to the Royal Commission by the respective Commissions not later than the 1st December 1885. Each Commission will, however, be at liberty to publish and sell through the official publishers to the Royal Commission a special Catalogue of its collection. It is hoped, for the sake of uniformity, that the size of all such publications may be the same size as that of the General Catalogue, known as Demy 8vo. (8½ in. by 5½ in.).
24. A Colonial Dining Room will be organised, under the superintendence of the Royal Commission, to which Exhibitors are invited to send, through their Executive Commissioners, Colonial preserved food and wines for consumption by Visitors. Special Regulations have been prepared for this department.
25. Arrangements will be made for the sampling of Wines; and an Officer will be appointed to superintend this department. Cellarage accommodation will be provided.
26. No Refreshment or Tasting Bars will be allowed beyond those arranged for by the Royal Commission.
27. It is proposed to organise a Fruit and Vegetable Market, at which Colonial and Indian produce will be on sale. Special regulations will be framed for this section of the Exhibition.
28. It is proposed to hold an Exhibition of Living Animals from the Colonies and India. Special rules will be framed for its regulation.
29. The right to add to, alter, amend, or expunge any of these rules is reserved by the Royal Commission.
30. The Royal Commission, while taking every precaution for the protection of articles in the buildings, cannot hold itself responsible for their loss or damage, from whatever cause arising.
31. If any damage or injury shall be caused or occasioned during the Exhibition by any exhibited machine, implement, or article to any visitor or other person, or to any officer, servant, or others then and there employed by the Royal Commission of the Colonial and Indian Exhibition, 1886, then the Executive Commissioner in whose section such machinery, implement, or article may be placed shall indemnify and hold harmless the said Royal Commission from and against all actions, suits, expenses, and claims on account or in respect of any such damage or injury which may be so caused or occasioned.
32. Only objects of British East Indian manufacture will be admitted; and under no pretence whatever will Persian, Turkish, Chinese, or Japanese Art Works be permitted to be either shown or stored in the Exhibition. The Royal Commission reserves the right of ordering the removal of any objects it considers disqualified; and the Exhibitors hereby engage to remove any such Exhibits after due notice, or to permit the removal by Officers of the Commission.
33. All communications to be addressed to the Secretary to the Royal Commission, Exhibition Buildings, South Kensington, London, S. W.

* N.B.—A modification of Rule 16 as applied to the Private Exhibitors' Court has already been notified by me to Mr. Buck. It will be understood, however, that the rule cannot be cancelled, although a special exception or modification has been allowed as regards this Court.

COLONIAL AND INDIAN EXHIBITION, LONDON (1886).

Form of application to exhibit paintings, &c.

INDIAN SECTION.

The Royal Commission is prepared to receive applications from persons desirous of exhibiting Oil-paintings, Water-colours, and Drawings of Indian Subjects by Artists and Amateurs resident in India.

The Royal Commission will defray the cost of packing and freight from Bombay to London of pictures from India, subject to the following conditions :—

- (1) Paintings and drawings will be inspected at Bombay, in order that any which may be considered unsuitable should not be sent forward.
- (2) The paintings and drawings, which must be without frames, must be sent to Messrs. King, King & Co., of Bombay, not later than the 30th of November 1885.
- (3) Frames for pictures will be provided by Messrs. Henry S. King & Co., London ; full particulars of cost, &c., can be obtained from Messrs. King, King & Co., Bombay, and Messrs. King, Hamilton & Co., Calcutta.
- (4) Artists and Amateurs now in Europe, and formerly resident in India, who desire to exhibit pictures of interest connected with India should communicate with Messrs. Henry S. King & Co., 65, Cornhill, not later than the 31st December 1885.
- (5) It must be understood that the Royal Commission undertakes no risk, and that Exhibitors must make their own arrangements as to Insurance.
- (6) It must be distinctly stated when pictures are intended for sale ; and the price in English currency must be notified on the application form. Messrs. King & Co. are authorised to make a charge of 5 per cent. on all pictures sold.

COLONIAL AND INDIAN EXHIBITION, LONDON (1886).

Form of application to exhibit Tea, Coffee, and Cocoa.

The Royal Commission invites applications for space to exhibit samples of Tea, Coffee, and Cocoa, of Indian or Colonial production, from *bona fide* planters and manufacturers having places of business in India or the Colonies.

It must be distinctly understood that no applications from importers can be entertained.

Indian samples must be delivered, carriage free, to Messrs. King, Hamilton and Co., Calcutta, or Messrs. Henry S. King & Co., 65, Cornhill, London, who will bear all expenses of subsequent transit and exhibition.

Colonial samples must be delivered, carriage free, to Messrs. Henry S. King & Co., 65, Cornhill, London.

Applications to be made to Messrs. King, Hamilton & Co., Calcutta, or Messrs. Henry S. King & Co., 65, Cornhill, London, who will submit same to the Secretary to the Royal Commission.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 21st November 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BORDWAN DIV.	1 Hurdwan, Nov. 21 '85	Nil	Weather—seasonable. Prospects of <i>amun</i> excellent. <i>Rubbee</i> promises well. Price of rice 14 to 18 seers per rupee.
	2 Bankoora, „ 21 „	Nil	Weather—fine and clear; temperature a little higher than usual at this season. Harvesting of <i>amun</i> about to commence. <i>Rubbee</i> sowings, where germinated, are being irrigated and promise well. Prices improving. Health good.
	3 Beerbhoom, „ 21 „	Nil	Weather—fine. <i>Amun</i> crop being harvested. Prospects of crops generally good. Prices of food-grains falling. General health good.
	4 Midnapore, „ 21 „	Nil	Weather—seasonable. A good <i>amun</i> harvest is secured in three-fourths of the district. <i>Boro</i> rice and <i>rubbee</i> crops doing well. Public health generally fair, but some cases of cholera reported.
	5 Hooghly, „ 21 „	Nil	Weather—slightly warm for the season; cloudy to-day (21st). Prospects of all crops satisfactory. <i>Amun</i> harvest about to commence. General health fair, but there is much fever about.
	Howrah, „ 23 „	Nil	Weather—cloudy; sultry at times. State and prospects of crops favourable except in flooded parts. <i>Boro</i> paddy is being sown.
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Pergha, Nov. 23 '85	Nil	Weather—warm for the season with passing clouds. Prospects of <i>amun</i> , except on low and inundated tracts, good. <i>Rubbee</i> crops doing well. Public health on the whole good.
	7 Nuddea, „ 21 „	Nil	Weather—seasonable. <i>Rubbee</i> crops everywhere excellent. Public health fairly good. Mortality amongst cattle is widely reported as due to their feeding on grass which has been long submerged under water.
	8 Khoolna, „ 21 „	Nil	Weather—cloudy and rather close, without rain. Late rice being cut on high lands; outturn average. Winter crops have been sown and are coming up. Fever reported from some places.
	9 Jessore, „ 20 „	Nil	Weather—cloudy and hot for the time of year. Sowing of <i>rubbee</i> crops not yet completed. Harvesting of <i>amun</i> crop continues. Prospects good. Fever continues, and cholera has also appeared in the district.
	10 Moorshedabad, „ 21 „	Nil	Weather—rather cloudy, otherwise seasonable. <i>Amun</i> will yield more than an average outturn. <i>Kalai</i> doing very well, and so are <i>rubbee</i> crops generally. Indigo being sown. Public health good. Common rice 16 to 19 seers per rupee.
RAJSHAHY DIV.	11 Dinagepore, Nov. 20 '85	Nil	Weather—fair and seasonable. State and prospects of <i>amun</i> crops good. Rice 18 to 25 seers per rupee.
	12 Rajshahye, „ 21 „	Nil	Weather—seasonable. Harvesting of <i>amun</i> paddy continues; outturn expected to be good. Cutting of sugarcane going on. Prospects of <i>rubbee</i> generally good as yet. Fever general.
	13 Itanagpore, „ 21 „	Nil	Weather—cool with continued north-west wind. Prospects of <i>amun</i> and other standing crops continue good. Tobacco being planted. Cholera has broken out in Jaldhaca station in the Nilphamari sub-division. Fever prevalent.
	14 Hogra, „ 21 „	Nil	Weather—fine, but by no means cold. State and prospects of crops continue very favourable. Public health fair.
	15 Pabna, „ 21 „	Nil	Weather—cool, some threatening of rain. Crops promise well. <i>Amun</i> in Serajgunge sub-division is said to be very good. Mustard, <i>kalai</i> and <i>til</i> coming up. A good deal of fever in Serajgunge, and some cholera.
	16 Darjeeling, „ 21 „	0.04	Weather—bright and cold. Prospects of crops good.
	17 Julpigoree, „ 21 „	Nil	Weather—cold and seasonable. Reaping of <i>kaimanti</i> paddy commenced; outturn fair. Prospects of other crops good. Sowing of winter crops progressing. Public health good.
<i>Eastern Districts.</i>			
DACCA DIVISION	18 Dacca, Nov. 21 '85	Nil	Weather—seasonable. Sowing of winter crops going on. Cutting of <i>amun</i> paddy commenced. Prospects of crops good. A few sporadic cases of cholera in town. Public health generally good.
	19 Farreedpore, „ 21 „	Nil	Weather—seasonable. Prospects of crops good. Cold-weather crops being fast cultivated.
	20 Backergunge, „ 19 „	Nil	Weather—seasonable. Prospects of <i>amun</i> good. General health poor; fever prevailing.
	21 Mymensingh, „ 20 „	Nil	Weather—seasonable. State and prospects of crops excellent. Public health fair.
CHITTAGONG DIV.	22 Chittagong, Nov. 24 '85	4.77	Standing crops partly damaged by rain and grubs. <i>Amun</i> being harvested. Prices steady. Public health good.
	23 Noakholly, „ 20 „	0.13	Weather—first part of the week clear and latter part cloudy. Rice being harvested. Sowing of cold-weather crops progressing. Prospects fair. General health good.
	24 Tipperah, „ 19 „	Nil	Weather—occasionally cloudy and generally very hot for the time of year. Paddy harvest commenced; outturn good. Public health fair.
	25 Chittagong Hill Tracts, „ „	...	Report not received.
	Hill Tipperah, „ 18 „	Nil	Cold weather gradually setting in. Prospects of <i>amun</i> paddy and sugarcane good. Chillies and tobacco being transplanted. Cotton and <i>til</i> being gathered. Public health good.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
SHAR.			
26	Patna, Nov. 21 '85	Nil	Weather—clear, evenings and mornings cool. Paddy on high lands suffering from want of rain. <i>Rubbee</i> crops germinating well. Sowing still going on, but rain wanted. Public health good.
27	Gya, " 21 "	Nil	Weather—seasonable. Harvesting of rice crop proceeding; general outturn will be good. <i>Rubbee</i> and poppy sowings, which have germinated, look well. Health good. Prices easier than at the corresponding period of last year.
28	Shahabad, " 21 "	Nil	Weather—seasonable. Winter rice being harvested. <i>Rubbee</i> sowings almost completed. Poppy sowings in full progress, but with the help of artificial irrigation. Where the seed has germinated it is doing well. Fever and cholera still reported from Sasaram and Bhahub, but abating. Cattle-disease prevalent in Sasaram.
29	Durbhunga, " 21 "	Nil	Weather—seasonable. Paddy crop generally favourable and nearly ready for reaping. <i>Rubbee</i> coming on well. Price of rice falling slightly. A few cases of cholera still reported from Madhubani.
30	Muzafferpoore, " 21 "	Nil	Weather—fair. <i>Rubbee</i> sowings almost completed. Seeds grown thriving well. Prospects of rice crop favourable. Poppy sowings progressing favourably. Cholera still reported from Sitamarhi; in the rest of the district public health generally good.
31	Saran, " 21 "	Nil	Weather—fair and clear; days warm for the time of the year, nights cool. <i>Aghani</i> paddy ripening. <i>Rubbee</i> coming on well. Bulk of the poppy lands has been sown. A fall of rain would do much good. Irrigation is being done where practicable. Prices easy. Cases of fever reported, otherwise public health good.
32	Chumparan, " 21 "	Nil	Weather—seasonable. Harvesting of <i>bhadoi</i> crops completed. Prospects of <i>aghani</i> crops continue good. Sowing of poppy seeds progressing; germination fine and healthy. Prices of food-grains stationary. Public health fair.
33	Monghyr, Nov. 21 '85	Nil	Weather—seasonable. <i>Rubbee</i> sowings in progress for which a shower of rain would be beneficial. Prices falling. Public health good.
34	Bhagulpore, " 21 "	Nil	Weather—warm for the time of year; sometimes cloudy. Rice prospects fair. Upland rice has suffered for want of rain. <i>Rubbee</i> prospects good. Caterpillars have appeared near the Ganges. Mustard and linseed crops in Banka reported very bad. Cholera still prevalent in the north. Prices stationary.
35	Purneah, " 21 "	Nil	Weather—very fine. <i>Aghani</i> good where rainfall was sufficient. <i>Rubbee</i> very good. Much cholera and fever.
36	Maldah, " 21 "	Nil	Weather—fine and cool. Harvesting of winter rice begun; good outturn expected. All other crops also promise well. Common rice 17 to 22 seers per rupee. Public health good.
37	Sonthal Perga, " 21 "	Nil	Weather—seasonable. Paddy on high lands being harvested; outturn good everywhere. Prospects of standing crops on the whole excellent. Coarse rice (new) 25 seers per rupee. Health fair.
BEISSA.			
38	Cuttack, Nov. 20 '85	Nil	Weather—cloudy since 19th. Early <i>sarad</i> being reaped with fair outturn; late <i>sarad</i> flowering. Common rice selling at 12 seers per rupee in town and 15 to 17 seers in the interior. Cases of cholera reported from some parts of Jajpur and Kendrapara sub-divisions; otherwise public health good.
39	Pooree, " 19 "	Nil	Weather—seasonable. Cloudy during last two days of the week. <i>Laghu sarad</i> being harvested; late <i>sarad</i> ripening. <i>Rubbee</i> being sown. Relief works going on in the Chilka tracts which have suffered loss of crops from drought. Common rice selling at an average of 19 seers 3 chittacks per rupee in the Sudder sub-division and 16 seers in the Khoorda sub-division. Cases of cholera still reported from town.
40	Balasore, " 20 "	Nil	Weather—cool and cloudy. Harvesting of early <i>sarad</i> crop is going on. Prospects of late <i>sarad</i> good. <i>Rubbee</i> crops doing well. A few cases of cholera in Dhammagore and Balasore Chaklas; public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hasaribaga, Nov. 20 '85	Nil	Weather—clear and cold. Paddy harvest continues with a good outturn. Prospects of <i>rubbee</i> crops favourable. Poppy being sown in places. Public health generally good.
42	Lohardugga, " 21 "	Nil	Weather—seasonable. Winter paddy being harvested; outturn appears to be good. <i>Rubbee</i> sowing still continues. A few cases of fever reported; general health otherwise good.
43	Singbhoom, " 20 "	Nil	Weather—cloudy. Rice crop being reaped and stored. <i>Rubbee</i> doing well. Fever prevalent. Prices easy.
44	Manbhoom, " 21 "	Nil	Weather—fine and cool. Reaping of rice progresses with good outturn. Cold-weather crops promise fairly. Coarse new rice quoted this day (21st) in the Purulia market at 26 seers per rupee.

Published for general information.

2A, the 16th November 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE TWO WEEKS ENDING FRIDAY, THE 13TH AND 20TH OF NOVEMBER 1885.

THE meteorology of the week ending Friday, the 13th of November, calls for no detailed notice, as all the conditions were typical of normal north-east monsoon weather. During this period skies were almost cloudless, pressure was generally from about 0.02" to 0.06" above the normal, temperature was about normal, and rainfall was practically absent over the whole province. On the first day of the following week the weather conditions in the south of the Bay became disturbed. Winds commenced to strengthen at all the southern stations, while pressure fell rather rapidly off the Ceylon coast. These conditions continued on Sunday, the 15th, and it was clear that stormy weather was commencing. On the 15th there were the first indications of the formation of a cyclonic storm in the extreme south of the Bay, and on this day Negapatam reported 8 inches of rain and Madras 4 inches. Weather continued very stormy along the coast on the following day, and at Negapatam, on the 17th, the excessive rainfall of 13.61 inches was reported, while on the same day Madras reported 5.73 inches; on these two days Negapatam reported no less than 21.62 inches of rain and Madras 9.74 inches. The unsettled and stormy weather then commenced to move in a northerly direction, and on the 18th the storm was a little to the south of Madras and rather close to the coast. It then moved slowly in a north-easterly direction, and on Friday, the 20th, or the last day of the week under review, it was nearly in the centre of the Bay, and in about the latitude of Masulipatam and Diamond Island. At this time the storm was giving strong winds in the south and west of the Bay, and very strong winds at Diamond Island.

During the period of the formation and gradual advance of the storm, and particularly when it reached the centre of the Bay, winds in Lower Bengal became north-easterly, skies began to cloud over rapidly, and temperature and humidity increased very considerably, so that at the close of the week the conditions, particularly at the southern stations, were decidedly disturbed. For the second week under review pressure was decidedly irregular, and in some cases slightly below the normal, while in others it was decidedly in excess; the defect was largest at Cuttack, where it equalled 0.01", while at Durbhunga there was an excess of 0.1". For the whole province the mean variation for the week was equal to an excess of 0.036."

Temperature has also been above the normal over the whole province, the largest excess in any meteorological district being one of 2° in East Bengal, while the smallest excess was in Orissa, where it has equalled 0.6°. For the whole province the average excess temperature was about 1.3°. Humidity has also been largely above the normal for the week, and the air over almost the whole province has been decidedly damp, particularly at the close of the week.

The average rainfall during the week, from the 13th to the 20th, was equal over the whole province to only one hundredth of an inch, and, practically speaking, except in the Midnapore district, at Cox's Bazar and at two stations in the Noakholly district the whole province has been rainless. The rainfall in these districts has occurred entirely within the last two or three days of the week, when the general conditions were disturbed. The heaviest falls of rain recorded were 1.05 inches at Fenny and 0.64 inch at Burrisal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 20th of November 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, S. G.'s Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ...

The total fall of rain from 15th to 21st November 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The total fall from 1st January to 21st November 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All thermometers are verified, and the readings have been corrected to a standard constructed and verified at Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 1 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed at the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beekley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, d drizzling rain, Δ dew.

N.B.—In the weekly abstract from 1st to 7th November 1885, read 137.3 instead of 18 as the sum in sun of the 6th.

HENRY F. BLANFORD,

METEOROLOGICAL OFFICE, INDIA;

Meteorological Reporter to the Government of India

The extreme variation of temperature ... 22·0

The maximum temperature ... 85·9

The mean relative humidity ... 74%

The total fall of rain from 15th to 21st November 1885 ... Nil

The mean temperature and humidity are obtained by applying to the mean of the 10n, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 23rd November 1885.

HENRY F. BLANFORD,
Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE mortuary returns of the districts in Bengal for the month of September 1885 disclose the following results :—

1. That 146,092 deaths occurred among a population of 66,163,884, representing an annual death-rate of 26·40 per 1,000, against 24·72 per 1,000 in the preceding month, or 18·12 per 1,000 in the corresponding month of the past year, showing, as compared with both the past periods, a considerable improvement in the registration of deaths.

2. That the highest casualty-rates were returned from the undermentioned districts :—

Districts.			Districts.		
		Ratio per mille.			Ratio p. mille.
Monghyr	...	54·24	Hughli	...	34·5
Bhagulpore	...	45·12	Nuddea	...	33·7
Chumparun	...	42·60	Sonthal Pergunnahs	...	32·4
Mozufferpore	...	40·56	Hazaribagh	...	32·4
Gya	...	39·72	Birbhum	...	30·8
Patna	...	39·60	Rungpore	...	29·5
Shahabad	...	39·48	Murshidabad	...	26·2
Sarun	...	35·52	Durbhanga	...	25·2

3. That the total mortality from the following specific heads of disease stands as follows :—

						Ratio per millg during—	
						September 1885.	September 1884.
Cholera	3·48	·60
Small-pox	·02	·04
Fever	18·00	13·56
Bowel-complaints	1·08	·72
Injury	·72	·48
Other causes	3·00	2·40

The above figures indicate that, as compared with the results of the corresponding month of the preceding year, there was an enhancement of mortality from all diseases, excepting small-pox, notably from fever and cholera.

4. That, referring to the death-causes above indicated, while the maladies grouped under the head of "other causes" were noticeably fatal only in the Sarun district, viz. at 11·76 per 1,000 of its population, and the casualties from small-pox, bowel-complaints and injury were nowhere conspicuously large, cholera and fever caused the greatest loss of life in the following districts :—

Cholera.			Fever.		
		Ratio per mille.			Ratio per mille.
Mozufferpore	...	21·60	Monghyr	...	42·96
Chumparun	...	20·64	Bhagulpore	...	32·16

[illegible]

MEMORANDA.

THE returns of the principal Municipalities in Bengal, exhibit for the week ending 7th November 1885, the birth and death-rates of 26.5 and 41.0 per 1,000 of population, respectively, as opposed to 27.3 and 37.0 per 1,000, respectively, during the preceding week ending 31st October, indicating a considerable advance in the registration of deaths and a small falling off in that of births.

2. These events were registered at the highest rates in the following Municipalities :—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Comillah	...	50.1	Gya	...	62.2
Beaulah	...	47.3	Puri	...	58.7
Serampore	...	47.2	Bhagulpore	...	58.9
Chittagong	...	46.9	Purneah	...	55.4
Mozufferpore	...	42.5	Serampore	...	55.0
Bhagulpore	...	38.9	Patna	...	50.0
Bali	...	38.6	Utterpara	...	47.2
Gya	...	37.0	Suburbs of Calcutta	...	46.9
Patna	...	34.4	Dacca	...	46.8
Hughli	...	32.2	Mozufferpore	...	43.8
			Burdwan	...	38.1
			Howrah	...	37.8
			Du-bhanga	...	37.8
			Monghyr	...	34.4
			Hughli	...	33.5
			Kishnaghur	...	30.3

3. The mortality from the specific death-causes stood as follows, in comparison with the similar information for the preceding week :—

			Ratio per mille during the weeks ending—	
			7th November 1885.	31st October 1885.
Cholera	2.3	2.4
Small-pox	1	...
Fever	20.4	19.8
Bowel-complaints	7.7	6.0
Injury	2	5
Other causes	10.3	9.3

The noticeable point apparent from the above figures is that there was a sensible increase of fatal results from fever, bowel-complaints, and the maladies coming under the head of "Other causes."

4. Excluding small-pox and injury, the mortality from which was nowhere high, the rest of the death-causes proved most fatal in the undermentioned Municipalities :—

Cholera.		Fever.		Bowel-Complaints.		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri	18.9	Purneah	48.5	Serampore	17.7	Gya	19.1
Arrah	14.3	Utterpara	37.8	Puri	16.7	Midnapore	15.6
Howrah	5.7	Gya	37.6	Bhagulpore	11.5	Kishnaghur	15.1
Monghyr	3.6	Mozufferpore	31.6	Suburbs of Calcutta	11.4	Dacca	14.9
Suburbs of Calcutta	3.1	Bhagulpore	29.0	Burdwan	10.7	Puri	14.7
Durbhanga	3.1	Patna	27.6	Patna	10.4	Suburbs of Calcutta	14.3
		Jessore	24.4			Serampore	13.7
		Dacca	24.1			Bhagulpore	13.6
		Serampore	23.6			Patna	12.0
		Hughli	22.8				
		Beaulah	21.0				

5. The death-rates in relation to Sex, Class and Age are shown below :—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	40.4	Christians	21.7	Under 1 year	30.7
Females	41.7	Hindus	44.1	1 and under 5 years	52.1
Ratio of male deaths to every 100 female deaths	109	Mahomedans	34.6	5 " " 10 " "	21.0
		Other classes	36.4	10 " " 15 " "	21.7
				15 " " 20 " "	27.2
				20 " " 30 " "	25.9
				30 " " 40 " "	24.5
				40 " " 50 " "	32.4
				50 " " 60 " "	44.2
				60 years and upwards	111.1

R. LIDDERDALE, M.D., Deputy Surgeon-General,

The 23rd November 1885.

Sanitary Commissioner for Bengal.

SUPPLEMENT TO THE CALCUTTA GAZETTE, NOVEMBER 25, 1885.

of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number as before, as it was not necessary to re-censuse them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "196" the ratios under which have been omitted, inasmuch as it was not necessary to re-censuse them. The ratios have consequently been calculated on the results of the census under this head not having been recorded under the authorized form of age classification.

GENERAL REMARKS AND EXPLANATIONS.

THE total quantity of traffic carried during the month under review is 8,805 tons against 18,564 tons carried during the corresponding period last year, the decrease being 9,759 tons. This unsatisfactory result is due to stoppage of through booking of goods with the Eastern Bengal State Railway, consequent upon serious breaks upon that line for 21 days (out of 30) of September.

There has been, it will be seen from the statement given above, a falling off under every head except food-grain, in which commodity the increase is 1,875 tons, due to considerable traffic having been done locally in *aus* paddy.

C. J. KEENE, *Traffic Superintendent.*

TRAFFIC SUPERINTENDENT'S OFFICE, Saidpur, the 29th October 1885.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 25th November 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
SUNDERBAND DIVISION.	<i>Western Districts.</i>		
	1 Burdwan, Nov. 28 '85	Nil	Weather—seasonable. <i>Amun</i> is being harvested. <i>Rubbee</i> promising. Price of rice 14 to 18 seers per rupee. Public health good.
	2 Bankoora, „ 28 „	Nil	Weather—clear; evenings and mornings cool. Cutting of <i>amun</i> commenced with good outturn. Prospects of standing crops on the whole very favourable. Public health good.
	3 Beerbhoom, „ 28 „	Nil	Weather—fine. <i>Aus</i> crop harvested. Outturn of <i>aus</i> and <i>amun</i> expected to be at least an average crop. <i>Rubbee</i> crops being sown. Prices falling. Public health satisfactory.
	4 Midnapore, „ 28 „	Nil	Weather—seasonable. Prospects of crops continue generally good. Price of rice low. Fever disappearing, but cases of cholera still reported.
	5 Hooghly, „ 28 „	0.10 berampore „ 0.04	Weather—seasonable. Harvesting of <i>amun</i> paddy has commenced. Prospects of <i>rubbee</i> crops continue good. Fever prevalent in some places; general health otherwise good.
PASCHIM DIVISION.	Howrah, „ 30 „	0.07	Weather—fine and cool. Crops, so far as spared by the floods, doing well. <i>Amun</i> paddy harvest begun. <i>Boro</i> seedlings being raised. Winter crops and vegetables doing well.
	<i>Central Districts.</i>		
	6 24 Pargha, Nov. 30 '85	Nil	Weather—seasonable. Prospects of <i>amun</i> rice, except on low and inundated parts, are good. Cold-weather crops doing well. Public health on the whole good.
	7 Nuddea, „ 28 „	Nil Kushta „ 0.12	Weather—seasonable. Prospects of cold-weather crops generally excellent. Public health for the most part good, but sporadic cholera reported from Kushta.
	8 Khoolna, „ 28 „	0.14	Rain on night of 21st and cloudy with wind on 22nd, since then weather clear. Paddy harvest commenced; prospects favourable. Winter crops improved by rain. Public health fair.
	9 Jessore, „ 28 „	0.10 Jhenidah „ 0.03	Weather—seasonable. <i>Rubbee</i> crops doing well. Harvesting of <i>amun</i> crop continues; a good outturn expected. Fever continues. Cholera reported from the Jhenidah sub-division.
RAJSHAHY DIVISION.	10 Moorsshedabad, „ 28 „	Nil	Weather—seasonable. <i>Amun</i> rice is being harvested; yield will be above the average. Prospects of all cold-weather crops favourable. Public health good. Price of common rice 16 to 18 seers per rupee.
	11 Dinagepore, Nov. 27 '85	Nil	Weather—seasonable. State of <i>amun</i> crop good. Rice 18 to 24 seers per rupee.
	12 Rajshahye, „ 28 „	Nil	Weather—seasonable. Harvesting of <i>amun</i> paddy continues; also cutting of sugarcane. Prospects of <i>rubbee</i> crops good so far. Fever general, though not of a severe type. A slight outbreak of cholera in Nattore police station.
	13 Rungpore, „ 29 „	Nil	Weather—seasonable. Reaping of <i>amun</i> paddy has commenced. Wheat is being sown. Other standing crops doing well. Fever abating; public health generally good.
	14 Bogra, „ 28 „	Nil	Weather—rather warm for the end of November. A slight shock of earthquake was felt at 6.45 last night. State and prospects of crops continue good. Public health on the whole fair; but cholera in five villages has been reported.
	15 Pubna, „ 28 „	Nil	Weather—fine and getting cold; northerly wind. <i>Amun</i> is being cut. In Seraj-gunge it is likely to be a 12-anna crop. Winter crops doing well. Some fever and cholera.
DAKKA DIVISION.	16 Darjeeling, „ 28 „	Nil	Report not received.
	17 Julpigoree, „ 28 „	Nil	Weather—warmer than last week; mornings cold, but sun very hot in daytime; heavy dews. <i>Amun</i> crop is now being reaped in places, and a full harvest is expected. At Alipore rice is selling at Rs. 1.8 per maund, and 22 seers per rupee at Julpigoree. All other crops are good. Fever very prevalent.
	<i>Eastern Districts.</i>		
	18 Dacca, Nov. 28 '85	0.24	Weather—cold. Harvesting of <i>roachia</i> and <i>amun</i> paddy continues. Winter crops being sown. Prospects of crops good. Public health generally good.
	Munshigunge „ „	0.25	
	Naraingunge „ „	0.27	
	19 Furruckpore, „ 28 „	Nil	Weather—seasonable. <i>Amun</i> crop is being reaped. Prospects of winter crops fair. General health good; a few sporadic cases of cholera reported from Madaripore and Sadarpore.
CHITTAGONG DIVISION.	Madaripore „ „	0.43	
	20 Backergunge, „ 26 „	1.23	Weather—seasonable. Rain on two days during the week. It has caused some damage to late <i>amun</i> crop. General health fair; fever prevailing.
	21 Mymensingh, „ 27 „	Nil	Weather—mild and cloudy. Prospects of all crops good. Harvesting of winter rice begun.
	Attia „ „	0.39	
	22 Chittagong, Dec. 1 '85	Nil	Standing crops partly damaged by last week's storm. <i>Amun</i> being harvested. Prices rising. Public health good.
	23 Noakhally, Nov. 27 „	1.30	Cold weather has fairly set in. The recent rain has done some damage to winter crops, and has retarded the progress of the harvesting of paddy crop, which, however, has since been renewed. Paddy outturn average. Prospects of sugarcane fair. General health good.
CHITTAGONG DIVISION.	Fenny „ „	3.38	
	24 Tipperah „ 26 „	0.51	Weather—cloudy and threatening during the earlier portion of the week, then clear and cold. Crops in the north have suffered from the attacks of insects which have followed the rains. Paddy harvest is in full swing, and the return promises to be an average one.
	Brahmanbariah „ „	0.19	
	Chandpore „ „	0.30	
CHITTAGONG DIVISION.	25 Chittagong Hill „ 24 „	4.72	Weather—cloudy and rainy on the 19th, 20th, 21st and 22nd. Rain has done much good to mustard, tobacco, chillies and other cold-weather crops, and to late paddy crop.
	Tracta „ „		
CHITTAGONG DIVISION.	Hill Tipperah, „ 25 „	0.26	Weather—rather hot for the season. <i>Rubbee</i> crops promising. Prospects of <i>amun</i> paddy yet good. Chillies and tobacco crops to be replanted. Sugarcane doing

No.	District, and date of return.	Station at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BEHAR.			
PATNA DIVA.	26 Patna, Nov. 28 '85	Nil	Weather—mornings and evenings cool and days hot. Sowing of <i>rubbee</i> crops is almost finished. Gram, peas and all other crops are growing well. Cotton and castor look well. Prospects of poppy good. Public health good.
	27 Gya, " 28 "	Nil	Weather—cool and dry. Rice harvest continues; outturn generally favourable. All cold-weather crops doing well. Health good. Prices somewhat better than last year.
	28 Shahabad, " 28 "	Nil	Weather—seasonable. Harvesting of paddy progressing. <i>Rubbee</i> sowings nearly completed. Weather favourable for germination of poppy. The crop is, however, backward for the season, the larger proportion of sowings having only been completed during the last ten days. The area under poppy will be somewhat smaller than was expected owing to dry weather, which has necessitated irrigation.
	29 Durbhunga, " 28 "	Nil	Weather—seasonable. Harvesting of paddy going on. <i>Rubbee</i> sowings coming on well, but rain is urgently needed for this crop. <i>Aloos</i> and <i>Soothai</i> are being gathered. Price of rice falling. Cholera abating.
	30 Mosufferpore, " 28 "	Nil	Weather—normal. <i>Aghani</i> harvest commenced. <i>Rubbee</i> crops very promising. Poppy sowings in progress, and in some places the young plants are above ground; abundant moisture in the ground gives promise of an excellent poppy season.
	31 Varan, " 28 "	Nil	Weather—fair and clear; days warm for the time of the year, nights cool. <i>Aghani</i> harvest has commenced. <i>Rubbee</i> and poppy coming on well; irrigation going on where practicable. A fall of rain would do much good to <i>rubbee</i> and opium. Sporadic fever reported, otherwise public health good.
	32 Champaran, " 28 "	Nil	Weather—seasonable. Prospects of <i>aghani</i> rice crop continue good. Reaping commenced in some places. Sowing of poppy progressing satisfactorily. Prices of food-grains stationary. Public health fair.
BHAGULPUR DIVA.	33 Monghyr, Nov. 28 '85	Nil	Weather—seasonable. Rice being reaped. <i>Rubbee</i> sowings nearly completed, and where they have germinated promise well. Public health good. Prices stationary.
	34 Bhagulpore, " 28 "	Nil	Weather—seasonable. Paddy harvest has begun in uplands. Low land paddy good. <i>Rubbee</i> prospects good in the Sudder; elsewhere not so good owing to want of rain. Cholera decreasing. Prices falling. Rice 12 to 17 seers near the railway, 25 seers in Soop le, and 18½ in Banksa.
	35 Purneah, " 28 "	Nil	Weather—very fine. Late rice is being reaped. <i>Rubbee</i> promises very well. Cholera and fever still prevalent.
	36 Maidah, " 28 "	Nil	Weather—fine and cool. Winter rice is being harvested, yielding a full crop. <i>Kalai</i> is ripening with excellent prospects. <i>Rubbee</i> crops doing well. Common rice 17 to 22 seers per rupee. Public health good, expect some sporadic cholera in the north and middle of the district.
	37 Sonthal Pergha, " 28 "	Nil	Weather—seasonable. Paddy crop is being cut everywhere; outturn excellent. Cold-weather crops promising. General health good.
ORISSA.			
ORISSA DIVA.	38 Cuttack, Nov. 27 '85	Nil	Weather—clear; nights cold. <i>Sarad</i> rice ripening. Early <i>sarad</i> being reaped. <i>Rubbee</i> crops doing well. Common rice selling at 12 seers per rupee in town. Severe cholera in some parts of the Jajpur and Kendrapara sub-divisions, otherwise public health good.
	39 Pooree, " 26 "	Nil	Weather—seasonable. Late <i>sarad</i> rice is ripening. <i>Laghu sarad</i> is being harvested. <i>Rubbee</i> doing well. Lands are being ploughed for <i>dalia</i> crop. Relief works are going on in the Chikra tracts which have suffered loss of crops from drought. Common rice selling at an average of 17 seers 10 chittacks per rupee in the Sudder sub-division, and 15 seers 3 chittacks in the Khordha sub-division. Bathing festival over, and cholera disappearing with departure of pilgrims. Public health again fair.
	40 Balasore, " 27 "	Nil	Weather—cool and fine. Prospects of all crops continue good. Cholera still prevails in parts of Bhanuagar thana; otherwise public health good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
	Hazaribaga, Nov. 27 '85	Nil	Weather—clear and cold. Harvesting of paddy continues. Prospects of <i>rubbee</i> crops generally good. In some places rain is much wanted. Nearly three-fourths of the poppy sowings have been completed, but in some parts scarcity of water is complained of. General health good.
	42 Loharabaga, " 28 "	Nil	Weather—cold. Harvesting of winter paddy still continues. Prospects of <i>rubbee</i> crops fair. Prices steady. Public health generally good.
	43 Singhbhum, " 27 "	Nil	Weather—bright and clear, and getting cold. Rice being harvested with excellent results. <i>Rubbee</i> prospects good. Fever and cattle-disease reported from Seraikela, otherwise general health good.
	44 Manbhum, " 28 "	Nil	Weather—fine and cool. Reaping of paddy continues. Prospects of cold-weather crops fair. Coarse new rice quoted this day (Friday, 28th) in the Purulia market at 23 seers per rupee. Public health good.

Published for general information.

A. P. MacDONNELL,
Secretary to the Govt. of Bengal.

The mean pressure of the seven days	inches.
The average pressure of the corresponding period for 24 years, S. G.'s Office	29.986
The total number of hours of bright sunshine	hours.
The maximum possible number of hours of sunshine	62.7
				76.2
				°
The mean temperature of the seven days	69.7
The average temperature of the corresponding period for 24 years, S. G.'s Office	71.7
The extreme variation of temperature	25.3
The maximum temperature	82.4
				Miles.
The highest velocity of the wind in one hour	14
				lbs.
The highest pressure of wind on one square foot	1
				%.
The mean relative humidity	73
The average relative humidity of the corresponding period for 24 years, S. G.'s Office	71

The total fall of rain from 22nd to 28th November 1885 ... 0.02
The average fall of the corresponding period for 24 years, S. G.'s Office... 0.01
The total fall from 1st January to 28th November 1885 ... 65.83
The average fall of the corresponding period for 24 years, S. G.'s Office ... 65.15
The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph
The maximum and minimum temperatures are obtained from self-registering thermometers. All thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.
The barometer readings are corrected approximately to those of the standard Newman's No. formerly at the Surveyor-General's Office.
The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.
The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.
The mouth of the rain-gauge is one foot above the ground.
o overcast, d drizzling rain, Δ dew.

MEMORANDA.

THE returns from the principal Municipalities in Bengal for the week ending 14th November 1885 disclose the following results :—

1. That the birth-rate stood at 26·5 per 1,000 of population, against the same proportion in the preceding week ending 7th November, and the death-rate at 41·6 per 1,000, as opposed to very nearly the same proportion, viz. 41·0 per 1,000.

2. That the Municipalities which returned the highest birth and death-rates were :—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Bhagulpore	53·4	Puri	83·9
Jessore	49·0	Gya	75·8
Bali	42·1	Bhagulpore	62·5
Naraingunge	41·4	Purneah	62·3
Durbhanga	40·9	Jessore	61·2
Midnapore	32·5	Suburbs of Calcutta	51·7
Patna	32·1	Dacca	47·1
Purneah	31·2	Serampore	47·1
			Burdwan	41·2
			Durbhanga	42·6
			Naraingunge	41·4
			Patna	39·2
			Howrah	34·9
			Comillah	34·6
			Hughli	33·6
			Chittagong	32·8
			Monghyr	31·6

3. That the mortality from the principal diseases specified in the table appended to this memoranda exhibits no noticeable differences in comparison with the death-rates from the same diseases of the preceding week :—

			Ratio per mille during the weeks ending—	
			14th November 1885.	7th November 1885.
Cholera	2·4	2·3
Small-pox	·1
Fever	20·3	20·4
Bowel-complaints	7·9	7·7
Injury	·4	·2
Other causes	10·5	10·3

4. That, excluding small-pox, from which no casualty was reported, and injury, which proved nowhere severe, the rest of the death-causes above indicated caused the highest mortality in the following Municipalities :—

Cholera.		Fever.		Bowel-Complaints.		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri ...	33·6	Purneah ...	55·4	Serampore ...	15·7	Puri ...	25·2
Gya ...	7·5	Jessore ...	49·0	Hughli ...	13·4	Dacca ...	23·4
Arrah ...	4·8	Gya ...	45·0	Bhagulpore ...	12·7	Bhagulpore ...	15·4
Howrah ...	4·6	Comillah ...	34·6	Suburbs of Calcutta ...	12·2	Suburbs of Calcutta ...	14·9
Durbhanga ...	3·1	Bhagulpore ...	32·6	Patna ...	10·7	Gya ...	13·7
Suburbs of Calcutta ...	2·9	Burdwan ...	30·5			Durbhanga ...	10·2
		Serampore ...	27·5			Patna ...	10·0
		Bali ...	24·6				
		Suburbs of Calcutta ...	21·7				
		Monghyr ...	20·8				

5. That the death-rates in relation to Sex, Class and Age stand as shown below :—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	43·9	Christians	34·8	Under 1 year	...	304·7
Females	39·0	Hindus	43·2	1 and under 5 years	...	64·5
Ratio of male deaths to every 100 female deaths	127	Mahomedans	38·1	5 " " 10 " "	...	24·2
			Budhists	24·2	10 " " 15 " "	...	18·1
			Other classes	36·4	15 " " 20 " "	...	24·6
						20 " " 30 " "	...	23·6
						30 " " 40 " "	...	30·3
						40 " " 50 " "	...	28·2
						50 " " 60 " "	...	49·2
						60 years and upwards	...	104·0

INCREASE.						Tons.
Edible grain	298
This increase is due to high rate consequent on the floods in the Moorshedabad district on account of the breakage of the Laltinkuri embankment.						
Piece-goods	74
This increase is due to high demand for Doorga Pujah festival in this month.						
Sundries	50
This increase is due to high demand for Doorga Pujah festival in this month.						
Coal	112
This increase is due to merchants not laying in stock during rainy season as they used to do before.						

NALHATI, the 28th November 1885.

R. G. MOOKERJEE, Manager.

RESOLUTION REGARDING THE APPOINTMENT OF A COMMITTEE TO ENQUIRE INTO EDUCATIONAL ENDOWMENTS FOUNDED BY MUHAMMADANS IN THESE PROVINCES.

GENERAL DEPARTMENT.—EDUCATION.

Calcutta, the 8th December 1885.

RESOLUTION.

Read again—

A memorial from the National Mahomedan Association on the position and claims of the Mahomedan community in British India.

A letter from the Government of Bengal, No. 481T—G, dated 14th October 1882, to the Government of India, reporting upon the allegations and prayers of the memorial.

The Report of the Education Commission, chapter IX, section 2, on the subject of Mahomedan education.

The letter No. 2285T—G, dated the 25th September 1884, from the Government of Bengal to the Government of India, reviewing the recommendations of the Education Commission on the subject of Mahomedan education.

Read—

The Resolution, dated 15th July 1885, recorded by the Government of India, in the Home Department, in reference to the Memorial of the National Mahomedan Association.

In 1882 the National Mahomedan Association addressed a memorial to His Excellency the Governor-General in Council, calling attention to the

decayed condition of the Mahomedan community, and making suggestions for its improvement. In the letter of 14th October 1882, cited in the preamble, the Lieutenant-Governor discussed the questions raised by the Memorial, and made certain recommendations with reference to the memorialists' prayers so far as they concerned these Provinces. The Memorial was subsequently discussed by the Education Commission, whose proposals regarding the general question of Mahomedan education were considered by the Lieutenant-Governor in the letter of the 25th September 1884 cited in the preamble. In the Resolution of the 15th July 1885, recorded in the Home Department, His Excellency the Governor-General in Council has now reviewed the correspondence referred to above, as well as the similar correspondence which has passed on the subject of the Memorial with other Governments. His Excellency finds that there is a general agreement that, owing to the past inability or unwillingness of the Mahomedan community to take advantage of the State system of education, Mahomedans are at the present time not always able to contend on equal terms with their Hindu fellow-subjects for State employment, or in the liberal professions. Happily, however, there are now not wanting signs of a change of temperament on this subject among the Mahomedan community generally, while some of their leaders have, through the instrumentality of education, reached high positions in the public service and in professional life, and are doing excellent work. Progress is thus being made, and Government is anxious that all that can reasonably be done, having regard to the legitimate claims of other classes, should be done to maintain and stimulate that progress.

2. In the report of the Education Committee, the proposal to give special aid to Mahomedan schools was made, and in the review of that report recorded by this Government, the proposal was favourably received. It has not hitherto been found possible, owing to financial pressure, to do as much as could have been wished in furtherance of the policy which, on this subject, the Lieutenant-Governor has approved; but as funds become available, an effort will be made in that direction. Meanwhile, Sir Rivers Thompson gladly welcomes the proposal which the Government of India, in deference to the wishes of the National Mahomedan Association, now makes in the 19th paragraph of the Resolution cited in the preamble to appoint a Committee to ascertain the extent to which educational endowments have been founded by charitable and public-spirited Mahomedans throughout these Provinces. It is a fact that the progress of education among the Hindu community of Bengal is largely indebted to private liberality; and although among Mahomedans there are fewer wealthy persons than among Hindus, it is probable that the number of those who have devoted money to public purposes, according to their means, are not, comparatively speaking, fewer in one community than in the other. Educational endowments, when of small value, are apt to be overlooked; and when they consist of immoveable property, they are apt to be diverted from the donor's intention. Much good may therefore result from a Committee appointed to enquire in the first place into the number of such educational endowments, their character and the manner in which the proceeds are applied. It may be possible that, when information on these points is collected, administrative arrangements or legislative action may be devised, whereby, in accordance with the wishes of the representatives of the Mahomedan community, the funds of these endowments may be applied more carefully than at present, and more in accordance with the wishes and intentions of the donors.

3. It is stated in the Resolution of the Government of India that Mahomedan endowments are usually of religious or quasi-religious character, and this statement, in the Lieutenant-Governor's opinion, is generally in accordance with the facts in Bengal. With endowments of a religious character, the enquiry which it is now proposed to set on foot will have no concern; but with endowments intended by the founder to be appropriated to educational as well as to purely religious uses, the case may be different. Here the Committee of Enquiry will be entitled to distinguish between the religious and secular aspects of such funds, and ascertain whether the latter aspects are receiving from the trustee of the endowment the attention they deserved.

4. An important matter is the way in which the Committee of Enquiry should proceed to work. No doubt much assistance will be given by District

Officers, and much information will be obtained from the archives of Government to which access will be permitted; but something more than this will be necessary if full information is to be collected. Many, if not most, of the Mahomedan endowments are not brought upon the records of Government, and therefore it will be desirable for the Mahomedan community in each district to take the matter in hand, and from the resources of their local knowledge supplement the defects of the public records. The Lieutenant-Governor therefore desires that in communication with, and acting on the advice of the Committee, the Collector of each district, in which minute enquiries are desirable, should associate with himself the chief Mahomedan gentlemen resident in the district and avail himself of their knowledge in gathering the requisite information. It will be for the National Mahomedan Association, at whose instance the enquiry is being undertaken, to place themselves in communication with their local branches, and to do what in them lies to stimulate their correspondents into activity on this point. The Secretary of the Committee should also visit the chief centres of Mahomedanism in the mofussil, and by his influence and advice help in forming these Sub-Committees, on whose activity the success of this enquiry will mainly depend.

5. When the facts regarding the extent and character of the endowments in question have been ascertained, the duty of the Committee will then be to consider how far they point to the necessity for action, executive or legislative, to provide that the endowment funds may be most usefully employed. In considering this point, it is desirable that the Committee should bear in mind that the Government is anxious to hold itself aloof from the management of educational endowments not directly entrusted to its charge by the testator or donor. Should, therefore, the Committee consider, with reference to the facts that may come before them, that a change in the management of individual funds, or a modification of the existing law, is desirable, it is requested that their recommendations will take due regard of the possibility of an extension to educational endowments of the principle of the Act of 1863, whereby competent members of the Mahomedan community are made chargeable with the control of religious endowments.

6. For the purposes, therefore, of carrying into effect the objects stated in the preceding remarks, the Lieutenant-Governor appoints the Hon'ble G. C. Paul, C.I.E., Advocate-General, who has consented to serve, to be President of the Committee, and associates with him as members Mr. Amir Ali, Barrister-at-Law, Nawab Abdul Lutif, Khan Bahadoor, C.I.E., Nawab Mir Mahomed Ally, and Mr. Philip Nolan, C.S.; the last-named gentleman to act as Secretary to the Committee as well as member. It is the desire of the Government of India that Committees appointed by Local Governments should communicate with each other in order thereby to assure, as far as practicable, uniformity of action of design. It is desirable, therefore, that the Committee nominated above should place itself in communication with Committees formed in other Provinces.

7. A sum of Rs. 100 per month for the Committee's office establishment and contingencies is sanctioned, and it is requested that the Committee's report be submitted to Government within six months from this date.

By order of the Lieutenant-Governor of Bengal,

A. P. MACDONNELL,

Secretary to the Government of Bengal.

**REPORT ON THE STATE OF THE SALT MARKET FOR THE
SECOND QUARTER OF 1885-86.**

No. 796B, dated Calcutta, the 26th November 1885.

From—C. A. SAMUELLS, Esq., Officiating Secretary to the Board of Revenue,
Lower Provinces,

To—The Secretary to the Government of Bengal, Financial Department.

I AM directed to submit the following report on the state of the salt
market for the second quarter of 1885-86, com-
prising the months of July, August, and Septem-
ber 1885.

SALT.
H. A. COCKRELL, Esq., C.S.I.

2. The quantity of salt of every description cleared during the quarter under report amounted to 28,54,562 maunds 18 seers 14 chittacks, against 21,29,421 maunds 14 seers 9 chittacks in the previous quarter, and 26,41,346 maunds 13 seers 11 chittacks in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 52,41,617-8, against Rs. 41,03,558-8 in the previous quarter and Rs. 50,17,357 in the corresponding quarter of the previous year.

3. The quantity of excise salt sold in the districts of Cuttack, Pooree, Balasore, and 24-Pergunnahs during the quarter under review from the stock of the different seasons' manufacture, and the quantities which remained in store at the close of the quarter are shown in Table I.

8. The despatches of salt from Calcutta by water and the three railways passing the several salt pass stations into the interior of the country, both east and west of the river Hooghly, during the quarter under review and the corresponding quarters of the previous two years are shown in Table V.

TABLE V.

PERIOD.	Fid Balikhall.	Fid Sankrail.	Fid Gowakhally.	Fid Kidderpore.	Fid Balliaghatta.	* Fid Ruthollah Ghat.	By the East Indian Railway.	By the East- ern Bengal or South- Eastern Rail- ways, or via Chitpore.

9. The quantity of salt despatched by the East Indian Railway to stations beyond Buxar during the quarter under review amounted to 1,02,723 maunds 20 seers, as noted in the margin, against 88,050 maunds 30 seers in the previous quarter, and 82,126 maunds 10 seers in the corresponding quarter of the previous year.

10. The shipments of Liverpool salt for the Port of Calcutta according to published market reports were as follows:—

						Tons.
July	22,120
August	39,020
September	15,740
Total	76,880

No shipments were reported during the quarter under review for the Port of Chittagong.

11. Table VI shows the market prices per 100 maunds of Liverpool and other descriptions of salt at the close of each fortnight during the quarter as compared with those obtaining during the same period last year.

TABLE VI.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 5th December 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
SUBDIVISION.	1 Burdwan, Dec. 5 '85	Nil	Weather—seasonable. <i>Amun</i> outturn good. <i>Rubbee</i> crops doing well. Price of rice 12 to 20 seers per rupee. Health of district fair.
	2 Bankoora, „ 5 „	Nil	Weather—fine, clear and seasonably cold. Gathering of winter paddy briskly going on all over the district. Winter crops looking well everywhere. Prices remarkably low, especially in the late distressed tracts. General health satisfactory.
	3 Beerbhoom, „ 5 „	Nil	Weather—fine. <i>Amun</i> crop is being harvested. Cultivation of <i>rubbee</i> crops nearly completed. Prices falling. Public health satisfactory.
	4 Midnapore, „ 5 „	Nil	Weather—seasonable. Harvesting continuing in all quarters. Prospects of crops good except in the flooded tracts and thanas Panchkura, Tumlook, Pataspore, and Bhugwanpore. A few sporadic cases of cholera. Public health fair.
	5 Hooghly, „ 5 „	Nil	Weather—seasonable. Prospects of <i>amun</i> and <i>rubbee</i> satisfactory. Harvesting of <i>amun</i> commenced. Public health fair, but a good deal of fever about.
	Howrah, „ 7 „	Nil	Weather—fine; cool. What is left of <i>amun</i> paddy is being reaped. Winter crops and vegetables doing fairly well. Sugarcane bad. <i>Boro</i> paddy being transplanted.
<i>Central Districts.</i>			
PRESIDENCY DIVISION.	6 24-Pergha, Dec. 7 '85	Nil	Weather—seasonable. Prospects of <i>amun</i> , except on low lands, good. <i>Rubbee</i> crops doing well. Public health is generally good, though stray cases of cholera reported from Diamond Harbour sub-division.
	7 Nuddea, „ 5 „	Nil	Weather—seasonable. Prospects of the winter crops everywhere excellent. Outturn of rice crop cannot yet be accurately estimated. Public health generally good, but cholera still reported from several thanas in Koshtoa sub-division.
	8 Khoolna, „ 5 „	Nil	Weather—bright and cool. Cutting of early <i>amun</i> paddy continues. Mustard is in flower and other winter crops coming up. Some fever at Khoolna.
	9 Jessore, „ 5 „	Nil	Weather—seasonable. Harvesting of <i>amun</i> crop has not yet been completed. Prospects good. Price of new rice has decreased. Prospects of <i>rubbee</i> crops continue favourable. Fever has abated; cholera reported from Jhenidah sub-division.
	10 Moorshedabad, „ 5 „	Nil	Weather—seasonable. <i>Amun</i> rice being reaped; crop good. <i>Kalai</i> will be harvested soon. It is an excellent crop. Prospects of all cold-weather crops good. Public health good. Common rice 16 to 20 seers per rupee.
	11 Dinagepore, Dec. 4 '85	Nil	Weather—seasonable. <i>Amun</i> crop being harvested. Prospects of <i>rubbee</i> crops good.
RAJSHAHY DIVISION.	12 Rajshahye, „ 5 „	Nil	Weather—seasonable. Harvesting of <i>amun</i> paddy going on vigorously; also cutting of sugarcane. Prospects of <i>rubbee</i> crops good. Fever general. Rice varies in price from 13 seers per rupee at Baruaon to 27 seers at Singra.
	13 Rungpore „ 5 „	Nil	Weather—seasonable. Harvesting of <i>amun</i> going on. Prospects of mustard and tobacco good. Sugarcane being cut. Land being prepared for the sowing of <i>aus</i> . Cholera has appeared, but fever has abated.
	14 Bogra, „ 5 „	Nil	Weather—now cold and bracing. Heavy dew at night. State and prospects of crops continue good. Public health fair, except cholera in certain villages.
	15 Pubna, „ 5 „	Nil	Weather—fine and much colder. <i>Amun</i> being cut; outturn favourably reported on. All winter crops doing well. Fever bad in Serajgunge Municipality.
	16 Darjeeling, „ 5 „	Nil	Weather—bright and cold with frosty nights. Prospects of crops good. Public health good.
	17 Julpigoree, „ 5 „	Nil	Weather—cold and seasonable. Reaping of <i>kaimanti</i> rice general all over the district; outturn satisfactory. Progress of cold-weather crops good. Common rice sells at 22 seers per rupee at Julpigoree. Cattle-disease reported from Fallacotta tehsil and Julpigoree; from the latter two cases of cholera reported.
<i>Eastern Districts.</i>			
DACCA DIVISION.	18 Dacca, Dec. 5 '85	Nil	Weather seasonably cold. <i>Amun</i> paddy being cut. Winter crops doing well. Prospects of crops good. Sporadic cholera reported from parts of the district.
	19 Farreedpore, „ 5 „	Nil	Weather—cold. Harvesting of <i>amun</i> crop continues. Winter crops promise well. General health fair; cases of fever here and there.
	20 Backergunge, „ 3 „	Nil	Weather—seasonable. Paddy ripening. Public health good.
	21 Mymensingh, „ 4 „	Nil	Weather—cooler; foggy mornings. Harvesting of rice going on. Prospects of all crops good.
CHITTAGONG DIVISION.	22 Chittagong, Dec. 8 '85	Nil	Weather—seasonable. Prospects of crops generally fair. Harvesting of <i>amun</i> continues. Prices steady. Public health good.
	23 Noakhali, „ 4 „	Nil	Weather—seasonable. Winter rice crop being harvested; outturn good. Late rain has done a little damage. Betel-nuts coming in. Cold-weather crops being sown and planted. A few cases of cholera; general health good.
	24 Tipperah, „ 3 „	Nil	Fine, clear weather with cold nights. <i>Amun</i> rice harvest progressing; produce generally good, but heavy loss from excessive rainfall reported from south of district. Cholera has made its appearance; public health otherwise good.
	25 Chittagong Hill Tracts, „ 1 „	Nil	Weather—cool with foggy mornings; cloudy on the 30th ultimo. Mustard and other cold-weather crops doing well. Plough-paddy ripening.
	Hill Tipperah, „ 2 „	Nil	Weather—unsettled; occasionally cloudy. <i>Amun</i> paddy being reaped. Prospects of pulses and sugarcane fair. Cotton and other <i>foom</i> crops still being gathered. Public health good.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BEHAR.			
PATNA DIV.	26 Patna, Dec. 5 '85	Nil	Weather—cold. Harvesting of <i>jowar</i> and paddy has commenced. Poppy and <i>rubbee</i> crops growing well; mustard flowering. Cholera reported from Dinapore sub-division.
	27 Gaya, „ 5 „	Nil	Weather—seasonable. Prospects of all cold-weather crops, including opium good. Rice harvest turning out better than was expected. Health good. Prices unchanged.
	28 Shahabad, „ 5 „	Nil	Weather—seasonable. Harvesting of paddy continues; outturn good. Prospects of <i>rubbee</i> crops favourable. Poppy sowings completed and germinating, but crop backward owing to dry weather. Public health improving, but cholera still lingers in Basserain sub-division.
	29 Durbhunga, „ 5 „	Nil	Weather—seasonable. Harvesting of paddy in progress. Prospects of <i>rubbee</i> continue favourable, but rain much wanted. Tobacco and poppy look very promising. Prices falling. Public health generally good.
	30 Mozufferpore, „ 5 „	Nil	Weather—seasonable. Reaping of paddy in progress. <i>Rubbee</i> crops doing very well. Poppy sowings still continue; early sown seeds germinated fairly and the prospect is excellent. Public health good.
	31 Saran, „ 5 „	Nil	Weather—fair and cool. Rice harvest going on; outturn generally favourable. All cold-weather crops doing well. A fall of rain will be very beneficial. <i>Aloos</i> and <i>Soothni</i> being gathered. Prices falling. Public health on the whole good.
	32 Chumparan „ 5 „	Nil	Weather—seasonable. Prospects of <i>aghani</i> crop continue good; reaping commenced in some places. Poppy sowings progressing satisfactorily. Prices of food-grains stationary. Public health fair.
BHAGULPUR DIV.	33 Monghyr, Dec. 5 '85	Nil	Weather—seasonable. Rice harvest in progress with average from an 8-anna to a 12-anna crop. <i>Rubbee</i> sowings promise well; a little rain would benefit them. Prices falling. Public health good.
	34 Bhagulpore, „ 5 „	Nil	Weather—seasonable. Rice harvest going on. The yield on uplands is light. Low land crop is good. Mustard and linseed have suffered for want of rain. Other cold-weather crops doing well.
	35 Purneah „ 5 „	Nil	Weather—seasonable. Crops all good. Cholera abating except in Balrampur thana.
	36 Maldah „ 5 „	Nil	Weather—fine and cool. Harvesting of winter rice going on, yielding a full crop. Prospects of standing crops good. Common rice 17 to 22 seers per rupee. Public health good; a few cases of cholera reported.
	37 Sonthal Pergas „ 5 „	Nil	Weather—cold. Sky rather cloudy for two or three days during the week. Paddy crop being harvested; outturn excellent. <i>Rubbee</i> prospects very good. General health good.
ORISSA.			
ORISSA DIV.	38 Cuttack, Dec. 4 '85	Nil	Weather—very cold. Early <i>sarad</i> rice being reaped. Late <i>sarad</i> ripening. Sugarcane being cut. <i>Rubbee</i> crops doing well. Common rice selling at 18 seers per rupee in town. In the interior price of rice ranges from 16 to 20 seers per rupee. Cases of cholera still reported from Jajpur sub-division; otherwise public health good.
	39 Pooree, „ 3 „	Nil	Weather—seasonable. Late <i>sarad</i> rice ripening. <i>Laghu sarad</i> being harvested. <i>Rubbee</i> crops progressing well. <i>Dalua</i> crop being sown. Relief works going on in the Chilka tracts which have suffered loss of crops from drought. Common rice selling at an average of 18 seers 11 chittacks per rupee in the Sudder sub-division, and 19 seers 12 chittacks in the Khoorda sub-division. A few cases of cholera reported from the interior.
	40 Balasore, „ 4 „	Nil	Weather—bright and cold. <i>Rubbee</i> crops doing well. Harvesting of paddy going on actively. A few cases of cholera reported from Dhamusgar and Singla Chuklas. Public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh, Dec. 5 '85	Nil	Weather—clear and cold. Rice harvest still continues with good outturn. <i>Rubbee</i> crops promise well. Poppy sowings have been completed and nearly half of the crop has germinated well. General health good.
42	Loharagga, „ 5 „	Nil	Weather—cold. Harvesting of winter paddy continues. <i>Rubbee</i> sowing over; rain wanted here and there. Fever in places. Public health otherwise good.
43	Singbhoom, „ 4 „	Nil	Weather—bright and cold. Harvesting of rice still continues. Prospects of <i>rubbee</i> excellent. Prices easy. General health good.
44	Manbhoom, „ 5 „	Nil	Weather—fine and cool. Harvesting of paddy going on actively. Prospects of <i>rubbee</i> crops fair. Coarse rice quoted at Paralia market this day (5th instant) at 26 seers per rupee. Public health good.

Published for general information.

METEOROLOGICAL OFFICE, BENGAL; ALEXANDER PEDLER,
The 7th December 1885. Offg. Meteorological Reporter to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of November 1885.

	Inches.	Date.	Hour.
The mean pressure of the month	29.983		
The average pressure of November from 24 years' registers ...	29.970		
The highest pressure in the month	30.151	29th	10h.
The lowest pressure in the month	29.797	22nd	16h.
The range of pressure	0.354		
The total number of hours of bright sunshine during the month	Hours. 229.5		
The maximum possible number of hours of sunshine ...	330.8		
	°		
The mean temperature of the month	72.2		
The average temperature of November from 24 years' registers	74.8		
The highest temperature in the month	84.5	6th	
The lowest temperature in the month	57.1	27th	
The range of temperature during the month	27.4		
The mean daily range of temperature	16.6		
The greatest range of temperature in one day	21.2	27th	
	Per cent.		
The mean humidity of the month	77		
The average humidity of November from 24 years' registers...	72		
	Inches.		
The mean vapour tension of the month	0.600		
The average vapour tension of November from 9 years' registers	0.616		
The mean cloud proportion of the month	3.19		
The average cloud proportion of November from 8 years' registers	2.50		
	Inches.		
The total rainfall of the month	0.06		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	0.04		
The average fall of November from 48 years' registers ...	0.65		
The greatest fall in 24 hours	0.04	3rd	
	Days.		
The number of rainy days in the month	2		
The average number of rainy days in November from 24 years' registers	2		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	132.2		
The mean difference of sun and air temperatures	50.9		
The greatest sun temperature	145.9	8th	
The greatest excess of sun over air temperature	62.3	8th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	56.7		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	8.0		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	12.3	26th	
	Miles.		
The mean movement of the wind per day	77.1		
The greatest movement of the wind in one day	214.0	23rd	
The greatest movement of the wind in one hour	14.0	23rd noon to 1 P.M.	
The number of hours with winds from each of the 8 points—			

N. 302, NE. 105, E. 44, SE. 12, S. 0, SW. 9, W. 59, NW. 159, Calm 30.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of former years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 1.6 lower; and, finally, the thermometer, which furnished the record of temperature at the Surveyor-General's Office during 30 years and upwards, is found to read 0.6 higher than the New standard thermometer, which is the standard of reference at the present Observatory.

N.B.—In the monthly abstract for October 1885, read 5.24 inches instead of 3.57 inches as the total rainfall indicated by Beckley's self-registering rain-gauge.

**Results of the Meteorological Observations taken at the Alipore Observatory from
29th November to 5th December 1885.**

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, S. G.'s Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ...

The total fall of rain from 29th November to 5th December 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The total fall from 1st January to 5th December 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 1 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph. The mouth of the rain-gauge is one foot above the ground.

— fog, &c. &c.

The mean relative humidity ... 66

The total fall of rain from 29th November to 5th December 1885 ... Nil

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ;
Calcutta, the 7th December 1885.

HENRY F. BLANFORD,
Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE chief features to be deduced from the vital statistics of the principal Municipalities in Bengal for the week ending 21st November 1885, as presented in the statement appended to this Memoranda, are the following :—

1. That births and deaths were registered in these Municipalities at the rates, respectively, of 27·6 and 39·1 per 1,000 of population as opposed to 26·5 and 41·6 per 1,000, respectively, during the preceding week ending 14th November, indicating improvement in the registration of births against retrogression in that of deaths.

2. That the highest birth and death-rates were returned by the following Municipalities :—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Naraingunge	62·1	Puri	125·9
Serampore	47·1	Serampore	56·9
Gya	43·7	Purneah	55·4
Bhagulpore	42·5	Bhagulpore	51·3
Arrah	40·7	Naraingunge	53·8
Burdwan	39·7	Gya	53·3
Beaulcah	39·4	Suburbs of Calcutta	49·6
Patna	34·4	Dacca	40·7
Dacca	33·1	Patna	42·2
			Midnapore	37·2
			Hughli	34·8
			Arrah	32·3
			Howrah	32·1
			Comillah	30·8

3. That the mortality from the several death-causes was as follows, in comparison with that in the preceding week :—

				Ratio per mille during the weeks ending—	
				21st November 1885.	14th November 1885.
Cholera	3·4	2·4
Small-pox
Fever	19·0	20·3
Bowel-complaints	6·7	7·9
Injury	·4	·1
Other causes	9·6	10·5

The above figures indicate that there was an enhancement in the death-rate from cholera with a diminution in those from fever, bowel-complaints and the maladies classed under the head of "Other causes."

4. That, excluding small-pox, from which no death was reported, injury, the casualties from which were nowhere noticeably large, and bowel-complaints, which proved conspicuously fatal only in the Serampore and Patna towns, viz. at the rates of 13·7 and 12·3 per 1,000 of their populations, respectively, the rest of the diseases above specified caused the highest mortality in the following Municipalities :—

Cholera.		Fever.		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri ...	60·8	Purneah ...	52·9	Puri ...	29·4
Midnapore ...	9·3	Serampore ...	33·4	Gya ...	20·4
Howrah ...	6·9	Bhagulpore ...	32·6	Kishuaghur ...	17·0
Suburbs of Calcutta ...	5·6	Puri ...	27·3	Dacca ...	16·8
		Comillah ...	27·0	Bhagulpore ...	11·8
		Arrah ...	26·3	Suburbs of Calcutta ...	11·1
		Naraingunge ...	24·8		
		Suburbs of Calcutta ...	21·2		

5. That the mortality referable to Sex, Class and Age stands as follows :—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males ...	40·9	Christians ...	21·7	Under 1 year	283·6
Females ...	37·1	Hindus ...	40·8	1 and under 5 years	35·5
Ratio of male deaths to every 100 female deaths ...	125	Mahomedans ...	36·1	5 " " 10 " "	24·2
				10 " " 15 " "	14·5
				15 " " 20 " "	20·7
				20 " " 30 " "	26·5
				30 " " 40 " "	27·3
				40 " " 50 " "	28·5
				50 " " 60 " "	44·8
				60 years and upwards	104·0

B. LIDDERDALE, M.D., Deputy Surgeon-General,

The 7th December 1885.

Sanitary Commissioner for Bengal.

GENERAL REMARKS AND EXPLANATIONS.

THE traffic carried during the month under review shows a falling off in 7 out of the 18 heads into which it is divided, the net decrease, compared with the corresponding period of last year, being 785'74 tons. The two principal causes which have brought about this unsatisfactory result are.

1st.—The breaks on the Eastern Bengal State Railway resulting in the suspension of through traffic for six days of the month.

2nd.—The silting of the Ganges. A drawback which has necessitated the abandonment of the old and short Sara-Damukdea route in favour of a long lead *via* Kushtia.

INCREASES.

Food-grains	2,018'97 tons.
This satisfactory result is due to a large traffic having been done locally in paddy.					
Ginger	89'49 tons.
There has been a steady increase in this commodity due to a good crop and fair demand for export.					
Miscellaneous	682'35 tons.
A large traffic in timber has contributed to this increase.					
Salt	985'41 tons.
The check given to despatches under this head during the last month on account of breaks on the Eastern Bengal State Railway will explain this large increase.					
Tea	499'07 tons.
Prices and demand both continue to be good in Calcutta.					
Tobacco	385'63 tons.
The continued increase under this head is due to a demand for export.					

DECREASES.

Ale	21'60 tons.
Gunny bags	388'97 "
Jute	2,357'88 "
Piece-goods	45'41 "
Railway material	2,601'48 "
Seed	18'04 "
Sugar	13'78 "

All the principal decreases noted above are mainly due to the two cases assigned above, excepting railway material, the large falling off in which is due to less coal having been carried for the Locomotive Department, and no material being sent forward for the Assam-Bihar Railway.

C. J. KENNEDY, *Traffic Superintendent.*

TRAFFIC SUPERINTENDENT'S OFFICE, Saidpur, the 23rd November 1885.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE CALCUTTA MUNICIPALITY FOR 1884-85.

MUNICIPAL DEPARTMENT.—MUNICIPAL

Calcutta, the 24th November 1885.

RESOLUTION.

READ—

The Administration Report of the Calcutta Municipality for 1884-85.

Read again—

The Report for 1883-84, and the Resolution recorded upon it.

Although the Chairman's report for the year 1884-85 is dated the 6th July, and the Engineer's report, which forms an appendix to it, is dated the 16th idem, the complete Administration Report was not submitted to Government until the 25th September. The reason assigned for this was the delay in receipt of the Auditor's Report on the Municipal and Police accounts caused by the absence of that officer from Calcutta on duty. These accounts were not received by the Government until October.

and has been so thoroughly reviewed, both by this Government and the Government of India in recent letters and resolutions, that the Lieutenant-Governor considers any lengthened discussion here of the same matters unnecessary. In this Resolution he will confine himself to noticing briefly the figures shown by the accounts and some points in the Administration Report not elsewhere disposed of.

3. Twenty-four general meetings were held by the Commissioners during the year, of which 10 were special general meetings, 3 were quarterly, and 6 were special meetings. Of Standing Committees there were 120 meetings, and of Special Committees 22 meetings. The Town Council met 49 times, the Water-supply Extension Committee 9 times, the Bustee and Tank Committee 20 times, the Market Committee 9 times, and the Sanitary Committee 3 times. The total number of attendances at meetings amounted to 2,116 out of 4,520, the maximum number possible.

4. The Town Council are said to have dealt with a large number of matters of varying degrees of importance. Among others were the arrangements made for the repayment of the debentures of 1864, the carrying out of miscellaneous improvements in the town, chiefly consisting of the extension and widening of roads, the steps taken to provide more commodious hackney carriages, presentation of addresses to Lord Ripon on the eve of his departure from India, and to Lord Dufferin on his arrival in Calcutta, provision of additional establishment for extending vaccination operations owing to the prevalence of small-pox, and the permanent appointment of an officer for the inspection of articles of food and drink.

5. At the end of 1883-84 the total debt of the Corporation amounted to—

	Rs.
Debenture loans	80,47,900
Consolidated loan from Government	71,07,195
Total	1,51,55,095

Against the debenture loans the Commissioners had a reserve fund of the nominal value of Rs. 25,59,385. During the year they borrowed Rs. 15,00,000 by debentures bearing interest at 5 per cent. for the extension of the drainage and water-works, and a temporary loan of Rs. 5,00,000, without interest, was obtained from Government.

6. The following statement compares the income of the municipality under the three ordinary revenue funds during 1884-85 and 1883-84:—

General Fund—		1883-84.	1884-85.
		Rs.	Rs.
House-rate	9,72,275	9,99,552
Taxes	4,15,360	4,09,170
Fees	6,288	4,923
Fines and penalties	21,329	25,022
Road Department receipts	37,679	43,134
Street-watering do.	143	40
Conservancy do.	42,489	40,163
Municipal Railway do.	4,710	296
New Drainage do.	9,837	9,277
Night-soil Department	2,19,718	2,18,317
Slaughter-house receipts	42,389	40,395
Municipal market do.	1,22,368	1,27,920
Hospital and vaccination fees	381	1,097
Rents	34,958	22,534
Miscellaneous	17,836	13,066
Total	19,47,760	19,54,907
Water-rate Fund—			
Water-rate	4,09,732	4,15,440
Sale of water	99,283	95,755
Water-supply, miscellaneous receipts	3,548	2,432
Total	5,12,563	5,13,627
Lighting-rate Fund			
	...	2,50,319	2,55,438

In the General Fund the receipts exceeded those of the previous year by Rs. 7,147. In the Water-rate Fund the receipts exceeded those of the previous year by Rs. 1,064. The receipts of the Lighting-rate Fund exceeded those of the previous year by Rs. 5,120.

7. The following table shows the expenditure of the municipality from the three ordinary revenue funds during the period under review, as compared with the actuals of the previous year:—

<i>General Fund—</i>	1883-84.	1884-85.
	Rs.	Rs.
Interest on loans	5,51,701	5,60,122
Contribution to Sinking Fund and repayment of loans	1,74,853	2,39,380
Establishment	2,05,290	2,07,225
Cost of collection	32,589	31,370
General expenditure	65,267	60,430
Road Department expenditure	2,45,515	2,66,995
Street-watering	53,120	52,725
Gowkhanah charges	95,780	1,14,783
Conservancy charges of the town	96,798	90,868
Municipal railway	67,042	49,195
Drainage pumping-station	33,991	29,560
House-drainage	5,577	7,236
Salt-Water Lakes	18,919	22,764
Burning Ghât charges	526	1,837
Night-soil Department	1,88,727	1,53,209
Slaughter-house	16,931	10,334
Municipal Market	25,248	24,849
Hospital and vaccination	35,098	35,417
Town Hall	3,743	21,280
Miscellaneous	98,548	2,03,444
Total	19,65,265	21,93,023
<i>Water-rate Fund—</i>		
Interest on loans	1,98,583	2,06,319
Contribution to Sinking Fund and repayment of loans	95,248	1,04,995
Establishment	83,723	86,413
Cost of collection	6,443	6,414
General expenditure	7,493	12,516
Working expenses	91,737	96,923
Charges for supply of water to shipping, &c.	16,203	16,123
Total	4,99,430	5,29,703
<i>Lighting-rate Fund—</i>		
Lighting lamps	2,34,689	2,58,237
Supervision and contingencies	4,907	5,198
Cost of collection	3,562	3,626
Cost of new lamps	820	7,334
Total	2,43,978	2,74,395
GRAND TOTAL	27,08,673	29,97,121

The expenditure from the General Fund exceeded the receipts by Rs. 2,38,118. This included Rs. 32,498, being an instalment credited to the Reserve Fund on account of 1883-84, which was not paid within that year. The expenditure from the Water-rate Fund exceeded the receipts by Rs. 16,076, and the Lighting-rate Fund also is shown to have had a deficit of Rs. 18,957.

8. There are certain funds not included in the above statements which are maintained for special purposes. The receipts of the *Police-rate Fund* during the year amounted to Rs. 2,85,418, and the disbursements made to the

in hand at the close of the year. The receipts of the *Jute Warehouse Fund* amounted to Rs. 23,381, 80 per cent. of which, Rs. 18,625, was due to the Commissioner of Police for maintenance of the fire-brigade. After meeting collection and inspection charges, there was a surplus of Rs. 1,031, which was credited to the General Fund. The receipts of the *Hackney Carriage Registration Fund* amounted to Rs. 15,384, out of which Rs. 5,767 were expended on account of establishment and other charges, leaving a surplus of Rs. 12,618. The receipts of the *Cart Registration Fund* amounted to Rs. 72,193, and the charges to Rs. 5,503, leaving a surplus of Rs. 66,690. The *Marcus Legacy Fund* had 4 per cent. Government securities to the value of Rs. 70,000 and a cash balance of Rs. 4,275. The *Chitpore Road Improvement Fund* had a balance of Rs. 11,969 at the commencement of the year. The expenditure for the acquisition of land amounted to Rs. 24,521, thus exceeding the amount at credit by Rs. 11,052, which will probably be made good from the General Fund.

9. The gross demand made by the Bill Department amounted to Rs. 22,59,063, against Rs. 21,93,045 in 1883-84. The outstanding balance on 31st March 1885 was Rs. 63,545, as compared with Rs. 67,240 in the previous year. It is stated that this outstanding balance would have been reduced to Rs. 31,968, had not bills to the amount of Rs. 31,577 been returned by the Collector and Warrant Officer a few days before the end of the last quarter of the year. Of the total demand of the year, the Collector realized 91·03 per cent., against 92·24 per cent. in the previous year. In the Warrant Department the outstandings amounted to Rs. 46,105, against Rs. 44,849 at the end of 1883-84.

10. The receipts under the head of license fees aggregated Rs. 4,85,104, as compared with Rs. 4,94,735 in the previous year, and the decrease is attributed to slackness of trade. Trade and profession licenses are shown to have yielded Rs. 2,64,183; carriage and horse licenses Rs. 99,744; trade refuse fees Rs. 86,944; hackney carriage registration fees Rs. 14,953; and cart registration fees Rs. 72,203.

11. The Corporation were engaged as plaintiffs in seven civil suits, of which two had been pending from the previous year. Three suits were decreed in favour of the Corporation, two suits were referred to arbitration, and two suits were pending when the year closed. It was stated in the report for 1883-84 that Baboo Nundo Lal Bose, owner of No 65 Bagbazar Street, applied to the High Court, praying for the issue of a writ of *certiorari* against the Commissioners in the matter of the assessment of his house. But Mr. Justice Pigot held that the High Court had no power to issue such a writ against the Commissioners. Baboo Nundo Lal Bose preferred an appeal from that order, and the Appellate Bench held that the Commissioners had not been guided by the principle laid down in section 104 of the Calcutta Municipal Act. The order of the lower court was reversed, and the *rule nisi* for the *certiorari* against the Commissioners was made absolute. In one case the Commissioners had to defend in the Police Court a charge brought against them for causing a nuisance by filling up a tank with street refuse. The Magistrate, after making a personal inspection of the locality, dismissed the charge on the ground that the Corporation had taken the best means in their power to abate the serious danger to public health caused by the filthy tank. In the criminal courts, 16,590 persons were prosecuted for various offences, against 12,387 in 1883-84. In the License Department the fines imposed amounted to Rs. 5,183, in the Conservancy Department to Rs. 4,780, and in the Health Officer's Department to Rs. 2,321. Prosecutions under the Vaccination Act were for the first time instituted in the Police Court: the number of summons issued was 353, and the amount of fines imposed was Rs. 32 only.

12. The year 1884 was characterized by drought and abnormally high temperature in the early months; a temperature of 103·7°F was registered about the middle of April. The rainfall was below the average, viz. 62·61 inches against 66·38, the average of the preceding 48 years. During the first four months hardly any rain fell. There was a rise in prices of food, but there was no distress in the town.

by the Army Sanitary Commission, so that the health statistics of Calcutta may easily be comparable with the sanitary records of other towns and countries of the civilized world. The number of births registered was 8,290 as compared with 7,484 in 1883, and 6,985 the mean of the preceding decade. The ratio of registered births per 1,000 of population was 19·1 as compared with 17·1 in 1883. The average birth-rate in England is 34·4 per mille. The Health Officer is of opinion that the registration of births was comparatively satisfactory, and shows results better than those of any year of which there is record, though it is apprehended that birth registration in Calcutta is still imperfect. Among the various races, the recorded birth-rates per mille were—

				1884.	1883.
Non-Asiatics	13·2	13·1
Mixed races	49·6	48·5
Hindoos	20·2	18·9
Mahomedans	15·9	13·6
Other classes	4·2	6·6

14. The number of deaths recorded during 1884 was 13,256 as compared with 12,325 in 1883, giving a death-rate of 30·5 per mille against 28·4. The year 1884 was exceptionally unhealthy in two respects: there was a severe outbreak of cholera in the months of March, April, and May, causing 1,616 deaths against a mean figure for the same months for the previous 14 years of 605. Small-pox also prevailed to an unusual extent, causing 478 deaths against 73 in 1883 and 17 in 1882.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE CUSTOMS DEPARTMENT FOR THE YEAR 1884-85.

FINANCIAL DEPARTMENT—CUSTOMS.

Calcutta, the 12th December 1885.

RESOLUTION.

READ—

Report on the Administration of the Customs Department for the year 1884-85.

The following statement shows the gross and net Customs revenue collected in Bengal during the past five years :—

BENGAL.

	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.
	Rs.	Rs.	Rs.	Rs.	Rs.
Import duty (excluding duty on salt)	72,72,428	61,72,091	14,87,018	15,13,590	13,25,339
Ditto on salt	2,37,44,398	2,37,15,929	1,74,72,613	1,73,13,587	1,91,86,114
Export duty	17,99,354	20,46,899	21,28,492	19,92,100	16,24,288
Total gross duty ...	3,18,16,170	3,19,35,818	3,10,88,123	3,08,19,277	3,21,35,741
Refunds and drawbacks—					
Imports	3,37,096	3,04,426	3,20,036	2,10,001	2,43,338
Exports	71,979	1,05,549	1,16,840	1,20,921	84,539
Total ...	4,09,075	4,09,975	4,37,476	3,31,912	3,27,877
Total net duty ...	3,14,07,095	3,15,25,843	2,06,50,647	2,04,87,365	2,18,07,864

The marked improvement in the net duty of Rs. 13,20,499, or 6·4 per cent., is due entirely to the larger importations and clearances of salt. As there was a reduction in the quantity in hand at the close of the year, it appears that the anticipated increase in the consumption of salt, owing to the reduction of duty on the article, has been realized. Import duty, exclusive of salt, shows a falling off of Rs. 1,88,251, or 12·4 per cent., due chiefly to the smaller collections made during the year on imported ale, beer and porter, spirits and wines. The decline in the export duty of Rs. 3,67,812, or 18·4 per cent., is attributable to the depression in the rice trade on account of scarcity in some parts of Bengal. From the returns for the several ports an improvement is noticeable in the net revenue of all except Balasore and Naraingunge. The increase amounted to Rs. 13,41,246, or 6·6 per cent., to which Calcutta contributed Rs. 12,14,719, or 6·4 per cent.

2. The total value of the imports into Bengal, exclusive of Government transactions, shows an advance of over 22 lakhs, but the improvement is confined to the coasting trade. Imports of foreign merchandise fell in value by 97 lakhs, and it was only a large increase in importations of silver that reduced the percentage of decrease in foreign imports to so low a figure as 1·2. In the coasting trade there was an improvement of nearly 52 lakhs, shared both by merchandise and treasure.

3. The value of the export trade of the year was Rs. 39,92,99,926 against Rs. 43,56,07,096 in 1883-84. In the foreign trade the exports declined in value by more than three crores, representing a decrease in value of merchandise of Rs. 3,27,00,831, and an increase in treasure amounting to Rs. 18,99,969. The falling off in the value of merchandise was due to the reduced exports of Indian produce. The total coasting trade exports show a decline from Rs. 7,34,73,565 to Rs. 6,79,67,260 owing to the smaller shipments of Indian produce from the Presidency and to the reduced quantity of silver taken by the Burmah ports.

4. *Calcutta, Foreign Trade.*—Government transactions consisted of Rs. 1,10,82,856 of imports and of Rs. 63,692 exports. There were decreases under both the heads. The fall in imports was chiefly in materials for the construction of railways, woollen piece-goods, and printing paper. Exclusive of these transactions, the imports of the foreign trade declined from Rs. 24,40,48,995 to Rs. 24,07,73,371, and the exports from Rs. 35,07,12,762 to Rs. 32,15,49,602. The principal falling off in the imports

was under the heads of white and coloured cotton piece-goods, railway plant and rolling-stock, machinery, and wrought copper and iron; while the decrease in exports occurred in wheat, raw cotton, opium, indigo, raw silk and sugar. On the other hand, an improvement is observed in the imports of grey cotton piece-goods, kerosine-oil, parts of ships, spices, refined sugar, and umbrellas, and in the exports of oil-seeds, hides, raw jute and gunny-bags and gunny cloths.

5. The proportions which various nations contribute to the foreign trade of Calcutta were not disturbed by any remarkable change. The share taken by the United Kingdom, which was as usual more than three-fifths of the entire trade of the port, fell off by nearly 3 crores, or 1.39 per cent. In the total trade with China there has been a decline of about 97 lakhs, due to the Franco-Chinese war. The trade with France has fallen off from 3.02 per cent. to 2.49 per cent., and that with Italy from 1.89 per cent. to 1.70 per cent.; but, on the other hand, there were larger transactions with the United States, Ceylon, Straits Settlements and Austria. In the case of the United States, there was an advance of nearly 51 lakhs in imports, consisting almost entirely of kerosine-oil, and of 24 lakhs in exports, comprising raw jute, gunnies and gunny cloths, indigo, linseed and saltpetre. Ceylon has taken more rice and treasure from Calcutta, and has exported less khopra or cocoanut kernel. The trade with Straits Settlements has materially recovered during the year under review. There has been an increase of over 47½ lakhs in exports against a decrease of nearly 2½ lakhs in imports. The increase under the former head is due to heavy shipments of opium and gunny-bags to Singapore and Penang. The decline of imports is entirely under the head of treasure; imports of merchandise showing a slight improvement. An advance of over 4½ lakhs is observed in the trade with Austria, due almost entirely to larger importations of cotton-goods and aniline dyes from that country. The proportion of the foreign trade of Calcutta using the Suez Canal amounted last year to 63.3 per cent. against 63.6 per cent. in 1883-84 and 58.6 per cent. in 1882-83.

6. *Imports.*—Imports of cotton twist and yarn increased in quantity by 44,211 lb, but the value fell off by Rs. 3,90,146 in consequence of accumulation of stocks. Piece-goods of all kinds taken together did not fare better, suffering a decline in value of Rs. 30,62,036, or 2.6 per cent. There was a heavy increase in the quantity of grey shirtings imported, the number of yards rising from 666 millions to 702 millions; but this increased importation was owing rather to excessive production in England than to any legitimate expansion of demand in Bengal, and the year closed with a large accumulation of stocks. Not only had the short crop in 1884 considerably affected the purchasing power of the agricultural population; but the complications with Russia on the Afghan frontier made dealers cautious and restricted their transactions. In British white piece-goods the decline was very large, and there was a decrease also in the small trade with France. American imports increased, but the trade in piece-goods with the United States is still very insignificant. The demand for woollen piece-goods was higher, and the price was favourable to importers. The trade in shawls was less active owing to unduly large importations in 1883-84. Umbrellas were imported in larger numbers than in any previous year, and the demand is said to be at present unequal to the supply.

7. The total results of the trade in metals show a decline in value of Rs. 34,63,931, the decrease being most marked in iron, copper, quicksilver and zinc. The imports of unwrought iron have fallen off by 59 per cent., and of wrought iron by 8 per cent.; this is due to the overstocking of the market in 1883-84. The quantity of lead imported last year was about the average. Machinery and mill-work have declined from Rs. 82,79,734 to Rs. 66,77,062, owing to the larger importations made in 1883-84 and to the depression in jute trade. The value of the imports of railway plant and rolling-stock has fallen off from Rs. 80,58,949 to Rs. 48,36,232, or about 40 per cent., in consequence of the railways that were under construction either having been completed or being in an advanced state.

8. The trade in mineral oil was very brisk in the year under review. 17,282,047 gallons were imported against 7,566,526 gallons in 1883-84. The increase was chiefly made up of the oil from America, which rose from 6,811,883 gallons to so many as 16,120,532 gallons. The Collector of Customs

attributes this large increase to an attempt made last year to break the combination by which the trade in this oil was monopolised by two large dealers in Calcutta. The competition thus excited caused importations in excess of the present demand, and large stocks have accumulated. Prices have, therefore, been kept very low, and the result will probably be a great expansion of the demand. Kerosine-oil is now coming into free use in all places to which there are easy means of transport, and it would be difficult to assign a limit to the possible development of the trade. An advance is also observed in the imports of a superior quality of oil from the United Kingdom and British Burmah. The increase shown under other countries does not, it is said, indicate the opening out of any fresh sources of supply, but is mainly accounted for by two large consignments of American oil brought on here from Victoria, probably in anticipation of obtaining a better market.

9. The imports of malt liquors have fallen off in quantity from 601,477 gallons to 436,303 gallons, and in value from Rs. 14,58,090 to Rs. 10,87,848. The decline is principally observable in Bass' beer, from 200,800 gallons to 130,611 gallons. Pilsener has slightly declined, but it has now displaced Bass from the head of the list, and become the most largely imported beer. The imports of spirits have declined, both in quantity and value, owing to the stock remaining in hand from the shipments of previous years passing into consumption during the year under review. The demand for brandy has fallen exceptionally low, and the imports of this spirit were, for the first time, less, both in quantity and value, than those of whisky. There was a general decline in every description of wine and liqueur, which is partly attributed by the Collector of Customs to an increase of non-alcoholic habits, and to some extent to a growing preference for whisky, due to its comparative cheapness. The importation of Australian wines has not advanced.

10. The imports of corals have fallen off from 154,716lb to 151,892lb in weight, and from Rs. 20,39,316 to Rs. 16,17,434 in value. The depression in this industry is due to the overstocking of the market in previous years. As compared with 1883-84, there was an increase under the head of agricultural implements of more than a lakh, but they have not yet reached the average of previous years.

11. The trade in tea with China, Straits Settlements, and other countries has fallen off by $67\frac{1}{2}$ per cent. This is attributed by the Collector of Customs to the very low prices of the common kinds of Indian teas during the last year having enabled the buyers of cheap tea to supply their wants from the local market at favourable rates. The chief recommendation of China tea is its cheapness, so that if the Indian gardens can continue to supply tea such as natives drink at low prices, importations from China will shortly cease altogether.

12. The progressive increase in the importation of cigars, noticed in last year's Resolution, has been checked, Manilla cigars being displaced by cigars made in India and Burmah. The imports of manufactured tobacco have, on the other hand, advanced, owing to the high prices ruling in the Calcutta market.

13. *Exports.*—To the total value of goods of Indian manufacture exported from Calcutta, opium contributes $19\frac{1}{2}$ per cent., jute $17\frac{1}{2}$ per cent., tea $12\frac{1}{2}$ per cent., oil-seeds $11\frac{1}{2}$ per cent., grain and pulse $9\frac{1}{2}$ per cent., indigo $9\frac{1}{2}$ per cent., hides and skins 8 per cent. Other exports, of which silk, raw cotton, lac, saltpetre, castor-oil and sugar are the most important, make up the balance. The jute crop being abundant last year, the exports of the raw fibre rose by 1,352,244 cwt. in quantity and Rs. 21,68,906 in value. Except Australia, all the jute-consuming countries contributed to this increase. The exports of gunny-bags show an increase in quantity from 62,420,662 to 81,626,604, and in value from Rs. 1,22,88,708 to Rs. 1,38,94,455. The apparent improvement in this trade, however, is no cause for satisfaction. The Collector of Customs has offered the following remarks:—

“Under ordinary circumstances such a large development of any trade should indicate that the trade is in a prosperous condition; but it is very far from being the case in this instance. The increase in exports shown unfortunately represents over-production: the output had somehow to be disposed of; but it could not be disposed of profitably. The prosperous condition of the jute manufacturing industry in 1884-85 brought about more mills and large increases in the producing capacity of those in existence, and the extra quantity of the

manufactured article to be disposed of has accentuated the depression that began in 1883-84. The crop of jute last year, though large, did not reduce the cost of production sufficiently to ensure profits, for prices of bags also fell, with the result that nearly all the mills during the past year have been working at a loss, and in one case the company has gone into liquidation.

"Efforts have been made to arrange to work the mills short time, but for want of unanimity this arrangement, I understand, could not be carried out. A smaller production would probably result in larger prices, and might lower the price of raw jute, and both these things would of course be of advantage to the mills; but, it should not be forgotten that the cost of the manufactured article would thereby be raised, the tendency of which would be to check consumption and place Calcutta at a disadvantage in competing with Dundee. The alternative course, to which the force of circumstances has led, appears to be to go on producing up to the capacity of the mills, and so spread the fixed expenses which might be met over the largest production possible; but this leads to heavy losses, and it so becomes a question of a mill being strong enough to hold out until the depression of trade, which is general all over the world, has passed away, when jute manufactures will no doubt again rise in value."

14. The exports of tea have increased from 59,190,914lb to 63,830,228lb: with a decline in value from Rs. 4,02,34,619 to Rs. 3,98,18,726. There appears to be some reason to believe that the markets cannot be extended with sufficient rapidity to keep pace with the increased production of tea; and if this is the case there can be no hope of any material rise in prices. The exports to Australia have advanced, but those of deliveries of China tea to America have fallen off. The proportion of deliveries of Indian tea in London in the year under review is 41.3 per cent., while it was 34.6 per cent. in 1883-84. India, however, has a formidable rival in Ceylon. The exports of Ceylon tea to London have risen to 2,392,973lb from 1,665,768lb in 1883 and 697,268 in 1882, and, as the following remarks of the Collector of Customs show, the trade is capable of great expansion:—

"The amount even now is insignificant compared with the exports of Indian tea, but it will increase year by year, and the extension in cultivation already is said to have been from between 200 and 300 acres in 1873 to 48,000 acres in 1884. This is an enormous advance and the production, when the large available acreage, said to be from 150,000 to 160,000 acres, has been opened out and comes into full bearing, will have a very sensible effect on the tea market. It has been estimated that about 70,000,000lb yearly may eventually be the outturn of Ceylon Tea there has several advantages. First and foremost is the excellent quality of the tea produced, for it is said to be equal to the very best of the Indian teas, and it obtains quite as high prices. In London, during the past year, there was an active enquiry for Ceylon teas, buyers finding them to be most useful for mixing purposes. Then an acre in Ceylon will produce half as much tea again as it will in India. The climate, too is more to be depended on for tea-growing, there is a good supply of labour, and the tea can be more cheaply shipped. Lastly, Ceylon is growing tea on our experience, and will presumably avoid our past mistakes. With all these advantages, it is clear that the prospects of Ceylon tea are in the ascendant, and that the expansion of tea-growing there will continue rapid."

15. The exports of rice fell from 6,082,023 cwt. to 4,953,065 cwt., with a rise in price from Rs. 1,98,95,582 to Rs. 1,99,16,842. The decline in quantity is attributable to the large demand for local consumption arising out of scarcity in some parts of Bengal. Of the exports of oil-seeds, linseed, the most important, has declined by 12.4 per cent., while poppy, rape and tilseed have improved.

16. The following table shows the exports of wheat from Calcutta for the last five years:—

1880-81.		1881-82.		1882-83.		1883-84.		1884-85.	
Cwt.	Rs.	Cwt.	Rs.	Cwt.	Rs.	Cwt.	Rs.	Cwt.	Rs.
2,442,297	1,32,36,366	4,664,366	2,32,08,326	4,498,506	1,79,32,350	7,611,416	2,04,57,546	2,392,977	99,91,807

The figures of 1884-85 are the lowest for some years. The falling off amounted to 66 per cent.: and more than 60 per cent. of this occurred in the shipments to the United Kingdom. The cause of this heavy decline is said to be due to the extraordinarily low prices of wheat ruling in the United Kingdom owing to an extraordinary wheat crop, and the enormous supplies available there and

the article, and the decline in the trade was due to higher prices and shortness and bad quality of the crop. The exports of raw silk decreased by 3·2 per cent. in quantity and 26 per cent. in value. This heavy decline in price is the result of the market in London for raw silk having been fairly supplied from China and of the accumulation of large stocks. There was, on the other hand, an improvement of nearly 28 per cent. in exports of silk piece-goods. The trade in lac revived, the total quantity and value having increased by 30,275 cwt. and Rs. 4,41,449 respectively. The trade in refined sugar collapsed, exports dwindling from Rs. 17,60,378 to Rs. 1,37,221; and Bengal last year imported more of this article than was exported. The sudden depression is said to be due to the very low price of sugar resulting from the enormous production of beet-sugar on the continent. The exportation of unmanufactured tobacco has decreased by 40 per cent. The figures are, however, higher than those of 1882-83 and of all previous years.

18. The net imports of gold fell off by more than 13 lakhs, owing, it is said, to the unfavourable state of trade. Both the imports and exports of silver have increased by 80½ lakhs and 19 lakhs respectively. The increase under exports is said to be due to larger shipments made to Ceylon. The principal cause of the rise in imports was the smaller drawings of the Secretary of State, which necessitated the sending of silver by remitters from London.

19. *Coasting trade.*—The total imports of the coasting trade of Calcutta rose from Rs. 3,33,17,031 to Rs. 3,47,94,792, while the total exports fell from Rs. 4,7,83,813 to Rs. 4,56,12,750. The importations of cotton twist and yarn show a further advance of 603,858 lb., and the figures are the highest yet reached. The total value has, however, declined by Rs. 1,51,080 owing to the low selling price of the articles. The receipts from Bombay have exceeded those from the United Kingdom by 503,284 lb. The increase in quantity has been attributed by the Collector of Customs to the unsatisfactory state of the market in Bombay for country-made twist and yarn, leading the spinners there to seek outlets for their productions in other quarters. The imports of castor seed, turmeric, gram, manufactures of coir, and ground nuts and refined sugar from Madras, and those of paddy from Bengal outports, have increased. The imports from British Burmah have declined with the decline in the importation of teak timber. The decline in exports occurred in shipments of rice and refined sugar to Bombay, and of cotton twist and tobacco leaf to British Burmah.

20. *Minor Ports.—Chittagong.*—The total value of the foreign trade of Chittagong has fallen off from Rs. 1,00,61,967 to Rs. 83,10,652, representing an increase in the imports of Rs. 2,88,650 and a decrease in exports of Rs. 20,39,965. The increase under the head of imports was chiefly due to the direct importation of salt from England and of kerosine-oil worth over two lakhs from America. The trade in the latter article with America is likely to develop still further. The export trade shows a decline, both in quantity and value, in all articles of Indian produce, except tea. The decreases were the heaviest in jute and rice. In the coasting trade there was a total decrease of Rs. 14,58,015, the details of which are of no special interest.

21. *Orissa Ports.*—The value of the total trade of the Orissa ports rose during the past year by Rs. 42,33,859, or 29 per cent. In the foreign trade of Balasore there was a falling-off, but the coasting trade of the port was exceptionally brisk. An advance of about 5 lakhs or 45·1 per cent. is observed in the foreign trade of Cuttack, the increase being chiefly in exports of rice to Galle, Colombo and the Maldives, but the coasting trade shows a considerable decline, and much of it is being diverted to the port of Chandbally in Balasore. The value of the Pooree rice trade increased over ¼ lakh, or 18·8 per cent., but the total trade of the port shows a slight falling off.

22. *Port of Naraingunge.*—An increase of Rs. 24,255, or 3 per cent., is observed in the value of the total trade of the port. The exports of jute, to which Naraingunge principally owes its importance, rose from 1,630,637 cwt. to 1,200,903 cwt. in quantity and from Rs. 79,23,759 to Rs. 71,25,060 in value.

23. The Lieutenant-Governor thanks the Board for their efficient supervision of the work of the department during the year. His acknowledgments are also due to Mr. Armstrong for his interesting report. The names of the officers favourably noticed by the Board will be communicated to the Appoint-

RESOLUTION ON THE ADMINISTRATION REPORT OF THE PORT OF CHITTAGONG FOR 1884-85.

MUNICIPAL DEPARTMENT—MARINE.

Calcutta, the 12th December 1885.

RESOLUTION.

READ—

The Report on the Administration of the Port of Chittagong for the year 1884-85.

Read also—

The Report for the year 1883-84, and the Resolution recorded upon it.

The trade of Chittagong shared the general depression in all branches of commerce during the year 1884-85, but on the whole the statistics recorded during the year are satisfactory, and there is every hope of a general revival in trade being accompanied by a rapid development of the business of this port.

2. The following table shows the number and tonnage of vessels which visited the port during the year, and the corresponding figures for the previous year:—

PARTICULARS.	1883-84.		1884-85.		Increase.		Decrease.

3. The increase in the number and tonnage of European vessels engaged in the foreign trade was due to a larger exportation of rice to the West Indies than in the previous year. The large increase in the tonnage employed in the Naraingunge inland trade is attributed to the fact that "nearly all the jute was carried last year by Chittagong vessels, which are larger than the foreign-owned vessels largely employed in the previous year. For this reason the increase of 10,449 tons was combined with an increase of only three vessels."

4. The following is an abstract of the quantity and value of the principal articles imported and exported during the past two years:—

		1883-84.		1884-85.	
		Quantity.	Value.	Quantity.	Value.
EXPORTS.		Tons.	Rs.	Tons.	Rs.
Jute	53,228	76,69,330	53,164	61,88,602
Rice and paddy ...	{ Foreign ports	33,849	20,52,185	20,372	15,08,891
	{ Home ports	31,743	13,78,575	17,490	8,32,845
Total	...	65,592	34,30,760	37,852	23,41,536
IMPORTS.					
Salt	16,893 Gallons.	2,74,828	22,527 Gallons.	3,62,362
Mineral oils	294,444	1,46,267	903,358	4,01,312

The large falling off in the quantity of rice exported is attributed to two causes; owing to high prices trade in this article was dull at the beginning of the season; and later on, when it might have revived, the north-west winds had set in, and the ballam boats in which the rice is brought from Noakhally to Chittagong could not venture out to sea. The Lieutenant-Governor has no doubt that it would be a very great advantage if, at any reasonable cost, the Moheshkhali canal could be permanently opened out so as to afford a safe passage for these boats at all times of the year, and the proposal to retransfer the canal to the port with this object will be dealt with as soon as the question of the formation of a Port Trust at Chittagong has been finally decided. Certain details connected with this important question are still under the consideration of the local authorities. There was a large increase in the importation of salt and mineral oils, and the kerosine oil trade appears to be now firmly established.

5. The total receipts of the Port Fund during the year 1884-85 amounted to Rs. 74,116 against Rs. 81,340 in the previous year, showing a decrease of Rs. 9,596, which was chiefly due to the falling off in pilotage collections. The whole question of pilotage at Chittagong is now under special consideration.

6. The expenditure of the port during the year under review was less than that of the previous year by Rs. 36,312, the total being Rs. 46,554 against Rs. 82,866. The decrease was chiefly under Dockyard charges "partly due to the whole of the charges not having been debited during the year, and partly due to decreased purchases of materials."

7. Six new vessels were built at the port during the year with a gross tonnage of 1,022, against twelve with a tonnage of 1,829 in the previous year. Apparently, therefore, as observed by the Commissioner, the tendency is to build a larger class of ship.

8. The jetty is reported to be in good order, but no use was made of it during the year. At low water there is only 14 feet of water at its head, and ships of greater draught cannot therefore approach it. On the establishment of a Port Trust at Chittagong, it will be for consideration whether the jetty should not be extended further into the river, and improvements made at its head to admit of two hatchways of a salt ship being worked at the same time. The moorings of the port were fully utilized, and during the height of the season were found to be insufficient for the accommodation of all the vessels in port. Additional moorings are required for the port. The buoyage arrangements continued satisfactory. All the leading marks indicating the channel of the river were kept in good order, and no alteration was found necessary. The whistling buoy on the South Patch shoal is reported to have broken away, and endeavours are being made to recover it. The tide-gauges were kept in good order; but they are said to be of little use, as they only record the height of the tide. Arrangements have been made for the transfer next year of a self-registering tide-gauge from Moulmein to Chittagong.

9. The lights at Kootubdea and Norman's Point were kept in order, but they are very defective, and are not at all suited to modern requirements. The question of placing a more powerful light at Kootubdea is under separate consideration. The improvement of the Norman's Point light must be deferred till the Port Fund is in a position to bear the necessary expenditure.

10. Eight accidents to vessels took place in the river during the year under report, against six in the previous year. None, however, were of a serious nature. In five cases the vessels were in charge of port pilots, but the pilot is reported to have been in fault in only one instance. The number of wrecks which occurred outside the port was nine; of these six took place during the gale of 1st November last, when several lives were lost. One of these vessels was afterwards floated and brought into port.

11. A permanent dock has been constructed near the office of the Port Officer in the Monoharkhali large enough to admit of the docking of the pilot-cutters, steam-launch and heave up boat, and during the year all these boats were docked and thoroughly overhauled.

and one of the pilot cutters will be utilized for the purpose until arrangements of a more permanent nature can be made. The Commissioner has summarised the wants of the port in paragraphs 53 to 60 of his report; they are, briefly, better towage; better lighting; more moorings; a telegraph to the mouth of the river; a sailors' hospital; the excavation of the Moheshkhali; and a road to the lower moorings. Some of these wants are being supplied, but the greater number must be deferred until the Port Trust is constituted. It is impossible for Government to undertake the cost of works which are more appropriately chargeable to the Port revenues; and it would therefore be premature to discuss these questions until this larger question has been decided.

13. The Lieutenant-Governor is glad to notice that the Port Officer, Mr. Good, continues to receive and deserve the commendation of his superior officer for the manner in which he performs his duties.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 12th December 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, Dec. 12 '85	Nil	Weather—seasonable. <i>Rubbee</i> crops promise well. Public health good. Price of rice 13 to 20 seers per rupee.
	2 Bankura, „ 12 „	Nil	Weather—bright; latterly cloudy and cool. Rice harvest still continues actively, yielding a full crop. Prospects of <i>rubbee</i> crops good. Prices falling. Health satisfactory.
	3 Beerbhoom, „ 12 „	Nil	Weather—nights of latter half of the week cloudy, otherwise fine. Harvesting of <i>amun</i> paddy going on. Sowing of <i>rubbee</i> crops nearly finished. Prices falling. Public health satisfactory.
	4 Midnapore, „ 12 „	Nil	Weather—seasonable. <i>Amun</i> harvest yielding very well where the floods did not extend. <i>Rubbee</i> crops and <i>boro</i> rice promising. Public health normal.
	5 Hooghly, „ 12 „	Nil	Weather—normal. Prospects of crops good. Harvesting of <i>amun</i> going on. Rain would benefit <i>rubbee</i> . Fever in some parts of the district.
	Howrah, „ 14 „	Nil	Weather—rather warm and cloudy. <i>Amun</i> crop being reaped. A very good crop in thana Shampore, elsewhere bad crops where there are any, and in many places a total failure. Sugarcane not prospering. Vegetables and winter crops good. Health good.
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Pargha, Dec. 14 '85	Nil	Weather—seasonable, but cloudy towards the close of the week. Prospects of <i>amun</i> , except in low and inundated tracts, and of winter crops, are good. Public health generally good, though cholera has broken out to a very small extent in Diamond Harbour and Baraset.
	7 Nuddea, „ 12 „	Nil	Weather—seasonable. Prospects of winter crops excellent. <i>Amun</i> rice is being harvested with a very good outturn in tracts unaffected by the floods of September. Cholera still reported from Kooشته.
	8 Khoolna, „ 12 „	Nil	Weather—clear and rather warm. Late rice harvest commenced; prospects favourable. Winter crops doing well. Cholera has appeared in several places.
	9 Jessore, „ 12 „	Nil	Weather—seasonable. Harvesting of <i>amun</i> continues; prospects good. Price of rice falling. <i>Rubbee</i> crops doing well. Fever has abated. Cases of cholera here and there.
	10 Moorshedabad, „ 12 „	Nil	Weather—seasonable. <i>Amun</i> rice still being harvested. <i>Kalai</i> almost ready to be harvested. Prospects of all other crops good. Public health good. Common rice selling at 19 seers per rupee in Kandi and Jungipore sub-divisions.
RAJSHAHY DIV.	11 Dinagore, Dec. 11 '85	Nil	Weather—fine and seasonable. <i>Amun</i> harvest progressing. <i>Rubbee</i> doing well. Rice sells at 20 seers per rupee on the average.
	12 Rajshahye, „ 12 „	Nil	Weather—seasonable. Harvesting of <i>amun</i> paddy continues. Prospects of winter crops generally good. Public health somewhat improving.
	13 Rungpore, „ 12 „	Nil	Weather—seasonable. <i>Amun</i> being harvested. Land being ploughed in some places for sowing of early paddy. Winter crops thriving. Wheat is being sown. Cholera reported from some places in the interior.
	14 Bogra, „ 12 „	Nil	Weather—cold; night dews heavy. Fogs setting in. State and prospects of crops continue to be very good. Public health fair, but cholera has been reported in certain villages.
	15 Pabna, „ 12 „	Nil	Weather—seasonable. <i>Amun</i> being harvested with favourable outturn. Winter crops doing well. Fever not nearly so prevalent as last year.
	16 Darjeeling, „ 12 „	Nil	Weather—cold and thick. Crops all good.
	17 Julpigoree, „ 12 „	Nil	Weather—cold with cloudy sky and occasional wind. Harvesting of <i>haimanti</i> paddy progressing with good outturn. Prospects of other crops good. Cattle-disease continues at Fallacotta. Fever reported from Alipore, otherwise public health good.
<i>Eastern Districts.</i>			
Dacca Division.	18 Dacca, Dec. 12 '85	Nil	Weather—cold. Harvesting of paddy going on. Pulses being sown. Prospects of crops good. Several cases of cholera reported from town and other parts of district.
	19 Furreedpore, „ 12 „	Nil	Weather—seasonable. Harvesting of <i>amun</i> crop continues. Prospects of winter crops good. Fever prevailing in parts of the district.
	20 Backergunge, „ 10 „	Nil	Weather—seasonable. Paddy ripening favourably. Fever rather bad.
	21 Mymensingh, „ 11 „	Nil	Weather—cold and seasonable. State and prospects of crops good. Cholera reported from several parts of the district.
CHITTAGONG DIV.	22 Chittagong, Dec. 15 '85	Nil	Weather—seasonable. Prospects of crops fair. Lands being prepared for cold-weather crops. Harvesting of <i>amun</i> continues. Prices steady. Public health good.
	23 Nonkhelly, „ 11 „	Nil	Weather—seasonable. Outturn of winter rice reported to be 12 annas. Cold-weather crops progressing favourably; some damaged in Betla, but resown. A few cases of cholera here and there.
	24 Tipperah, „ 10 „	Nil	Weather—cloudy and unseasonably warm. Paddy harvest proceeding. Ploughing for winter crops commenced. Prices falling. Cholera has broken out in Comulish and Brahmanbarah towns, and spreading in rural tracts.
	25 Chittagong Hill „ „	Nil	Weather—cloudy and unseasonably warm. Paddy harvest proceeding. Ploughing for winter crops commenced. Prices falling. Cholera has broken out in Comulish and Brahmanbarah towns, and spreading in rural tracts.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BEHAR.			
PATNA DIVN.	26 Patna, Dec. 12 '85	Nil	Weather—cold. <i>Jowar</i> and paddy being harvested. Poppy and <i>rubber</i> crops growing splendidly. <i>Rahar</i> and cotton look well. Public health good.
	27 Gaya, " 12 "	Nil	Weather—dry and cold. Prospects of <i>rubber</i> and poppy crops everywhere good. Rice harvest continues. Health good. Prices lower than last year.
	28 Shahabad, " 12 "	0.05	Weather—fair and seasonable throughout the week, but rainy to-day (12th). Harvesting of paddy nearly over. Prospects of <i>rubber</i> favourable, and will be further improved by the shower of to-day. Poppy sowings completed except in places; prospects excellent.
	29 Durbhanga, " 12 "	Nil	Weather—cool and cloudy. Harvesting of paddy progressing fast. <i>Rubber</i> continues promising, but rain is wanted. Tobacco and poppy look well. Prices falling. General health good.
	30 Mozufferpore, " 12 "	Nil	Weather—cold and cloudy. Harvesting of paddy going on. New rice selling in the market. <i>Rubber</i> crops very promising. Prospects of poppy continue favourable. Public health good.
	31 Sarun, " 12 "	Nil	Weather—fair and cool; cloudy with drizzling rain since last night (11th). Harvesting of paddy continues; outturn good. Prospects of <i>rubber</i> and poppy crops favourable, but rain much wanted. Public health good.
	32 Chumpanun, " 12 "	Nil	Weather—cloudy. Prospects of <i>aghani</i> crop continue good. Reaping has commenced in some places. Poppy prospects continue good; a very small percentage of the area now remains to be sown. Prices have fallen slightly. Public health fair.
BRAGULPUR DIVN.	33 Moughyr, Dec. 12 '85	Nil	Weather—cold and cloudy for the latter part of the week. Harvesting of <i>aghani</i> paddy continues. Winter crops promise well. Prices easy. Public health good.
	34 Bhagulpore, " 12 "	Nil	Weather—seasonable. Rice is being harvested. Prospects of <i>rubber</i> crops good, but rain wanted. Prices stationary. Public health good.
	35 Purneah, " 12 "	Nil	Weather—fine till 11th now cloudy. State and prospects of crops good. <i>Aghani</i> harvest commenced; yield good. Cholera abating.
	36 Maldah, " 12 "	Nil	Weather—fine and cool. Reaping of late rice going on, yielding a full crop. Prospects of <i>rubber</i> crops good. Common rice now selling at from 18 to 22 seers per rupee. Public health good.
	37 Sonthal Pergna, " 12 "	Nil	Weather—cold and cloudy. Harvesting of rice continues in all quarters. Prospects excellent. Prices of food-grains falling. Winter crops promise well. Health good.
ORISSA.			
ORISSA DIVN.	38 Cuttack, Dec. 11 '85	Nil	Weather—cold; cloudy at times. Reaping of early <i>sarad</i> going on briskly, late <i>sarad</i> ripening. <i>Rubber</i> flowering. Common rice selling at 13 seers per rupee in town, and 16 to 20 seers in interior. Sporadic cases of cholera reported from Jajpore and also from Kanika; otherwise public health good.
	39 Pooree, " 10 "	Nil	Weather—seasonable; coldness decreasing towards the end of the week. Late <i>sarad</i> ripening and in some places being reaped. <i>Laghu sarad</i> being harvested. <i>Rubber</i> crops progressing well. <i>Dalua</i> crop being sown. Relief works going on in the Chitka tracts which have suffered loss of crops from drought. Common rice selling at an average of 18 seers 15 chittacks per rupee in Sudder sub-division and 18 seers 3 chittacks in Khoorda sub-division. Cases of cholera reported from the gunnais Chabbiskud, Kotdes, and Oldhar in the Sudder sub-division, and from pergunnahs Kaspalla, Khoorda and Banpore in Khoorda sub-division. Fever in the town and in pergunnah Ramenwar.
	40 Balasore, " 11 "	Nil	Weather—seasonable. Harvesting of paddy continues. Prospects of winter crops good. General health fair; a few sporadic cases of cholera reported from Kamarda, Singha and Dhannagpur Chuklas.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41 Hazaribagh, Dec. 11 '85		Nil	Weather—seasonable; cloudy latterly. Harvesting of paddy continues with good outturn except in the west of the district where there has been partial failure. <i>Rubber</i> crops generally promise well. Poppy has germinated fairly and promises well. General health good.
42 Lohardugga, " 12 "		Nil	Weather—cold and cloudy. Harvesting of winter paddy still continues. Prospects of <i>rubber</i> fair, but some rain wanted. Prices steady. Fever reported here and there; health otherwise good.
43 Singhbhum, " 11 "		Nil	Weather—cloudy; threatening rain. Winter rice still being cut. All crops on the ground excellent. General health good.
44 Manbhum, " 12 "		Nil	Weather—seasonable. Greater portion of <i>owas</i> now reaped; the crop is a bumper one. Coarse rice selling at from 25 to 26 seers per rupee throughout the

12. If some of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

ALEXANDER PEDLER,

Offg. Meteorological Reporter to the Govt. of Bengl.

METEOROLOGICAL AND RAINFALL SUMMARY OF THE PROVINCE OF BENGAL FOR THE MONTH OF NOVEMBER 1885.

Normal meteorological features of the month.—The usual conditions of the meteorology in Bengal during November are simple; the north-east monsoon generally establishes itself in Bengal before the close of October, and thus November is characterized by rapidly falling temperature, especially at night, clear if not cloudless skies, and little or no rain. Wind directions too are usually northerly, with a more or less westerly element in them, and generally only light and gentle winds prevail. These northerly winds gradually drive back the south-west monsoon winds which had previously swept over the whole Bay, and cause them to curve inwards, and to reappear on the Madras coast as what is there called the north-east monsoon, which current gives heavy rain to the Madras Presidency. These conditions are, however, liable to be disturbed by two causes: the first of which is the formation in the Bay of Bengal of a cyclonic vortex, large or small as the case may be, generated by the condensation of large quantities of rain in the front of the gradually retreating south-west monsoon, which, although it has ceased to affect Bengal, continues to blow in the south of the Bay during a great part of November. The formation of such a vortex has always an influence on the weather in Bengal, and while, if it passes into Bengal, the whole weather conditions are completely changed, yet, even if it passes into Burma or into Southern India, the weather conditions are always more or less affected by it. It is, however, very rarely that a cyclone thus generated in the Bay passes into Bengal in November, and in those cases, where cyclones have thus passed into Bengal in this month, it is usually quite at its commencement, for during the latter part of this month cyclones are only formed in the south of the Bay, and usually pass towards the Madras coast, striking it about Madras or to the south of that station.

The second disturbing element in the weather of November is from an opposite cause, and is due to the occurrence of land storms generated, it is believed, usually in the Punjab, which storms drift eastwards and southwards through the North-West Provinces, and sometimes influence the weather in Behar and Bengal very considerably. It is, however, an extremely rare thing for such a storm to enter Bengal in November, though they sometimes do so in the later months of the north-east monsoon.

In the case of both disturbing causes, they produce clouded skies, increased humidity and temperature, and light to moderate rain, or if the locality is directly influenced by a cyclone, then of course heavy rain is received. Excepting, therefore, under these circumstances, weather during November is fine with passing clouds, and there is little, if any, rainfall. The average normal rainfall in the whole of the Province, excepting the Chittagong, Backergunge and Nonkhally districts of East Bengal, and the Cuttack and Pooree districts in Orissa, is not more than a few tenths of an inch, while in these exceptional districts the average rainfall varies only from one to three inches.

Meteorological summary for the month.—At the close of October the weather conditions in Bengal were those of the north-east monsoon, and, if anything, the north-east monsoon conditions were rather more strongly pronounced than is usual at the end of October. The skies over the whole of Bengal were practically cloudless, temperature had fallen rapidly and was decidedly below the average, humidity was low, and a steady northerly current was blowing over the greater part of the Province. The north-east monsoon conditions were at this period being intensified by the occurrence of the Madras rains, for heavy rain had fallen at all stations from Masulipatam down to Galle, and, as explained above, this action always increases the steadiness of the north-east current in Bengal. At the commencement of November, however, the heavy rainfall along the Madras coast suddenly ceased, though a steady northerly current continued to blow at the northern stations in the Bay, and very strong winds continued to blow at Galle. On the 2nd of November it became evident that a cyclonic storm had formed in the south of the Bay, and that it was approaching the west coast. Pressure fell rapidly with the advance of the storm towards the coast, and at Madras the fall from 10 A.M. of the 1st of November to 10 A.M. of the 2nd was about two-tenths of an inch. The cyclonic storm apparently crossed the coast about midway between Masulipatam and Madras during the evening of the 2nd of November, and from the reports received from Simla, it would appear that the storm travelled across the whole of the Peninsula without breaking up. The storm was a large though not an intense one, and it affected the whole of the stations on the west coast of the Bay, giving heavy rain to the central stations and lighter rain to the others. Rain was therefore received at almost all stations in Orissa on the 3rd and 4th of the month, and in some cases on the 5th; the southern stations receiving heavy and the northern stations light rain. With the advance of this large disturbance across the west coast, weather in Bengal also became unsettled, skies clouded over rapidly, and in the southern districts they became almost practically overcast for some days. Considerable amounts of moisture drifted over the Province, and humidity and temperature rapidly rose. The northerly winds rapidly fell off in force, and winds became light and variable. During the continuance of these disturbed conditions, a few light showers were reported from Chutia Nagpur and also at a few stations in South-West Bengal, and at the stations in the Darjeeling Hills, but the amounts were insignificant. From about the 5th or 7th of

On the 14th of the month, however, the weather conditions in the south of the Bay became disturbed. Winds commenced to strengthen at all the southern stations, while pressure fell rather rapidly off the Ceylon coast. These conditions continued on the 15th, and it was clear that stormy weather was commencing. On the 15th there were the first indications of the formation of a cyclonic storm in the extreme south of the Bay, and on this day Negapatam reported 8 inches of rain and Madras 4 inches. Weather continued very stormy along the coast on the following day, and at Negapatam, on the 17th, the excessive rainfall of 18.61 inches was reported, while on the same day Madras reported 5.78 inches; on these two days Negapatam reported no less than 21.62 inches of rain, and Madras 9.74 inches. The unsettled and stormy weather then commenced to move in a northerly direction, and on the 18th the storm was a little to the south-east of Madras, and probably not far from the coast. It then moved slowly in a north-easterly direction, and on the 20th it was nearly in the centre of the Bay, and in about the latitude of Masulipatam and Diamond Island. At this time the storm was giving strong winds in the south and west of the Bay, and very strong winds at Diamond Island. The storm continued its slow northward advance, and on the 21st, judging by the fall of the barometer at Diamond Island, it appeared to be moving towards that station; but on the morning of the 22nd it was some little distance to the south-west of Akyab, and was still moving slowly in a north-easterly direction, and finally, on the morning of the 23rd, it passed inland to the south of Chittagong.

The barometric depression at the centre of the storm was apparently not very great, though on the morning of the 23rd pressure at Chittagong fell nearly a quarter of an inch, but from the logs of vessels navigating the Bay during the advance of the storm, it would appear that the storm was rather a severe one, and very fierce winds and heavy squalls were reported. Warnings of the existence and advance of the storm were issued to the stations on the east coast, and with the advance of the storm to the north of Akyab the storm signals were hoisted in the Chittagong river and also in the Hooghly; but when it appeared that the storm was reaching the coast to the south of Chittagong, the signals in the Hooghly were lowered, and shortly afterwards the Chittagong signals were lowered.

This storm is a somewhat remarkable one in the history of Indian cyclonic storms, for there is scarcely any other case on record when at the latter end of November a storm has advanced from the extreme south of the Bay in a north-easterly direction, till it has reached the north-east angle of the Bay.

During the period of the formation and northerly advance of the storm, and particularly when it reached the northern half of the Bay, the weather conditions in South Bengal became very disturbed, skies clouded over rapidly and became almost overcast, temperature and humidity increased very considerably, and a few rain showers were reported; and when the storm reached the land, it gave general rain to the greater part of East Bengal, the rainfall in many instances being decidedly heavy, and thus on the 23rd instant the Chittagong district received an average fall of nearly four inches.

With the advance of the storm over the land, it apparently rapidly broke up, and weather conditions quickly became normal again; and from about the 24th to the end of the month, normal north-east monsoon weather prevailed over the whole of the Province. Temperature fell rapidly during this time, pressure became very high, skies became cloudless, and no rain was reported.

The variations of pressure for the month have been of the usual oscillatory character, except for the two periods described above during the formation and advance of the two cyclonic storms, when the oscillations were to a great extent masked by the greater changes due to these storms. At the commencement of the month pressure was distinctly above the normal, and the average excess pressure over the Province for the first week was about 0.05". In the second week also pressure was at almost all stations in excess of the normal, but the general excess was decidedly smaller than in the previous week. In the third week, at the southern stations, pressure was in defect owing to the influence of the storm; but at the northern stations the excess was rather more pronounced, and in the last week of the month pressure had become decidedly below the normal in East and South-West Bengal and Orissa, while it was only in very slight excess in the other districts. For the whole month pressure has consequently been in excess of the normal, and the average variation of the whole Province for the month has been an excess of 0.035 inch. The excess pressure has been most marked in the northern districts, particularly in North Behar, where at Durbhunga the excess has equalled 0.08 inch and at Purneah where it has been 0.06 inch.

Temperature during the first week of the month was below the normal in nearly all districts, the defect varying from 2.4° in Orissa to a slight excess in Chutia Nagpur. In the second week temperature was decidedly in excess in Chutia Nagpur and South Behar, while in other districts it was nearly normal. In the third week temperature had become in excess in all districts, the general excess being from 1° to 2°, while in the fourth week again temperature was decidedly in excess of the normal. The mean temperature of the month has consequently in most districts not varied largely from the normal. In Orissa, South-West Bengal and North Behar the temperature has been practically normal, while in East Bengal, South Behar and Chutia Nagpur it has averaged about 1° above the normal.

Rainfall has been confined to the two periods noticed in the meteorological summary for the month, and also to the districts which were influenced by the two cyclonic storms. North Bengal, the whole of Bihar, and South-West Bengal have been almost absolutely

Orissa. The average rainfall in East Bengal has been 1.58 inches, and in Orissa it has been 1.84 inches, but, as before stated, the distribution of the rainfall in these divisions has been uneven. In East Bengal the districts of Chittagong and Chittagong Hill Tract have received heavy rainfall, the amounts being about 7 and 5 inches respectively, whilst in the case of Orissa the districts represented by the stations of Gopalpore and Falee Poir have received the largest amounts of rain.

The following table gives the summary of the temperature and rainfall data of each of the seven Meteorological Divisions of the Province for the month of November 1885 :—

METEOROLOGICAL DIVISIONS.				TEMPERATURE.							RAINFALL.

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, S. G.'s Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ..

The total fall of rain from 6th to 12th December 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office..

The total fall from 1st January to 12th December 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ..

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 26 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

— fog, ☁ low.

"	11th	69.9	79.9	19.5	60.4	65.9	.585	63.4	80	"
"	12th	69.3	78.9	16.8	62.1	63.8	.543	61.3	70	"

The mean temperature of the seven days ... 69.3

The extreme variation of temperature ... 24.5

The maximum temperature ... 81.9

The mean relative humidity ... 76%

The total fall of rain from 6th to 12th December 1885 ... Nil

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 14th December 1885.

HENRY F. BLANFORD,
Meteorological Reporter to the Govt. of India.

MEMORANDA.

The table appended to this Memoranda furnishes the following particulars in connection with the mortuary statistics of the districts in Bengal for the month of October 1885 :—

1. That the deaths of 152,685 persons were recorded among a population of 66,163,884, representing an annual casualty rate of 27·60 per 1,000, against 26·40 per 1,000 in the preceding month, and 20·88 per 1,000 in the corresponding month of 1884, indicating, as compared with the last-named period, a considerable advance in the number of deaths registered.

2. That the following districts returned the highest proportions of deaths :—

Districts.			Districts.		
		Ratio per mille.			Ratio per mille.
Bhagulpore	...	58·92	Maldah	...	31·20
Shahabad	...	52·32	Hughli	...	30·24
Monghyr	...	51·00	Sarun	...	29·76
Gya	...	41·88	Purneah	...	28·60
Nuddea	...	38·16	Jessore	...	28·20
Patna	...	33·96	Chumparun	...	26·52
Murshidabad	...	33·60	Pubna	...	26·16
Mosufferpore	...	33·00	Hazaribagh	...	26·16
Durbhanga	...	32·64	Julpaiguri	...	25·08
Rungpore	...	31·92	Sonthal Pergunnahs	...	25·08

3. That the mortality from the principal diseases under record stood during the month under review as follows, contrasted with similar information for the corresponding month of the preceding year :—

			Ratio per mille during—	
			October 1885.	October 1884.
Cholera	2·52	·06
Small-pox	·01	·18
Fever	20·04	15·96
Bowel-complaints	1·08	·84
Injury	·60	·36
Other causes	3·12	2·52

indicating that there was an enhancement of mortality from every death-cause (excepting small-pox), prominently from cholera and fever.

4. That while the incidence of small-pox and bowel-complaints was, on the whole, normal throughout the Province, and injury and the maladies classed under the head of "Other causes" proved conspicuously fatal, the former only in the Cuttack district, viz. at 3·24 per 1,000 of population, and the latter only in the Sarun district, viz. at 12·00 per 1,000, cholera and fever displayed their greatest activity in the following districts :—

Cholera.			Fever.		
		Ratio per mille.			Ratio per mille.
Mosufferpore	...	11·52	Bhagulpore	...	41·88
Bhagulpore	...	10·32	Monghyr	...	41·52
Durbhanga	...	9·96	Shahabad	...	40·08
Chumparun	...	8·28	Gya	...	36·60
Shahabad	...	7·20	Nuddea	...	38·12
Purneah	...	4·92	Murshidabad	...	28·68
Cuttack	...	4·20	Rungpore	...	28·68
Maldah	...	4·08	Jessore	...	26·52
Monghyr	...	3·84	Maldah	...	25·44
Sarun	...	3·24	Pubna	...	24·24
Balasore	...	3·24	Patna	...	24·12
Hughli	...	2·40	Purneah	...	22·80
Hazaribagh	...	2·04	Julpaiguri	...	22·56
			Sonthal Pergunnahs	...	21·12
			Hazaribagh	...	21·12

5. That the mortality of the month under the heads of *Sex*, *Class* and *Age* stands as indicated below :—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	29·04	Christians	...	11·88	Under 1 year	...	189·44
Females	...	26·28	Hindus	...	29·76	1 and under 5 years	...	33·48
Ratio of male deaths to every 100 female deaths.	109		Mahomedans	...	24·24	5 " 10 "	...	16·20
			Buddhists	...	12·84	10 " 15 "	...	13·56
			Other classes	...	18·24	15 " 20 "	...	18·00
						20 " 25 "	...	19·08
						25 " 30 "	...	21·00
						30 " 35 "	...	26·52
						35 " 40 "	...	40·68
						40 " 45 "	...	67·92
						45 " 50 "	...	
						50 " 55 "	...	
						55 " 60 "	...	
						60 years and upwards	...	

B. LIDDESDALE, M.D., Deputy Surgeon-General,

Sanitary Commissioner for Bengal.

The 16th December 1885.

MORTALITY ACCORDING TO--

POPULATION.			DEATHS FROM—										RATIO PER 1,000 OF POPULATION PER ANNUM.										COMPARISON WITH PREVIOUS PERIOD.		DEATHS AMONG—		RATIO PER 1,000 OF POPULATION PER ANNUM.		Ratio of male deaths to every 100 female deaths.
Male.	Female.	Total.	Cholera.	Small-pox.	Revers.	Howel-complaint.	Injury.	Other diseases.	All causes.	Cholera.	Small-pox.	Revers.	Howel-complaint.	Injury.	Other diseases.	All causes.	Ratio of deaths per 1,000 of population in the previous month.	Ratio of deaths per 1,000 of population in the corresponding month of the previous year.	Male.	Female.	Male.	Female.

**R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for**

[illegible]

SUPPLEMENT TO THE CALCUTTA GAZETTE, DECEMBER 16, 1885.

MEMORANDA.

During the week ending 28th November 1885, the returns from the principal Municipalities in Bengal furnished the following results:—

1. That the birth-rate in these Municipalities amounted to 27·5 per 1,000 of population against the same proportion in the preceding week ending 21st November, and the death-rate 42·8 per 1,000 against 39·1 per 1,000, showing a sensible improvement in death registration.

2. That these events were returned in the highest proportions from the following Municipalities:—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Naraingunge	...	58·0	Puri	...	130·1
Bhagulpore	...	43·4	Naraingunge	...	91·1
Durbhunga	...	43·3	Serampore	...	64·7
Mosufferpore	...	41·4	Suburbs of Calcutta	...	60·0
Beauleah	...	39·4	Gya	...	59·5
Bali	...	38·6	Dacca	...	55·7
Comillah	...	38·6	Purneah	...	52·0
Howrah	...	34·9	Bhagulpore	...	49·8
Gya	...	33·5	Midnapore	...	43·4
Burdwan	...	30·5	Hughli	...	40·3
			Patna	...	39·2
			Chittagong	...	37·6
			Burdwan	...	35·1
			Beauleah	...	34·2
			Howrah	...	33·8

3. That the diseases specified in the table appended to this memoranda proved fatal at the rates exhibited below:—

	Ratio per mille during the weeks ending	
	28th November 1885.	21st November 1885.
Cholera	5·3	3·4
Small-pox
Fever	20·8	19·0
Bowel-complaints	7·2	6·7
Injury	·1	·4
Other causes	9·4	9·6

The noticeable feature indicated by the above figures is that the mortality from cholera and fever was sensibly higher during the week under notice in comparison with that during the preceding week.

4. That no deaths were registered from small-pox; that the mortality from violence was nowhere noticeably high; and that the other diseases enumerated above caused the highest mortality in the Municipalities mentioned below:—

Cholera.		Fever.		Bowel-complaints.		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri	79·7	Serampore	45·1	Dacca	13·0	Gya	21·1
Naraingunge	45·6	Purneah	45·0	Hughli	12·1	Midnapore	18·6
Suburbs of Calcutta	9·9	Bhagulpore	31·7	Suburbs of Calcutta	12·0	Dacca	14·9
Dacca	7·1	Beauleah	31·5			Suburbs of Calcutta	14·1
Midnapore	6·2	Puri	31·5			Patna	11·3
Howrah	5·7	Gya	29·4			Bhagulpore	10·9
Durbhanga	3·1	Hughli	25·5				
		Burdwan	24·4				
		Suburbs of Calcutta	24·0				
		Chittagong	22·5				
		Bali	21·1				

5. That the death-rates in relation to Sex, Class and Age were returned at the rates shown below:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	43·5	Christians	13·0	Under 1 year	271·0
Females	42·0	Hindus	44·9	1 and under 5 years	54·5
Ratio of male deaths to every 100 female deaths	117	Mahomedans	39·0	5 10	21·4
				15 20	18·5
				25 30	26·7
				35 40	30·9
				45 50	31·9
				55 60	38·6
				60 years and upwards	51·9
					102·7

Remarks on the fluctuation of principal staples carried over the East Indian Railway during the month ended 24th October 1885.

INCREASE.

Coal and Coke.—There have been increases in both the upwards and downwards traffic, and these were to be expected, as last year's traffic during October was very depressed. The upward increase is due to demands from foreign railways, and that in the downward traffic to good demand in the Calcutta market.

Piece-goods.—The increase in this commodity is due mainly to demands in connection with the Durga and Luckee Poojahs, occurring in 1884 in September.

Grain.—This is attributable to increase in demands for wheat and seed.

Wheat.—The increase in this staple is very satisfactory; the traffic was 7½ times as great as that of 1884, and about three times that of 1883.

Grain and Pulse.—Due chiefly to exports from the North-Western Provinces to Bengal to meet scarcity in the Lower Provinces.

Other Grains.—There has been a general increase in despatches from the North-West and stations on the Rajputana and Mysore Railway.

Hides and skins.—This increase is due to a good demand for export, and to stocks in Calcutta having been affected by the small arrivals from Eastern Bengal during a serious break on the Eastern Bengal Railway.

Salt.—This increase is chiefly due to despatches from Howrah and *via* Agra.

Sugar refined and unrefined.—The increases show no more than a revival of the traffic which, during 1884, was very poor.

Seeds.—The increase in seeds was chiefly in linseed and mustard seed, and was due to a good demand for export with steady prices.

DECREASE.

Leo, shell and refuse.—The decrease in these staples is partially due to the reduced rates given from September at the request of the manufacturers.

Railway materials, foreign.—This decrease is due to limited despatches from Howrah partially caused by the Durga Poojah Holidays.

ALLEN MEARA, Deputy Traffic Manager.

TRAFFIC MANAGER'S OFFICE, CALCUTTA, the 10th December 1885.

Weekly Return of Traffic Receipts on Indian Railways

AGRICULTURAL EXHIBITION AT KISHENGUNGE IN THE DISTRICT OF PURNEAH.

REVENUE DEPARTMENT—AGRICULTURE.

Calcutta, the 5th December 1885.

RESOLUTION.

READ—

Portions of the General Administration Reports of the Bhagulpore Division for 1882-83, 1883-84, and 1884-85, containing notices of agricultural exhibitions held at Kishengunge, in the Purneah district.

Letter from the Commissioner of the Bhagulpore Division, No. 2397R, dated 10th November 1885.

With the object of introducing improvements in agriculture and improved agricultural implements, and to encourage the breeding of a good class of cattle, an Agricultural Exhibition has been held at Kishengunge, in the district of Purneah, for three successive years. The exhibitions at Kishengunge appear to have attained a considerable measure of success, and there is no doubt that, by judicious management, such exhibitions are likely to become useful institutions.

The Commissioner of the Bhagulpore Division now reports that Sayyid, Atthi, the Zamindar of Khagra, in the Purneah district, who has before

Rs. 1,000, to be invested in Government Promissory Notes at 4 per cent., the interest of which he desires should be spent in providing two medals, to be awarded annually at the Kishengunge Agricultural Exhibition—

- (i)—To the owner of the best pair of plough bullocks, certified to have been used by the owner for plough work during the preceding 12 months; and
- (ii)—For the best show of any named kind of agricultural produce, the description of produce to be selected by the district officer.

The donor desires that the medals shall be called the “ Rivers Thompson ” medals.

Sayyid Atta Husain further offers a sum of Rs. 200 to be distributed in prizes for agricultural produce at the Exhibition to be held at Kishengunge in January 1886, and promises donations of Rs. 100 per annum for the two succeeding years for the same purpose. It is proposed that the medals and prizes shall be awarded by the Kishengunge Agricultural Exhibition Committee.

The Lieutenant-Governor accepts with much pleasure the liberal offer made by Sayyid Atta Husain, and desires to record his high appreciation of the very laudable efforts of the zemindar of Khagra to promote a better system of agriculture in his estates. The Lieutenant-Governor further recognises the kindly feeling which has prompted the wish to associate Sir Rivers Thompson's name with the annual award of medals at the Kishengunge Exhibition. If he declines this suggestion, it is only from the conviction that most people will agree that the donor's own name should be perpetuated in connection with this excellent project. The medals should be in the name of Sayyid Atta Husain.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette* and that a copy be forwarded to the Commissioner of the Bhagulpore Division for information and communication to the Collector of Purneah.

Ordered also that a copy of this Resolution, with copy of letter No. 2367R, dated 10th November 1885, from the Commissioner of the Bhagulpore Division, be forwarded to the Director of the Agricultural Department for information and favour of necessary action on paragraph 3 of the Commissioner's letter.

By order of the Lieutenant-Governor of Bengal,

A. P. MACDONNELL,

Secretary to the Government of Bengal.

ASSISTANT SURGEON BRIJ LAL GHOSE'S URDU TEXT-BOOK ON
SURGERY.

GENERAL DEPARTMENT—EDUCATION.

Calcutta the 16th December 1885.

RESOLUTION.

READ—

Letters from the Officiating Director of Public Instruction No. 5929, dated the 24th August 1885, and enclosures, and No. 1897, dated the 19th October 1885, regarding an Urdu Text-book on Surgery written by Assistant Surgeon Brij Lal Ghose, Rai Bahadoor.

In paragraph 5, clause 4 of the Government Resolution of the 13th December 1884, on the subject of vernacular Text-books for Medical Schools, it was stated that in Urdu the *vade mecum* of Assistant Surgeon Brij Lal Ghose, Rai Bahadoor, of Lahore, may be adopted as the Text-book on Surgery, but that the author should revise his work if he wishes it to maintain its place. Assistant Surgeon Brij Lal Ghose has since revised his book, and the new edition has been approved by the Medical Text-book Committee. The Lieutenant-Governor is now therefore pleased to declare that Assistant Surgeon Brij Lal Ghose's Manual is the approved Urdu Text-book on Surgery.

By order of the Lieutenant-Governor of Bengal,

A. P. MACDONNELL,

Secy. to the Govt. of Bengal.

ENDOWMENT MADE BY KUMAR GYANODA KANTA ROY AND
HIS TWO BROTHERS IN AID OF MAHOMEDAN EDUCATION IN
JESSORE.

GENERAL DEPARTMENT—EDUCATION—No. 429. •

Calcutta, the 17th December 1885.

RESOLUTION.

READ—

Endorsement No. 5M.E., dated the 25th November 1885, from the Commissioner of the Presidency Division, enclosing copy of a letter from the Magistrate of Jessore, reporting that Kumar Gyanoda Kanta Roy, Kumar Manoda Kanta Roy and Kumar Hemoda Kanta Roy, zemindars of Chanchira, have made over for the public use a plot of land with buildings lying south of the Jessore Zillah School, valued at Rs. 1,500, for the establishment of a Mahomedan hostel in connection with that school.

The Lieutenant-Governor has much pleasure in accepting the gift above named, and directs that the thanks of Government be conveyed to the donors for their liberality.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that copies of it be forwarded to the Commissioner of the Presidency Division for information, and for communication to Kumar Gyanoda Kanta Roy, Kumar Manoda Kanta Roy and Kumar Hemoda Kanta Roy, and to the Director of Public Instruction, for information.

By order of the Lieutenant-Governor of Bengal,

A. P. MACDONNELL,

Secretary to the Government of Bengal.

REPORT ON THE ZOOLOGICAL GARDENS, CALCUTTA, FOR 1884-85.

REVENUE DEPARTMENT—MISCELLANEOUS.

Calcutta, the 18th December 1885.

RESOLUTION.

READ—

- ▲The Report of the Committee for the management of the Calcutta Zoological Gardens for the year 1884-85.

The total income of the gardens during the year, including the Government grant of Rs. 20,000, amounted to Rs. 52,097 against Rs. 52,398 in 1883-84. From donations and subscriptions an income of Rs. 3,588 was derived against Rs. 550 only in the preceding year. Entrance receipts amounted to Rs. 8,511 against Rs. 13,045 in 1883-84. Government securities were sold to the value of Rs. 9,880, and of the other items of receipt the most important were by sale of animals Rs. 1,656, sale of fish and fishing Rs. 1,466, sale of milk Rs. 717, Fancy Fair receipts Rs. 1,627, rent Rs. 1,583, interest Rs. 790.

2. The expenditure of the year amounted to Rs. 50,685. The largest items were for establishment Rs. 8,611, food of animals Rs. 11,285, construction and repairs of buildings and roads Rs. 23,860. Only Rs. 931 were expended on purchase of animals against an average expenditure of Rs. 3,740 for the preceding four years; economy under this head was forced upon the Committee by the necessity of expenditure on account of constructions and repairs of buildings and roads which could no longer be postponed. It was on account of the lastnamed expenditure that it was necessary to sell half of the Society's invested securities. The most important works of the year were the repairs of the "Hermitage" and the renovation of the "Sonebursa" and "Cooch Behar" Houses, the construction of an iron granary, and of a new house for aquatic birds, and of a house for the nilgai, and the construction of a brick wall topped by an iron railing round the rhinoceros enclosure; the roads and footpaths were also much improved and the plants in the "Andool House" were rearranged.

3. The number of visitors who entered the gardens during 1884-85 was 120,813 against 188,532 visitors in 1883-84 and against an average number of 117,500 for the five preceding years. The Committee remark that "after due allowance has been made for the exceptional character of the year 1883-84, as that in which the International Exhibition caused an abnormal congress of visitors to Calcutta, the number of admissions during the year under report does not compare unfavourably with that of most of the previous years." The admission charge continued to be one anna on week days and up to 4 P.M. on Sunday, and 8 annas on Sunday evening. The Committee do not desire to return to the former higher rates of admission charges in the belief that the lower charges will advance the popularity of the gardens.

4. Though the Committee were unable to spend a large sum upon purchase of animals, considerable additions were made to the menagerie by presentations. These made up 248 out of the 337 acquisitions of the year. The most interesting additions were—

- | | |
|---|---|
| A young male hairy-eared rhinoceros (<i>rhinoceros lasiotes</i>) from Burmah; | |
| A Persian ibex (<i>capra aegagrus</i>); | |
| A pair of young grizzly bears (<i>ursus horribiles</i>); | } obtained by exchange from Mr. Rutledge of Calcutta. |
| A crowned crane from North Africa | |
| Four young tigers. | |

The Committee acknowledge with thanks the cordial co operation of several divisional and district officers in the work of collecting animals for the Zoological Gardens, but regret that they have not received the powerful assistance in this respect which they had hoped for from the appointment of Divisional Commissioners in Lower Bengal to be *ex-officio* members of the Society. The attention of divisional and district officers is invited to the instructions given in Bengal Government, Revenue Department Circular No. 11, dated 6th November 1880, and Judicial Department Circular No. 15, dated 24th

5. The dairy farm and cattle-breeding establishment opened last year were kept up during the year under review ; but since the close of 1884-85 the whole of the imported stock has unfortunately been lost by an outbreak of rinderpest. The loss is much to be regretted. The Committee promise to give details of their experiment in raising improved stock in their report for 1885-86.

6. In January 1885 the Committee asked that the Government grant to the gardens be raised from Rs. 20,000 to Rs. 36,000 per annum in order to enable them to meet the increasing expenses of the institution and to make necessary improvements and additions in the gardens and buildings. With reference to the financial pressure and to the many demands for works of a more pressing and important nature, it was not found possible to comply with the wishes of the Committee. After the close of the year, a grant of Rs. 1,800 was sanctioned for the maintenance of the dairy farm during 1885-86, but on account of the loss of the imported cattle this grant could not be utilised.

7. A proposal was made in July 1882 to form an Association under Act IV of 1882 for the management of the Zoological Gardens, and the proposed change in the constitution of the Committee which manages the institution was approved by the Government of India. Difficulties, however, were found in carrying out this intention, and the Lieutenant-Governor understands that the Committee do not desire to proceed with the scheme.

The Lieutenant-Governor has much pleasure in acknowledging the useful work done by the Committee during the past year.

By order of the Lieutenant-Governor of Bengal,

A. P. MACDONNELL,

Secretary to the Government of Bengal.

STATE AND PROSPECTS OF THE CROPS.

REVENUE DEPARTMENT—AGRICULTURE.

Calcutta, the 22nd December 1885.

RESOLUTION

READ—

Resolution in the Revenue Department, dated the 18th November 1884, giving a summary of the meteorology of the monsoon of 1884, and describing the agricultural condition of the Lower Provinces, and the prospects of the crops at the end of the monsoon of 1884.

The rainfall statistics for each district of the Lower Provinces for the six months from May to October 1885.

Read again—

The correspondence of the present year on the state and prospects of the crops and the condition of the people, and on the effects of the floods during August and September in South-West and Central Bengal and in parts of the Bhagulpore Division, and on the destruction of life and property caused by the cyclone and storm-wave in Orissa.

In the Resolution, dated 18th November 1884, recorded in this department by the Lieutenant-Governor, the character of the monsoon of that and the preceding year was described, and its effects on the harvests of 1884 was examined in detail. The conclusion to which that examination lead the

In the Burdwan Division—
Parts of the Burdwan district.
Parts of the Beerbhoom district.

Lieutenant-Governor was that the local areas specified in the margin gave more or less cause for anxiety on account of existing or apprehended scarcity of food owing to crop failure. Accordingly more than a year ago instructions were issued to ascertain with greater fulness and accuracy "the villages likely to be actually affected by distress in these local areas, the classes of people in each village likely to need relief, the best means of affording it, and the probable cost." Orders were also issued empowering local officers to meet with

adequate measures of relief any sudden emergency, should such arise.

It is satisfactory to have to record that no such emergency came to pass. The cold weather months of 1884-85 passed over without the occurrence of any noticeable event in the way of distress among the people or demand upon Government for assistance. The winter rice and the *rubbi* harvests, even where they were poorest, afforded the people seasonable employment and relief; while the expenditure from local funds on district roads and other local improvements was judiciously directed towards the same end. By degrees the areas calling for special care or attention from Government narrowed down. The winter rice harvest in Bogra was fair, and consequently the district soon ceased to give cause for concern. A similar remark applies to Nuddea, which, until the floods of August, stood outside the area in need of relief. The Maldah district in the early part of the year called for observation, but after the favourable *rubbi* harvest matters improved there and no relief operations were necessary. In some isolated tracts in Moorsshedabad the people were somewhat pinched, but there was nowhere any actual distress calling for Government aid. In Monghyr and Bhagulpore also a fair *rubbi* relieved the Government from its anxieties, and rendered relief measures unnecessary. In a report on the state of the country submitted to the Government of India in May last, the Lieutenant-Governor was able to state that, as far as the effects of the monsoon of 1884 were concerned, in the Patna and Burdwan Divisions alone did any reason for anxiety continue to exist. The anxiety in regard to the affected tracts in the Patna Division was always of a mitigated character and more in the nature of apprehensions for the future than of actual distress.

state briefly the character of the south-west monsoon of 1885, and its effects, so far as ascertained, on the crop prospects of the province generally and of the Burdwan division in particular.

The first quarter of the year was unusually dry, the cold weather rains being almost entirely wanting. The earliest rains fell towards the end of April, having been preceded by extremely hot, dry weather. From April till the middle of May nor'westers, attended with heavy rain, were of frequent occurrence everywhere except in Behar and Chota Nagpore, but there ensued an interval of dry weather with high temperature. The rainfall up to the end of May was deficient everywhere, except in Orissa.

The south-west monsoon set in early in June over the province with about normal strength, and gave good general rain in all districts. In the latter half of June storms were formed near the head of the Bay, the first of which passed through South-West Bengal into Chota Nagpur and thence into the North-West Provinces, and the second crossed the coast near Balasore, and then passed into Chota Nagpur, when it broke up. Rainfall in June was therefore very considerably in excess of the normal in Chota Nagpur. It was also slightly in excess in East, South-West and North Bengal, while Behar and Orissa only received about half their normal amounts.

In July the Bay of Bengal monsoon current continued fairly strong, while the Bombay branch of the current was apparently stronger than usual. Between the two currents interaction took place which produced very heavy rain in Behar and North Bengal. The result was that the rainfall in July was very considerably in excess in North Bengal, in excess in Behar, in about normal quantity in Chota Nagpur and South-West and East Bengal, while in Orissa there was a decided deficiency.

In August and September, however, a great increase in the strength of the monsoon took place, and over the greater part of the province excessive rainfall was received during this period. No less than nine atmospheric disturbances occurred in Bengal during August, and all brought heavy rain. South-West Bengal, South Behar and Chota Nagpur received an excessive rainfall; North Behar and East Bengal also received falls in excess of the normal; Orissa received a normal fall; and North Bengal was slightly in defect. It will give some idea of the extraordinarily heavy rainfall in August when it is stated that the fall in the Midnapur division was from 22 to 23 inches in excess of the normal; in the Chittagong district it was 21 inches in excess; and in the 24-Pergunnahs, Bankoora, and Saugor Island districts the excess fall received was from 15 to 20 inches.

The rainfall in September was largely in excess in Behar; it was also largely in excess in North-East and South-West Bengal; while it was about normal in Chota Nagpur and Orissa. Speaking generally, over the whole province the rainfall in this month was about 83 per cent. in excess of the normal. As the rainfall of the two months August and September caused exceptionally heavy floods over large areas, it may be interesting to compare the actual fall in various portions of the province during these months with the normal fall. The timely distribution of the rainfall in the various districts is of importance, and in the table below the rainfall for each of the weeks in these two months in each meteorological division is given as a percentage of normal fall for the period:—

The actual rainfall expressed "as a percentage" of the normal fall of the period.

At the commencement of October the south-westerly winds very rapidly fell off in strength, and though they gave fairly general rain to the province for the first two or three days, yet they practically ceased to give general rainfall from about the 3rd. Later on in the month atmospheric disturbances which formed in the Bay gave heavy rain to the Orissa Coast, and gave light general rain to the southern districts for some days. The rainfall in October was therefore below the normal in all districts, the fall in Behar and North Bengal being particularly scanty.

As a whole, the south-west monsoon of 1885 has been a strong one, though it was perhaps a little late in establishing itself, and fell off in strength very early and rapidly. It was particularly strong in August and September, and also strong in July. On account, however, of its early commencement and comparatively early close, the actual amount of rain received during the six monsoon months has not differed largely from the normal. Thus, while for the whole of the six months—May to October inclusive—South-West Bengal, Chota Nagpur, and East Bengal have received falls slightly less than 10 per cent. in excess of the normal, Behar, North Bengal, and Orissa have received falls slightly below it, varying from a defect of 4 to 15 per cent.

The effect of the rainfall on the crops can be stated with sufficient precision in general terms. The *bhadai* and *aus* crops of 1885 are generally ascertained to have yielded a fair outturn throughout the Lower Provinces, except in some inundated tracts. The prospects of the *aman* crop are everywhere favourable, and in many districts are excellent, except where it was lost on the deeply inundated low lands in Moorahedabad, Nuddea, Jessore, Hooghly, Howrah and Midnapore and parts of the Bhagulpore division. In most parts of the districts last named, however, it is certain that an unusual extension of cultivation of the *rubbi* crops will largely compensate for the loss of the lowland rice. So far the prospects of next year's *rubbi* are everywhere excellent.

Thus in reverting to the consideration of the relief administration of the year it will be apparent that no misgivings need be entertained in regard to the future. The rainfall of the past year, though it has, as will appear later, on, brought heavy loss in property to large tracts of Central and South-Western Bengal, has assured to the Province, as a whole, an excellent winter harvest, with the promise of an equally good *rubbi*. Indeed, in the tracts affected by floods and inundations, the *rubbi* will, according to the latest accounts, be so abundant as in a measure to make good the loss that the floods have entailed.

It has been stated that during the spring it became necessary to take systematic measures to relieve distress in the Burdwan division. Measures first became necessary in certain isolated tracts in the Burdwan and Beerbhoom districts, but later on distress appeared in Bankoora, and there also it became necessary to administer relief. In the relief of distress in the Beerbhoom district the Government was, early and effectively seconded by the Indian Association and the Sadharan Brahmo Samaj, whose delegates were early in the field, and who afforded the local officers valuable assistance, while also distributing in an effective yet economical manner the funds which private charity had placed at their disposal. It has already been the Lieutenant-Governor's pleasurable duty to acknowledge and bring to the notice of the Government of India the praiseworthy action of these Associations during the period of distress; and in this final review of the relief administration, Sir Rivers Thompson desires to place on record his sense of the obligation under which these Associations and their delegates have placed him by their charitable and patriotic exertions. Good work was also done in Beerbhoom by two local Associations, and among the semindars of the district, Babu Budh Singh and Babu Bishan Chand Dadhuria and Rao Dhanpat Singh maintained at much cost kitchens where a large number of poor and helpless persons were fed daily.

The classes who stood in need of relief were, as might have been expected,

highest price touched by rice, which is the grain usually eaten in those districts was 13 seers 14 chittacks in Burdwan, 13 seers 12 chittacks in Beerbhoom, and 16 seers 4 chittacks in Bankoorah. These are not famine rates, and the difficulty lay in the fact that the failure in the local crops restricted the labour market and forced on Government the necessity of providing employment for those whose circumstances prevented them from emigrating in search of work.

The relief operations of Government in the affected tracts fell under three main heads—(a) advances under the Land Improvement and Agricultural Loans Acts; (b) Public Works; (c) gratuitous charitable relief. Under the first-mentioned mode of relief administration Rs. 1,25,000 have been advanced in the Burdwan, Bankoora, and Beerbhoom districts. Some doubt was expressed by local officers and others as to the utility of the Agricultural Loans Act in Bengal, and some objections were offered to the extension of the Act to these Provinces. The experience of the last few months has shown how admirably suited the Act is to such circumstances as the Government had to deal with on the occasion under notice.

The Public Works system of relief was carried on by grants made from time to time in aid of the District Road Cess funds, and by special grants for excavation of tanks, &c., which did not fall properly within the province of Road Cess Committees to execute. The grants made since the 1st April 1885 to district funds for relief works amounted to Rs. 7,000, while the special grants for public works of the nature just mentioned reached a total of Rs. 22,000. It is believed that the districts have benefited permanently from the improvement in communications and water-supply which this expenditure has effected. Under the head of charitable relief, the accounts now before the Lieutenant-Governor show the expenditure, from the 1st of April last (when charitable relief on a systematic scale became necessary), to have amounted to Rs. 42,000. Of this sum, Rs. 24,100 was spent in Beerbhoom, Rs. 11,500 in Bankoora, Rs. 7,000 in Burdwan. These sums were, as suggested above, largely supplemented by expenditure from funds subscribed by the public and expended through the unofficial agencies, to whose effectiveness testimony has already been borne.

Besides the methods of relief enumerated above, there were other subsidiary methods, which it is unnecessary to do more than glance at on this occasion. For instance, chowkidars who, in these districts, are often paid by grants of service land, suffered with the rest of the agricultural population. For the relief of those public officers whose duty prevented them from leaving their villages in search of employment special measures of relief were devised. In like manner, special measures of assistance were set on foot to enable the women of the better classes, who could not go abroad in search of employment, to earn a livelihood at their own homes. These and the more regular operations cost the Government, from the 1st of April last to the end of November, a total sum of Rs. 1,96,000.

In the administration of all measures of relief it was sought from the beginning to adhere to the provisions of the Famine Code. The unofficial agencies for the distribution of charitable relief were satisfied with giving a daily dole of food, somewhat less than that prescribed by the Code, and some local officers were disposed to act likewise. No deviation, however, from the Code scale was sanctioned, the Lieutenant-Governor being convinced that, from a scheme drawn up with the care and deliberation which was bestowed on the Famine Code, no deviation should be lightly permitted. The following statement shows the daily average number of persons receiving charitable relief in each of these districts through Government agency and through private agency, as far as was known, in the months from May to September 1885:—

With the fall of normal rain in June in Burdwan and Bankoora, and abundant rain in Beerbhoom in July, all apprehensions of another failure of crops were removed, and the numbers of persons receiving charitable relief began steadily to diminish. In Bankoora closing of relief centres began from the 30th September, and in the middle of October reports of prospects in all three districts continuing to be favourable, the Lieutenant-Governor ordered that charitable relief administration should cease from the 10th November; relief works remaining open, where necessary, till the 1st December, by which date harvests were everywhere in active operation.

The success of the relief operations in the prevention of mortality from want of food, has been, the Lieutenant-Governor is glad to say, complete. From time to time reports, sometimes of a most circumstantial character, of mortality from starvation reached the Government, but these rumours were on investigation in every case proved to be without foundation. While acknowledging the assistance which the newspaper press had rendered to the Administration by bringing to notice facts concerning the condition of the people in the tracts suffering from scarcity, the Lieutenant-Governor found it necessary to call attention to the grave responsibility incurred by journalists who gave currency to statements which were not only false, but, there was reason to think, put forward with interested and injurious motives. There is perhaps, in the whole range of Executive Government, no more delicate or difficult task than the due administration of relief in times of scarcity. The Government has not to look only to the preservation of the lives of the people, but also to the economical administration of relief in the interests of the tax-payers and to the salvation of the spirit of self-help and self-reliance among those in receipt of relief. The destruction of that spirit would be the strongest condemnation of any system of relief. In such an arduous undertaking the hands of the Government are not strengthened by the propagation of false reports, which are calculated to excite distrust of the Government and to produce panic among the people.

FLOODS IN CENTRAL AND SOUTH-WESTERN BENGAL.

The Lieutenant-Governor now turns to consider the effects of the floods which occurred during August and September 1885 in South-West and Central Bengal, and in parts of the Bhagulpore Division. These floods were caused by the excessive rainfall of August and September, details of which have been given above. The Ganges rose to an unusual height at the point where it bends to the south and inundated parts of the districts of Maldah, the Sonthal Pergunnahs, North Bhagulpore and Purneah in the Bhagulpore Division. The great rivers into which the Ganges divides as it passes through Central Bengal also rose to unusual heights and spilled in destructive floods over Central and South-Western Bengal. The total area affected by serious floods is estimated to have been from 3,500 to 4,000 square miles.

In the Bhagulpore Division the damage done was not very extensive. In Maldah the *bhadoi* crop over about 100 square miles of country was to a large extent destroyed, and this caused temporary distress to the inhabitants of the locality which was flooded. Accordingly a grant of Rs. 16,000 was made for relief operations, and since then matters have rapidly improved. There is every promise of an excellent *rubbi* harvest, and no further anxiety on account of the district need be felt. In the Sonthal Pergunnahs, North Bhagulpore and Purneah the inundated areas are small, and the injury to crops of no considerable significance. Small sums, to relieve cases of urgent distress, have been placed at the disposal of the local officers; but the promise of a good *rubbi* harvest, which the silt deposited by the floods everywhere give, has put the people in heart and established their credit with their *mahajuns*. In these localities floods are of normal occurrence, and though the recent floods were unusually higher, the damage they have caused was not such as to call for any systematized relief operations on the part of Government.

chiefly the Bagri or low-lying lands; while the Rarh or up-lands, which suffered in previous years from scanty rainfall, have been benefited by the heavy rain and partial flooding. For the immediate relief of distress in this district, the country was parcelled off into relief circles, and grants of Rs. 25,000 for agricultural loans and of Rs. 1,000 for charitable relief were made, these sums being in addition to those raised and received for the Inundations Distress Relief Committee. By the beginning of October the floods had subsided except in the very low lands. The jute and mulberry crops were, for the most part, saved, and *kalai*, which was most extensively grown, promised an abundant harvest at the end of November. The Moorshedabad district was one of those visited by the Lieutenant-Governor last September, and the impression left on Sir Rivers Thompson's mind, after personal inspection of the locality, was that, though much temporary hardship and discomfort had been caused to the cultivating classes, the floods had done them little or no permanent harm, and, in fact, had ensured to them for the next few years crops far more abundant than those which they have lost. This forecast seems likely to be realized, for the Magistrate, writing on the 7th instant, says:—

"The harvesting of the *amun* rice is now going on, and in the *Rarh* the yield will be over the average, although the early cessation of the rains has caused some damage. In the lower lands, too, a bumper crop will be reaped. Export from the *Rarh* has already commenced, and the Sub divisional Officer of Kandi reports that the ryots have, as a rule, cleared off all their arrears of rent. The *kalai* crop will shortly be harvested, and there will be a bumper outturn. There is a good crop of mulberry and sugarcane, and the cold-weather crops are doing well.

"Distress appears to have entirely disappeared: the labouring classes are finding sufficient employment in the harvest operations now in progress, and the only class that now asks for help is the beggar class. As those on whose charity they used to live are again in the enjoyment of prosperity, there is no longer any reason why professional mendicants should be a charge on public funds."

The Lieutenant-Governor is glad to be able to add that there has been no abnormal mortality among the cattle, nor any unusual sickness among the people of the district, while the price of food-grain is approaching its normal cheap level.

A final report of the effects of the floods in the Nuddea district has now been received from the officer, Mr. Melitus, who was placed on special duty to enquire into the extent of the floods and to distribute loans for the relief of distress. Mr. Melitus estimates the whole area affected by unusual floods at 2,194 square miles, and he classifies the inundated tracts into—Parts benefited by the floods, i.e., where the injury to the standing crops was slight and not to be compared with the compensating advantages; these parts extend to 996 square miles. Parts where there was considerable loss, but where it is generally admitted that the ryots will be more than compensated for all loss after harvesting their *rabbi* crops; these cover 797 square miles. Lastly, parts where the greater portion of the crop was destroyed, and where, considering the injury to houses, loss of cattle, &c., the loss will probably not be compensated for by the increased *rabbi* outturn of this season; these parts are 401 miles in extent, and are situated chiefly in the Sudder and Kushtea sub-divisions. Mr. Melitus writes—

"There were two lines of inundation, which have hitherto been known as the north and south zone. The north zone comprises the direct floods of the Ganges and of the Matabhanga and connected rivers, and affected Kushtea and Choosadanga sub-divisions, and Meherpore sub-division east of the Bhairub. The flood was not severe, and was beneficial except in parts of the Kushtea sub-division. The south zone includes the floods of the Bhagirutha and the Jellinghee and the cross country floods from the Lalitakuri side, affecting Meherpore sub-division west of the Bhairub, the whole of the Sudder, and a small part of Ranaghat. The inundation on this side was severe and destructive, but over nearly two-thirds of the area flooded; the injury will be compensated for by this year's *rabbi* crop

This inundation has been more felt than that of 1879, as it followed three successive bad years, and when it came there was very little stock in hand, though there were pri-

ant autumn crop of rice, is the most important crop of the year, and in the sub-division it is estimated by Mr. Melitus to have yielded no larger return than from 5 to 6 annas. The yield of the *aman* or winter rice will, it is feared, not exceed a three-anna crop in this part of the district. The Kushtea sub-division fared well, as there the *aus* was a ten-anna crop and the *aman* not much, if at all, less. In the rest of the district the crops were not much under the average. *Kalai* and the *rabbi*, or spring, crops everywhere promise well, and it is satisfactory to learn that *rabbi* cultivation this year is double that of ordinary years.

With regard to the condition of the people, there can be no doubt that there has been much general discomfort on account of loss of houses and personal property, while in the tracts where most damage was done there has been distress, nowhere, however, amounting to starvation, among the poorer classes. The district has rapidly recovered from the effects of the floods, and there is now no pressure anywhere which calls for help, except in a portion of the Sudder sub-division. Here Mr. Melitus has recommended that charitable relief on a small scale and some relief works should be established until the *rabbi* is harvested. This recommendation has been accepted by Government. Grants of Rs. 25,000 for agricultural loans, Rs. 5,000 for relief works, and Rs. 2,000 for charitable relief, have been sanctioned, and local subscriptions have also been raised for the relief of distress. Prices of food are no higher than last year, and it is to be hoped that, with the ripening of the *rabbi* harvest, all necessity for assistance will have disappeared. Even as the case now stands, it is well within the capacity of the district staff to deal with, and need not be a ground of anxiety to the Government or to the public.

Jessore.—Four hundred square miles of country were more or less flooded in this district, and much of the *aman* crop is said to have been destroyed in the Bongong sub-division, where also many houses were injured. Most of the *aus* crop, which was a good one, and of the jute crop, had been reaped before the floods. To meet immediate wants, a sum of Rs. 1,500 was placed at the Collector's disposal for charitable relief, which, in addition to local subscriptions which were raised, has proved sufficient to meet the requirements of the case. A small grant for agricultural loans was also made. The Commissioner has since visited the district, and has reported favourably as to its condition, and stated that there is no need for relief works. The district may be considered as past its difficulties.

Burdwan.—In the Burdwan district the latest report states that only a small tract of about 28 square miles of country were submerged chiefly by the overflow of the Bhagiruthi river, but in this area 15,000 bighas of *aman* rice and 10,000 bighas of *aus* rice were almost entirely destroyed. The land submerged, however, did not suffer from last season's drought, and the cultivators were therefore able to withstand the effects of the inundation. It is believed that the inundations will be of great benefit to the *rabbi* cultivation.

Midnapore.—There were two floods in this district. The first flood was chiefly confined to the basin of the Selai river, which burst its banks, flooding Ghattal town, destroying many houses, and overflowing the neighbouring country. Later on the waters of the Selai and of the Kusai rivers again rose and flooded the western portion of the district, breaching the embankments in many places. The Commissioner, summing up for the whole district, estimates that about 1,000 square miles were flooded, of which some 750 square miles were under cultivation. Of the cultivated area, it is estimated that 150,000 acres of rice were destroyed, 105,000 acres damaged, while 225,000 acres escaped without injury. The loss of human life was small (only three persons are mentioned as having been drowned and two persons as having been killed by the falling of a house), but some loss of cattle is reported. The loss of houses and the damage done to public roads were very great. Outside the flooded area an excellent rice crop is everywhere looked for, and in the area of inundation ~~here~~ paddy will be grown. The Commissioner writes: "The district return will therefore be very little (if at all) below 12 annas. Rice will be cheap, and there will be good demand for labour." Grants of Rs. 10,000 for agricultural loans and of Rs. 2,500

amounting to Rs. 6,500 were also raised for the latter purpose. Relief committees were organised where needed, and the latest accounts seem to show that the district is rapidly emerging from its difficulties.

Hooghly.—In this district the flood was heaviest in the Jehanabad subdivision, in which an area of about 233 miles suffered from serious inundation. In the Sudder and Serampore sub-divisions there was some loss of crop in low lands, tempered with corresponding gain in high lands. The loss of the *aman* crop is, however, an almost annual occurrence in parts of this district on account of the floods of the Damuda; and as a great portion of it is sown somewhat speculatively, its loss is not severely felt. No loss of human life occurred, and few cattle were drowned, but there has since been some mortality among the cattle on account of want of fodder. The damage done to houses was not great and no larger grants than Rs. 1,500 for charitable relief and Rs. 2,000 for agricultural loans have been sanctioned by Government.

Howrah.—In this district the latest estimate states that about 213 square miles of country were inundated, and that in two-thirds of this area the rice crop was lost. The sugarcane, jute, and vegetable crops are also said to have been destroyed over about 12 square miles more, while it is reckoned that about 15,000 houses have fallen, or are likely to fall, on account of damage done by the flood waters. The loss of the rice crop will be to some extent made up by an extension of *boro* rice cultivation, but the whole outturn of rice will be only six annas in the flooded area. Only one life is known to have been lost in the floods. Subscriptions for the relief of distress were raised in this district and in Hooghly, and a grant will be made, if necessary, for agricultural loans. The latest reports shew that the district has recovered, and that no anxiety need be now entertained in regard either to it or the Hooghly district.

A recommendation which has been received from the Commissioner of Burdwan that grants shall be made by Government in aid of the Road Cess funds of the Midnapore, Hooghly and Howrah districts is under the Lieutenant-Governor's consideration.

The preceding remarks exhaust the information which on this occasion the Government has to communicate to the public. They shew, as the result of careful and detailed enquiry, that no permanent injury whatever has been caused to the country by the recent floods. On the contrary, indeed, they show that, although there has been much discomfort and a great loss of personal property, there has been no loss of life, no considerable loss of cattle, while the coming harvests will be according to universal promise of such abundance as to more than compensate on the whole for the loss in moveable property that has occurred. The districts affected by the floods have everywhere shown great recuperative powers, which indeed were not unexpected by the Lieutenant-Governor, who remembers a similar display of patient self-reliance, and timely energy on the part of the people when nearly the same tract of country was afflicted with no less destructive floods in 1871. In conclusion, the Lieutenant-Governor desires to express his thanks to the officers who have zealously conducted the relief operations to a successful issue. He is especially indebted to Messrs. Coxhead, Anderson, Fiddian, Farrer and Melitus for their exertions in this cause. Sir Rivers Thompson also earnestly thanks those Public Associations and private gentlemen who, during the relief operations consequent first on crop failure and afterwards on the floods, have given active assistance to the Government. In an early part of this Resolution, mention has been made of the help given by the Indian Association. Here special reference is necessary to the co-operation afforded by the Flood Relief Committee, which by the Resolution of the 29th September the Lieutenant-Governor appointed to collect subscriptions and organise relief for those forms of distress with which Government agency cannot adequately cope. This Committee has acted in hearty co-operation with the local officers, and their exertions have been successful in the relief of persons who have lost their houses and moveable property. The Committee have received up to date subscriptions amounting to Rs. 49,086, including sums collected in Bombay, in Assam and at Lahore. Out of these funds allotments have been

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 19th December 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
SUNDERMAN DIV.	1 Burdwan, Dec. 19 '85	0.01	Weather—seasonable. Outturn of <i>amun</i> excellent. <i>Rubbee</i> doing well. Price of rice 12 to 20 seers per rupee.
	Raneegunge	0.01	
	2 Bankoora, " 19 "	Nil	Weather—cold and cloudy; threatening rain. Greater portion of <i>haimanti</i> paddy now gathered. New rice has taken its way to market. Winter crops growing splendidly. General health good.
	3 Beerbhoom, " 19 "	Nil	Weather—cloudy and warm for the season of year. <i>Amun</i> crop is being harvested; an average outturn expected. <i>Rubbee</i> crops sown. No material change in prices of food-grains. General health satisfactory.
	4 Midnapore, " 19 "	Nil	Weather—cloudy with fair north wind. Harvesting of <i>amun</i> progressing in all parts of the district. Prospects of <i>rubbee</i> crop fairly good. General health good, except that cholera is reported to be breaking out in thana Bhogobanpore and Raghunathpore in the Contai sub-division.
	5 Hooghly, " 19 "	Nil	Weather—cold; in latter part of week cloudy. <i>Amun</i> is being reaped; outturn good. Prospects of <i>rubbee</i> crops continue to be good. A few cases of cholera in the Sudder and Serampore sub-divisions.
PRESIDENCY DIV.	Howrah, " 21 "	Nil*	Weather—cloudy and sultry. <i>Amun</i> crop nearly all reaped. <i>Boro</i> rice being transplanted.
	<i>Central Districts.</i>		
	6 24-Pergha, Dec. 21 '85	Nil*	Weather—seasonable, but cloudy. Prospects of <i>amun</i> crop, except in inundated parts, good. <i>Rubbee</i> crop doing well. Public health generally good, though cases of cholera are reported from Diamond Harbour.
	7 Nudda, " 19 "	Nil	Weather—seasonable. The winter rice which escaped the flood is nearly all harvested with a very full outturn. Pulse crops also, which are largely cultivated in this district, are yielding very well. Mustard is in excellent condition. Public health good.
	8 Khoorna, " 19 "	Nil	Weather—clear and rather warm. Late rice harvest continues. Winter crops doing well. Some cases of cholera reported.
	9 Jessore, " 19 "	Nil	Weather—seasonable; latter part of week foggy. Half of <i>amun</i> crop harvested; prospects favourable. Winter crops doing well. Price of rice falling. Cases of fever reported here and there.
RAJSHAHY DIV.	10 Moorshedabad, " 19 "	Nil	Weather—mild and cloudy. <i>Amun</i> rice still being harvested; outturn good. Cold-weather crops all doing well. Public health good. Common rice selling at from 17 to 19 seers per rupee.
	11 Dinagore, Dec. 19 '85	0.16	Weather—fair and cool. Winter rice is being harvested. Cutting of sugarcane also commenced. Rice selling at about 22 seers per rupee, but in Patnitol it is 35 seers to the rupee.
	12 Rajshahye, " 19 "	Nil	Weather—cloudy. Harvesting of <i>amun</i> paddy continues. Prospects of winter crops fair. A shower of rain would do good. Fever still general, though not severe.
	13 Rungpore	0.25	Weather—cloudy and cool. Harvesting of <i>amun</i> paddy going on vigorously.
	Nilphamari	0.36	Prospects of <i>rubbee</i> crops good. Mustard in flower. Potatoes promise well. Sporadic cholera in different thanas. Fever less prevalent.
	Kurigram	1.07	
LACCA DIVISION.	Gaibanda	Nil	
	14 Bogra, " 19 "	Nil	Weather—still cold. Two slight shocks of earthquake on morning of 14th and afternoon of 18th. State and prospects of crops continue good. Public health fair, except that there are still a few cases of cholera in certain villages.
	15 Pubna, " 19 "	Nil	Weather—rather warm; overcast at times. <i>Amun</i> still being reaped. Winter crops good. Rather more fever in Serajgunge sub-division, and some cholera near its head-quarters.
	16 Darjeeling, " 19 "	0.71	Weather—cold and wet. Prospects of crops good. Public health good.
	17 Julpigoree, " 19 "	Nil	Weather—cold with drizzling rain. Condition of all crops good. Cattle-disease continues in the Alipore sub-division. Public health good.
	<i>Eastern Districts.</i>		
LACCA DIVISION.	18 Dacca, Dec. 19 '85	Nil	Weather—fine and cold. Harvesting of <i>amun</i> paddy and sugarcane going on. Planting of <i>boro</i> paddy commenced. Winter crops doing well. Sporadic cholera reported from parts of the district; public health otherwise good.
	19 Farreedpore, " 19 "	Nil	Weather—seasonable. <i>Amun</i> crop still being harvested. Prospects of cold-weather crops good. Fever prevailing in parts of the district. A few cases of sporadic cholera reported from some places in the interior.
	20 Backergunge, " 17 "	Nil	Weather—seasonable. Paddy harvest has begun favourably. Fever continues to prevail.
	21 Mymensingh, " 18 "	0.01	Weather—cloudy; rather warm. State of crops good. Some cases of cholera reported from south-east of district.
TACSONE DIV.	22 Chittagong	Report not received.
	23 Noakhelly, Dec. 18 '85	Nil	Weather—seasonable. Harvesting of rice crop and preparation of ground for cold-weather sowing fairly progressing. Prospects fair. General health, with exception of a few solitary instances of cholera, good.
	24 Tipperah, " 17 "	Nil	Cold clear weather. Three-fourths of paddy reaped. Ploughing proceeding for spring crops. Cold-weather crops—

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BHAR.			
PATNA DIV.	26 Patna, Dec. 19 '85	1-16	Weather—cloudy; a slight fall of rain, more expected. Harvesting of rice still continues. <i>Rubbee</i> crops doing well. Poppy sowing still continues. Early sown seeds germinated fairly, and the prospect is good. Public health on the whole good.
	Dinapore	1-05	
	27 Gya, " 19 "	2-10	Weather—cool and cloudy. Rice crop, which is good this year, is nearly all harvested. Prospects of <i>rubbee</i> crops and of poppy good. General health good, though some fever and cases of small-pox are reported.
	28 Shahabad, " 19 "	2-17	Weather—cloudy throughout the week; drizzly at intervals with occasional showers. Rain beneficial for <i>rubbee</i> crops and poppy.
	Buxar	0-89	
	Sasseram	2-50	
	Bhabuah	2-8	
	29 Durbhunga, " 19 "	0-63	Weather—cloudy. Harvesting of paddy still going on. <i>Rubbee</i> greatly benefited by rain. Tobacco and poppy look promising. Prices falling. Public health generally good.
	30 Mozufferpore, " 19 "	0-26	Weather—cold and cloudy with occasional drizzle. Harvesting of paddy going on. <i>Rubbee</i> and poppy doing well. Rain has benefited the standing crops. Public health good.
	Hajipur	0-58	
BHAUGULIA DIV.	Sitamarhi	0-05	Weather—cool and cloudy. Harvesting of paddy progressing. Bulk of the crop has been harvested with good results. Cold-weather crops promising. Prospects of poppy continue favourable. The late rain has been very beneficial, but if the cloudy weather continues any longer, it will injuriously affect mustard and other oilseeds now in flower.
	31 Saran, " 19 "	0-96	
	Sewan	0-35	Weather—cloudy with showers. Harvesting of paddy in progress. Prospects of <i>rubbee</i> and poppy crops promising. Prices of food-grains have fallen slightly. Public health fair.
	Gopalgunj	0-25	
	32 Chumpana Bettiah, " 19 "	0-48	Weather—cold and cloudy. Harvesting of <i>aghani</i> paddy nearly completed. Rain very beneficial to <i>rubbee</i> crops. Prices stationary. Public health good.
	Bettiah	0-46	
	33 Monghyr, Dec. 19 '85	0-62	Weather—cloudy throughout the week. Prospects of crops continue good. Prices falling. Public health good.
	Begusarai	0-58	
	Jamui	0-13	
	34 Bhagulpore, " 19 "	0-26	Weather—cold and cloudy. Light showers on two days. Mustard, tobacco, and other cold-weather crops give very good promise, and will be benefited by rain. Late rice is being harvested.
Banka	0-21		
Soopole	0-10		
35 Purnea, " 19 "	0-26	Weather—cloudy with occasional traces of rain. <i>Haimanti</i> rice is still being reaped, yielding a full outturn. <i>Kalai</i> pulse is ripe and is a good crop. Other standing crops thriving. Average price of coarse rice 20 seers per rupee. Public health good.	
Kishengunge	0-12		
Arrareah	0-14		
36 Maldah, " 19 "	0-06	Weather—cold and cloudy with drizzling rain. Harvesting of rice continues actively in all parts, yielding a fair crop. To-day's (19th) rain will do good to <i>rubbee</i> crop, especially to wheat. Prices of food-grains easy. Health excellent.	
Chauchal	0-13		
Shibganj	0-2		
Gazol	0-15		
37 Sonthal Perghe, " 19 "	0-23	Weather—seasonable. <i>Sarad</i> crop being cut and garnered with fair outturn. <i>Dalua</i> and <i>rubbee</i> crops doing well. Price of rice almost unchanged. Cholera still prevails in some parts of Jajpur and Kendrapara sub-divisions. Fever prevalent in town of Cuttack.	
Deoghur	0-16		
Godda	0-1		
Rajmehal	0-06		
Pakour	0-08		
ORISSA.			
ORISSA DIV.	38 Cuttack, Dec. 18 '85	Nil	Weather—seasonable. Slight rain has fallen almost all over the district, causing no damage to standing crops. <i>Sarad</i> rice is being reaped. <i>Dalua</i> crop is being sown. <i>Rubbee</i> crops progressing well. Relief works going on in the Chilka tracts. Common rice sells at an average of 20 seers 13 chittacks per rupee in the Sudder sub-division, and 20 seers 12 chittacks in the Khoorda sub-division. A few cases of cholera reported in places. Cattle-disease in pergunnah Sarai. Fever in the town.
	39 Pooree, " 16 "	0-30	
	Khoorda	0-02	Weather—cold and cloudy. Harvesting of rice continues in all quarters. Prospects of <i>rubbee</i> crops favourable. Some cases of cholera reported from town and other parts of the district; otherwise public health good.
40 Balasore, " 18 "	Nil		
CHOTA NAGPORE.			
South-West Frontier Agency.			
41 Hasaribagh, Dec. 18 '85	2-65	Weather—cold and cloudy. Paddy harvest still continues in some parts of the district. Prospects of <i>rubbee</i> and poppy crops much improved by rain. General health good.	
42 Lohardagga, " 19 "	0-22	Weather—cold and very cloudy. Paddy harvesting still continues. The little rain in the week has done much good to <i>rubbee</i> crop. Prices steady. Public health generally good.	
43 Singhbhum, " 18 "	0-30	Weather—more or less cloudy throughout the week. The little rain that fell will do good to <i>rubbee</i> crops. Rice has been cut and a 16-anna yield reported from almost every part of the district. <i>Til</i> , <i>sergoja</i> , <i>urid</i> , <i>kurtki</i> , and <i>moong</i> are being reaped. Prices steady. General health good.	
44 Sanbhum, " 19 "	0-20	Weather—warm and cloudy. All crops doing well. Harvesting of <i>aman</i> nearly completed. Cattle not falling at from 24 to 32 seers per rupee. Public health good.

The mean temperature of the seven days

The extreme variation of temperature

The maximum temperature

The mean relative humidity

The total fall of rain from 13th to 19th December 1885

The mean temperature and humidity are obtained by applying to the mean of the 10a, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;

Calcutta, the 21st December 1885.

ALEXANDER PEDLER,

For Meteorological Reporter to the Govt. of India.

SUPPLEMENT TO THE CALCUTTA GAZETTE, DECEMBER 23, 1885.

Results of the Meteorological Observations taken at the Alipore Observatory from 13th to 19th December 1885.

The mean pressure of the seven days ...
The average pressure of the corresponding period for 24 years, S. G.'s Office

The total number of hours of bright sunshine ...
The maximum possible number of hours of sunshine

The mean temperature of the seven days ...
The average temperature of the corresponding period for 24 years, S. G.'s Office
The extreme variation of temperature
The maximum temperature

The highest velocity of the wind in one hour

The highest pressure of wind on one square foot

The mean relative humidity ...
The average relative humidity of the corresponding period for 24 years, S. G.'s Office

The total fall of rain from 13th to 19th December 1885 ...
The average fall of the corresponding period for 24 years, S. G.'s Office ...
The total fall from 1st January to 19th December 1885 ...
The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h & 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.
o overcast, d drizzling rain, = fog, Δ dew.

ALEXANDER PEDLER.

MEMORANDA.

THE table appended to this memoranda presents the vital statistics of the principal Municipalities in Bengal for the week ending 5th December 1885. The figures in it indicate—

1. That births were registered in these Municipalities at the rate of 25·4 per 1,000 of population as opposed to 27·5 per 1,000 in the preceding week ending 28th November, and deaths at 42·8 per 1,000 against the same proportion, indicating a considerable falling off in the record of births.

2. That the following Municipalities returned the highest proportions of births and deaths :—

<i>Births.</i>			<i>Deaths.</i>		
		Ratio per mille.			Ratio per mille.
Naraingunge	...	40·7	Naraingunge	...	107·6
Bhagulpore	...	41·6	Dacca	...	77·8
Comillah	...	38·5	Puri	...	69·2
Gya	...	36·9	Suburbs of Calcutta	...	63·5
Burdwan	...	33·6	Beauleah	...	60·4
Chittagong	...	32·9	Howrah	...	56·7
Howrah	...	32·1	Gya	...	52·6
			Jessore	...	49·0
			Patna	...	43·0
			Serampore	...	37·3
			Bhagulpore	...	34·4
			Burdwan	...	32·0
			Purneah	...	31·2

3. That the mortality from the several death-causes was as follows in comparison with that in the preceding week :—

				Ratio per mille during the weeks ending—	
				5th December 1885.	28th November 1885.
Cholera	4·9	5·3
Small-pox	·3	...
Fever	19·1	20·8
Bowel-complaints	6·1	7·2
Injury	·3	·1
Other causes	12·1	9·4

The noticeable points indicated by the above figures are that fever and bowel-complaints prevailed with diminished severity, and that the maladies returned under the heads of "Other causes" exhibited enhanced mortality.

4. That while bowel-complaints and injury were nowhere actively severe, and small-pox proved noticeably fatal only in the Patna town, viz at 2·6 per 1,000 of population, the rest of the diseases caused the highest mortality in the following Municipalities :—

<i>Cholera.</i>		<i>Fever.</i>		<i>Other Causes.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Naraingunge	70·4	Beauleah	55·2	Dacca	28·5
Puri	16·7	Jessore	30·6	Puri	23·1
Dacca	16·2	Howrah	27·5	Naraingunge	20·7
Suburbs of Calcutta	11·8	Suburbs of Calcutta	25·0	Gya	19·1
Howrah	5·2	Gya	24·6	Suburbs of Calcutta	16·3
		Purneah	24·3	Patna	15·2
		Dacca	24·0	Howrah	12·8
		Puri	23·1	Midnapore	12·4
		Burdwan	22·9	Bhagulpore	10·9

5. That the mortality according to Sex, Class and Age stands as follows :—

<i>According to Sex.</i>		<i>According to Class.</i>		<i>According to Age.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	45·6	Christians	26·1	Under 1 year	334·4
Females	39·7	Hindus	44·5	1 and under 5 years	50·7
Ratio of male deaths to every 100 female deaths	130	Mahomedans	39·7	5 " " 10 " "	22·6
		Other classes	36·4	10 " " 15 " "	14·5
				15 " " 20 " "	30·8
				20 " " 30 " "	31·8
				30 " " 40 " "	25·7
				40 " " 50 " "	32·4
				50 " " 60 " "	49·7
				60 years and upwards	169·2

R. LIDDERDALE, M.D., Deputy Surgeon-General,

The 21st December 1885.

Sanitary Commissioner for Bengal.

Total ...	709	58	1,440	97	557	1,537	780	70

INCREASE.

Coal ...	Tons.
462	
This increase is due to merchants not laying in stock during rainy season as they used to do before; also to extensive burning for repairs of building damaged by earthquake.	
Edible grain ...	180
This increase is due to high rate consequent on the floods in the Moorsshedabad district on account of the breakage of the Laltiakuri embankment.	
Sundries ...	73
This increase is probably due to high demand consequent on floods.	

NALHATI, the 18th December 1885.

R. G. MOOKERJEE, Manager.

SUPPLEMENT TO THE CALOUTTA GAZETTE, DECEMBER 23, 1885.

RESOLUTION ON THE REPORT ON PUBLIC INSTRUCTION IN BENGAL FOR 1884-85.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 23rd December 1885.

RESOLUTION.

READ—

The Report on Public Instruction in Bengal in 1884-85.

The Report, which is full and instructive, is submitted by Mr. C. H. Tawney, who has officiated as Director of Public Instruction since the 8th March 1885 on which date Mr. A. W. Croft, C.I.E., took furlough to England for thirteen months. Owing to the postponement to April of the University examinations, it does not contain a complete account of the progress of education in colleges and high schools.

mere prolonged absence from head-quarters of an inspecting officer is not, taken by itself, a satisfactory proof of efficiency in the discharge of his duties. The number of schools visited *in situ* is, perhaps, a better test; but there is reason to fear that, in spite of the remarks in last year's Resolution, much of the visiting has been of a perfunctory character.

With regard to the comparative merits of chief gurus and inspecting pundits as a controlling agency, the Lieutenant-Governor sees no reason for reversing his judgment on the opinion of Mr. Croft, which was approved in last year's report. The present Officiating Director is right in supposing that, subject to prescribed rules, the appointment and superintendence of the subordinate inspecting officers will be under the Local Self-Government scheme in the hands of District Boards. The larger powers and consequent higher sense of responsibility of these bodies will, it is hoped, make impossible, in their case, the negligent attitude, with regard to educational progress, which the officers of the Department attribute to District Educational Committees.

7. *University Education.*—The number of Government colleges is 13, and of aided colleges five, as in the preceding year. Another unaided college has been added to the six existing in 1883-84, by the affiliation up to the F. A. standard of the Jagannath College, Dacca. There is a decrease of 265 students in Government colleges and of 47 in Arts colleges generally. It is represented that this decrease is to a great extent nominal, and may be explained by the fact that in many cases the names of those students who left their colleges at the end of December 1884, after completing their two years' course, were not retained on the books. There is an increase of 164 pupils in aided and of 54 in unaided colleges, which still continue to advance. The General Assembly's Institution is said to be regaining its old popularity.

The average cost to Government of each student in Government colleges has risen from Rs. 234 to Rs. 269, the total average cost in 1884-85 being Rs. 366. This increase is due principally to higher rates of salary and to a falling off in the fees received in the last quarter of the year. In aided colleges the average cost to the State of each student has risen from Rs. 27 to Rs. 30, and the total average cost of each student was Rs. 290. It was a recommendation of the Education Commission that some of the Government colleges should, on convenient opportunities, be handed over to local bodies. Action on this recommendation has not yet been taken; but it is now time that the matter should be seriously considered with a view to some appropriate practical action being taken.

University Examinations.—The usual examinations were not held during the year with which the report deals. But in order to relieve unsuccessful students from the hardship of having to take up an entirely new course in the examination of 1885, the University held supplementary examinations in May 1884. The result increased very much the percentage of passed candidates in the F. A. Examination of 1883 and the B. A. Examination of 1884. The percentage of passed candidates in the F. A. Examination was raised to 78 per cent. for Government, to 64 per cent. for aided, and to 63 per cent. for unaided colleges. The percentage for the B. A. Examination now stands at 76 per cent. for Government, 75 per cent. for aided, and 70 per cent. for unaided colleges, and the noticeable fact that the Government colleges were run close in this examination by the aided colleges is another argument, if any were wanted, in favour of the view that the Government of Bengal should begin to retire from the direction of higher education. The satisfactory substitute of successful private enterprise is evidently available to take the place of Government.

Returning to the examinations, it is obvious that the supplementary examinations must have been very lenient, or that the students must have been stimulated to greater exertions by the consciousness that, if they failed in them, it would be useless for them to attempt an entirely novel set of subjects. Possibly both causes may have operated. It is worthy of note that while, in the F. A. Examination of 1883, the Free Church Normal School passed three out of

8. *Secondary Education.*—The following statement shows the number of high English schools for native boys, and of pupils attending them, during the last two years :—

	1883-84.		1884-85.	
	Schools.	Pupils.	Schools.	Pupils.
HIGH ENGLISH SCHOOLS FOR BOYS—				
Maintained by the Department	51	15,399	51	14,801
Ditto Municipal Boards	2	554	2	440
Aided by the Department or by Municipal Boards	118	14,835	123	18,107
Unaided	64	19,245	63	18,050
Total	235	51,037	239	51,798

The number of Government schools is 51, as in the previous year, the Patna City School, which was hitherto treated as part of the Collegiate School, having been recognized as a separate institution, and the Bhoota Boarding School at Darjeeling having been transferred to the class of special schools. Two schools have been returned as maintained by Municipal Boards, namely those at Santipore and Burdwan, while the Feringhi Bazar School at Chittagong has been omitted on the ground that it receives a grant from Government. Aided schools have advanced from 118 to 123, and unaided schools have declined from 64 to 63. There is thus a total gain of four schools. The loss of pupils is accounted for by the fact that, owing to the University and school examinations having been postponed to April, March is now the month of minimum numerical strength. The postponement of the Entrance Examination has rendered it impossible for the Officiating Director to submit the usual comparison of the merits of high schools; but there seems every reason to suppose that the usual rate of progress has been maintained in those institutions. The liberality of Baboo Raj Mohun Roy Chowdury in providing a new building for the Government High School at Taki has been already favourably noticed. The Beerbhoom school, which of late years has shown exceedingly good results at the Entrance Examination, was in November 1884 visited by His Honor the Lieutenant-Governor, who recorded a favourable opinion on its working. The Uttarpara school appears to maintain its high character.

9. The following table gives the comparative statistics of middle English schools for native boys for the last two years—

	1883-84.		1884-85.	
	Schools.	Pupils.	Schools.	Pupils.
MIDDLE ENGLISH SCHOOLS FOR BOYS—				
Maintained by the Department	7	1,077	7	924
Ditto Municipal Boards	1	283	1	280
Aided by the Department or by Municipal Boards	521	34,364	532	37,215
Unaided	124	7,013	155	9,295
Total	653	42,737	695	47,714

The number of Government schools was seven, as in the previous year. These were the Colinga Branch School for Mahomedans, attached to the Calcutta Madrasa, the Model School attached to the Calcutta Normal School, the Rungamati and Bandarban Boarding Schools in the Chittagong Hill Tracts, the Darjeeling Zillah School, the Model School attached to the Patna Normal School, and the Cuttack Model School. The single municipal school is the Model School at Bogra. Aided schools have risen from 521 to 532, and their pupils from 34,364 to 37,215. The Presidency Division has gained seven, Burdwan six, Rajshahye one, and Dacca five, while Patna has lost one, and Bhagulpore seven schools. Unaided schools show an advance from 124 to 155 schools, of which the Presidency Division has gained nine, Burdwan twelve, Rajshahye one, Dacca two, Chittagong two, Bhagulpore six, Orissa four, and the Town of Calcutta one; while Patna has lost five and Chota Nagpore one. Many of these schools have been started in the expectation of obtaining a Government grant-in-aid, and it is hoped that it may be possible to transfer

sent up 1,291 candidates, of whom 623 were successful. Adding to these 26 boys who passed the examination from vernacular schools, we have a total of 649 against 481 in the year before. The Presidency and Burdwan Divisions sent up 627, or 48 per cent of the whole number of candidates at this examination, and passed 58 per cent. of the whole number of successful candidates. The Bhagulpore and Patna Divisions together only contributed 20 successful candidates.

10. The comparative statistics of middle vernacular schools are given below :—

	1883-84.		1884-85.	
	Schools.	Pupils.	Schools.	Pupils.
MIDDLE VERNACULAR SCHOOLS FOR BOYS—				
Maintained by the Department	182	10,313	180	10,474
Ditto Municipal Boards	5	737	9	1,444
Aided by the Department or by Municipal Boards	845	43,061	849	47,873
Unaided	76	4,991	102	6,221
Total	1,108	61,702	1,140	66,011

The decrease of two in departmental schools is accounted for by the fact that two schools in the Burdwan Division, one in Rajshahye, and one in Bhagulpore have been transferred to Municipal Boards, while two new schools have been returned from the Patna Division. Schools maintained by Municipal Boards have risen from five to nine, and there is an increase of four aided schools. While in the preceding year unaided schools declined from 84 to 76, they rose in the year under review from 76 to 102. As in the case of middle English schools, a large proportion of them have been started in the hope of obtaining a Government grant. The financial pressure has made it impossible to meet the wishes of their projectors during the present year. The Officiating Director observes that the grant-in-aid budget may be relieved by ceasing to aid primary schools from it. This will set free a sum which may be more legitimately employed in aiding secondary schools. It is satisfactory to observe that the policy advocated by Mr. Croft, and accepted by Government, of planting Government vernacular schools in advanced rather than backward localities, is beginning to bear fruit. Efforts are being made in many localities to add English classes to them, and it is expected that their position will be so much improved that they will soon recover their original character of model schools. The Middle Vernacular Scholarship Examination was attended by 4,482 candidates from 998 schools. Of these, 2,379 were successful, in addition to 756 candidates passing from middle English schools, or from the vernacular departments of high schools. The total number of successful candidates was 3,115 against 2,031 in the preceding year. The Dacca Division sent up and passed more candidates at this examination than any other division.

11. *Primary Education.*—The following statement illustrates the progress of primary schools for native boys during the year under review—

	1883-84.		1884-85.	
	Schools.	Pupils.	Schools.	Pupils.
<i>Upper Primary Schools.</i>				
<i>Under Public Management—</i>				
Maintained by the Department	20	655	22	753
Ditto Municipal Boards	28	780	6	261
<i>Under Private Management—</i>				
Aided by the Department or by Municipal Boards	2,355	86,987	2,613	96,908
Unaided	61	2,383	79	2,866
Total	2,404	90,805	2,720	100,718
<i>Lower Primary Schools.</i>				
<i>Under Public Management—</i>				
Maintained by the Department	12	297	188
Ditto Municipal boards		51	20	400

There is thus a total gain of 1,864 schools and 57,871 pupils against an increase of 1,165 schools and 69,798 pupils in the preceding year. The rate of progress, while nearly the same as that of 1883-84, differs altogether from the rapid increase observable in preceding years. It was explained in last year's report that, in obedience to the Government Resolution on the Report for 1882-83, the search for indigenous schools beyond the range of effective supervision had been abandoned, and the efforts of departmental officers had been directed towards the consolidation and improvement of existing schools. The figures show that, while schools have increased by 2·9 per cent., their pupils have increased by 4·9 per cent. The obvious conclusion is that existing schools have been better attended. In the case of some districts the figures returned as representing the numbers of primary schools and pupils appear to be of doubtful value. Mention is made of "bogus" and "ephemeral" schools coming into existence at the time of reward examinations and then disappearing, and it is also stated that the same pupils have appeared at more than one centre of examination. In the Chittagong Division especially it would seem that figures returned for former years are untrustworthy, but reports for some other districts also show that the tale of primary schools as returned by the Sub-Inspectors is regarded by the District Magistrates with suspicion.

The total Government expenditure on aided primary schools for boys and girls was Rs. 7,25,430 against Rs. 21,97,067 contributed from local sources, including municipal grants. The Lieutenant-Governor is pleased to observe that the past year's operations have added about 256 schools to the upper primary class, and quite accepts Mr. Croft's view that efforts should be made to increase the number of schools of this grade. The Officiating Director states that the question of substituting mensuration for the first book of Euclid formed the subject of departmental discussion during the year, and gives it as his opinion that the two subjects should be taught together, on the ground that mensuration cannot be effectively taught without some knowledge of Geometry. This recommendation has the approval of the Lieutenant-Governor, and steps should be taken to carry it into effect. The systems of examination of *patshalas in situ* for rewards, and of simultaneous examination of *patshalas* which have been introduced into some districts, appear to have been attended with good results. They should be extended where practicable. The system of payment of rewards to gurus by means of postal money orders has also proved satisfactory in those districts where it has been adopted. The Officiating Director gives it as his opinion that the commission charged by the Postal Department should not be deducted from the amount of reward earned by the gurus, but should be paid out of the district primary allotment. The question of the best method of paying rewards to teachers will be a matter for the District Boards appointed under the Local Self-Government Act to settle in consultation with the departmental authorities. Though approving generally of the system of payment by money orders, the Lieutenant-Governor does not think that it should be enforced at present in all districts. The proposal to discontinue aiding primary schools from the Grant-in-aid Fund is a good one, and should be gradually carried out.

12. *Training Schools*.—The number of these institutions is 16, as it was last year, the abolition of the Chaibassa Training School having been compensated by the establishment of the new training class at the Saidabad Model School in Murshidabad. The Ghatsila training class is now represented by the Haldipukur Training School. The Officiating Director calls attention to a defect in our training-school system, which has been observed by Mr. Metcalfe in Orissa, and also by educational officers in the Dacca Circle. It was brought prominently to the Lieutenant-Governor's notice on his visit to the training school at Balasore. It is complained that the gurus trained in our normal schools, after completing their course, sever all connection with their *patshalas*, and seek some more attractive profession than that of teaching. The suggestion of Dr. Martin that students of

of these Provinces some time ago, and finally abandoned as impracticable. The Lieutenant-Governor is decidedly of opinion that the present is not the occasion for reviving it. The whole subject of normal schools is now under the Lieutenant-Governor's consideration in connection with the recommendations of the Education Commission.

Law Schools.—The number of Government law schools has fallen from seven to six, owing to the abolition of the Presidency College classes. The total number of law students on the 31st of March has decreased from 664 to 649. But these figures are deceptive, as the average roll number has risen from 522 to 765.

Medical Schools.—The number of students reading in medical schools has increased considerably, the number on the rolls of these institutions having been 804 on the 31st of March against 722 in the preceding year, and the monthly roll number 847 against 741. This increase is not restricted to the Calcutta Medical College, which is affiliated to the University. There is also an increase in the Government vernacular medical schools at Sealdah, Patna, Dacca, and Cuttack. A second homœopathic school has been started at Dacca. Sixteen candidates from the Calcutta Medical College passed the first M. B. and L. M. S. Examinations of the University of Calcutta, three candidates passed the second L. M. S. Examination, and eleven qualified for the degree of Bachelor of Medicine. Two native *dhais* and eight pupil-nurses passed in midwifery. Thirty-one students from the Dacca Medical School, 16 from the Temple Medical School, Bankipore, and 11 from the Cuttack Medical School obtained their diplomas in the final examination.

Engineering.—The number of students in the Seebpore College was 149 on the 31st March 1885 against 166 in the previous year, 42 being in the Engineering and 107 in the Apprentice Department. Five students from the Engineering Department passed the first examination in Engineering in August last. Eight students passed the final examination of the Apprentice Department. One sub-overseer's and one overseer's certificate were granted to students on leaving the College. The Superintendent of the Workshops remarks that a great many of the native students find manual labour distasteful, and endeavour to avoid it. With the view of checking this tendency, he has drawn up rules for annual examinations, which, it is hoped, will convert the idlers into earnest workers, or effectually dispose of them.

Survey and Industrial Schools.—There is an apparent decrease in the Dacca Survey School, which is attributed to the opening of the Session having been postponed to the month of June. Great attention has been paid in the school to practical work. The numerical strength of the Patna Survey School is the same as last year, while the number of students in the Cuttack Survey School has fallen from 66 to 55, owing, as is supposed by the head-master, to the difficulty of finding suitable appointments for passed students. It is anticipated that the stoppage of railway operations will interfere, temporarily at any rate, with the prospects of the students of these schools; but there does not seem to be any reason to suppose that the course taught in them is not sufficiently practical. The Principal of the Patna Survey School would admit no students ignorant of English; the Lieutenant-Governor does not think it desirable to introduce this restriction.

The Officiating Director observes that the starting of the Mohisadal Industrial School, under the auspices of the zemindars of Mohisadal, is one of the most interesting and hopeful facts with regard to industrial education. The schools supported by the East Indian Railway Company continue to flourish.

The subject of technical and industrial schools has come under reconsideration since the close of the year.

School of Art.—This institution continues to maintain its high character. The number of students on its rolls has risen from 139 to 157. The Committee of the Exhibition to be held in London next year have sought the

of engraved and chased brass ware, copied from exhibits in the Calcutta International Exhibition and the Art Museum in Chowringhee. Such an industry was not before known in Bengal.

13. *Female Education.*—The following table shows the advance that has been made in female education during the year:—

	1883-84.		1884-85.	
	Schools.	Pupils.	Schools.	Pupils.
GIRLS' SCHOOLS.				
Maintained by the Department	2	200	8	166
Ditto Municipal Boards	4	168	4	160
Aided by the Department or by Municipal Boards	1,703	20,717	2,164	27,692
Unaided	76	2,013	135	2,780
Total	1,785	32,167	2,309	40,797
Girls in boys' schools	33,646	35,749
GRAND TOTAL	1,785	65,813	2,309	76,546

It appears from this table that, taking into account the girls attending boys' schools, and excluding 776 little boys attending girls' schools, the total of girls under instruction has risen from 64,883 to 75,770. The number of girls' schools has risen from 1,785 to 2,309, and of their pupils from 32,167 to 40,797. The number of girls reading in boys' schools has increased from 33,646 to 35,749. The total cost of the 2,039 schools was Rs. 2,68,072, of which Government contributed Rs. 1,63,268; the expenditure from municipal funds was Rs. 6,504, from fees Rs. 20,785, and from all other sources, mainly subscriptions and donations, Rs. 1,37,515. The two Government schools for girls are the Bethune School in Calcutta and the Eden Female School at Dacca. The Bethune School had on its rolls 130 pupils, of whom six were in the College Department, against 117 in the year before, of whom five were in the College Department. The numerical strength of the Eden School at Dacca, which in the year 1883-84 fell from 191 to 157, has now fallen to 62. This decrease is ascribed to the levying of fees throughout the school, and the reduction of expenditure upon gharry hire, owing to the falling off of the subscriptions from which it was paid. It is explained that the fall in the average daily attendance is only from 69 to 52, and that, while the attendance was only 44 of the roll number in 1883-84, in the year under report it was 84 per cent.; and it is surmised that the school will be a gainer by the loss of a number of girls whose attendance was so irregular as to make them a source of injury to their fellow-students. The most notable incident in connection with female education during the year was the donation of a lakh and a half of rupees by the Maharani Surnamayi of Cossimbazar for the foundation of a hostel for female medical students, the first stone of which was laid by the Countess of Dufferin in March last.

Mrs. Wheeler, Inspector of Schools, reports an improvement in the examination results of pupils reading in zenanas, and in schools for infants in Calcutta and its neighbourhood. Out of 3,702 pupils examined by her standards, 380 passed, 1,335 were mere infants, and 1,687 were rejected. The pupils of the Church of Scotland Zenana Mission appear to have been particularly successful at these examinations.

Outside Calcutta, girls' schools are multiplying fast. The increase is shared by all the divisions except Chittagong. The decrease in the Chittagong Division is partly accounted for by the exclusion from the returns of schools in which boys and girls learn the Koran together, an exclusion which appears to require explanation. Remark has been above made on the returns of primary education in the Chittagong Division. The falling off in the district of Tipperah is attributed to the same cause that operated towards the reduction

The advance in the Chota Nagpore Division is shared by all the districts, but is most marked in Singhbhum. This is due to the independent character of the Kol women, and also to the great influence which Major Garbett, the Deputy Commissioner, has with the people of the district, and to the warm interest that he takes in education. It is important to recognise that much has been done for female education by local associations, among which the Uttarpara Hitakari Sabha and the Backergunge Hitaishini Sabha deserve special mention. The former society has recently revised its standards so as to bring them into conformity with those of the department.

14. *European and Eurasian Education.*—The following table gives the number of Government aided and unaided schools, and the number of scholars in them, on the 31st of March last:—

CLASS.	Number of schools on the 31st March		Number of scholars in them on the 31st March	
	1884.	1885.	1884.	1885.
Government	1	1	97	92
Aided	49	53	4,045	5,053
Unaided	13	15	913	1,264
Total ...	63	69	5,055	6,409

The Government expenditure has increased under every head. The expenditure on building grants is at present abnormally high; but when the buildings now in course of erection are completed, it is anticipated that it will not be necessary to make large grants under this head for some time to come.

The year under report completes the period of two years during which the Code was declared to be on probation. A report on the whole period of probation was submitted by Mr Nash in March last, and formed a subject of discussion at the Conference of Inspectors held at Nynce Tal in April and May. The Conference submitted their report on the 11th of May, and the Code was finally sanctioned by the Government of India on the 9th of June 1885. The scale of grants adopted in the Code, as finally approved by Government, is lower both for attendance and instruction than the scale originally proposed. Calculated by the old scale, the total earnings of all the schools on the elementary subjects alone has increased from Rs. 23,920 to Rs. 26,139; the average amount of grant for elementary subjects earned by each scholar who was eligible for instruction grants, has risen from Rs. 10-4-8 to Rs. 11-1-0; and the average amount earned by each scholar on the schedules from Rs 7-14-7 to Rs. 8-6-3. On the whole, it appears that the result of the introduction of the Code system has been a general improvement in the efficiency of European schools. The Lieutenant-Governor is specially gratified to observe that the scholarship examinations have had an admirable effect upon European education, and that the popularity of the examinations does not depend upon the pecuniary reward offered by Government, as is evidenced by the fact that both in 1883 and 1884 there have been more candidates for certificates than for scholarships. These encouraging results are in a great measure due to the zeal and efficiency of Mr. Nash, to whom the thanks of Government have already been given for his services in connection with European education.

15. *Mahomedan Education* — The following statement gives the number and percentage of Mahomedans in different classes of Educational institutions:—

		Total number of pupils.	Number of Mahomedans.	Percentage of Mahomedans.
<i>Public Institutions—</i>				
Arts colleges	...	2,779	129	4.6
High English schools	...	54,011	5,096	9.4
Middle ditto	...	51,459	6,223	12.09
Middle vernacular schools	...	66,988	8,893	13.2
Upper primary do.	...	109,759	17,577	16.01
		7,752,010	980,612	12.65

			Total number of pupils.	Number of Mahomedans.	Percentage of Mahomedans.
<i>Private Institutions—</i>					
Advanced	20,326	9,259	45.5
Elementary	7,013	2,297	32.7
			• ———	————	————
Total	...		27,339	11,556	42.2
			————	————	————
GRAND TOTAL	...		1,470,180	420,768	28.6
			————	————	————

The advance made last year in Mahomedan education appears to have been sustained. The number of Mahomedans in schools and colleges of all kinds has risen from 392,003 to 420,768. The percentage is nearly the same as last year. The total number of Mahomedans in Arts Colleges has fallen from 132 to 129, but the percentage remains the same. There is a slight falling off in high English schools and in middle English schools as regards percentage, though the total number of pupils has slightly increased. Middle vernacular schools show a large number of Mahomedan pupils, though the percentage remains the same. There is a satisfactory increase in upper and lower primary schools. The only division in which the number of Mahomedan pupils has fallen off is Chittagong.

The Officiating Director estimates the surplus of the Mohsin Fund upon figures furnished by the Accountant-General at less than Rs. 4,000. He suggests that the surplus should now be spent in the way proposed by Mr. Croft, viz. in extending the Mohsin contributions for two thirds fees to approved schools under private management. This recommendation will be separately dealt with. The madrassas maintained from the Mohsin endowment are the Houghly, Dacca, and Chittagong Madrassas, and the Oriental Department of the Rajshahye College. The Calcutta Madrassa and the Moorshedabad Nawab's Madrassa are maintained from Provincial revenues. In all the madrassas under Government management, the number of pupils has fallen from 1,191 to 1,057. The decrease is supposed to be only apparent, being due to the change in the date of the University examinations. The number on the rolls of the Calcutta Madrassa and its branch school on the 31st March 1885 was 1,100 as against 1,253 on the same date in 1884. In the Anglo-Persian Department the numbers have fallen from 493 to 406, but the average roll number was 425 against 413 in the preceding year. The Colinga Branch School had 406 students on its rolls on the 31st March 1885, against 485 on the same date in the preceding year. In the Arabic Department, which is not affected by the proceedings of the University, there is an increase from 255 to 336. The total expenditure of the Calcutta Madrassa and the Colinga Branch School has risen from Rs. 39,514 to Rs. 49,540. The expenditure on the College Department was Rs 17,152. At Chittagong a branch madrassa, called the Mir Ahya Madrassa, was established in August 1884. Some of the students in the elementary classes of the Chittagong Madrassa have left to join the new institution. It is believed that the Chittagong Madrassa will gain by being relieved of this elementary work. The central examination of the Madrassas not having been held this year, no account has been given of it in the report under review.

The subject of providing special facilities for the education of Mahomedans has occupied the Lieutenant-Governor's attention in connection with the recommendations of the Education Commission and in connection with the Memorial addressed to the Government of India by the National Mahome-

found in the Chota Nagpore and 9,533 in the Bhagulpore Division. The educational work in the Chota Nagpore Division is principally in the hands of missionaries. There are no separate schools for aborigines, to the exclusion of Hindus and Mahomedans; but in the interior of the districts of Singhbhum and Lohardugga, the schools are attended solely by children belonging to aboriginal tribes. It appears that the lower we descend in the grade of schools, the more numerous are children of this class. The aborigines of the Bhagulpore Division are only 7·8 per cent. of the population, but aboriginal pupils are 9·6 per cent. of the total number. This is ascribed to the fact that the aborigines have no prejudice against female education. A scheme of education for the Sonthals has been introduced into the Damin-i-Koh, and special rules have been laid down to prevent any collision with the missionary schools. Under this scheme 82 new schools with 1,931 Sonthal pupils have been established.

17. *Indigenous Education.*—Under this head are included tols in which Sanskrit is taught, maktabas in which Arabic and Persian are taught, and pathshalas and other schools that do not conform to the departmental standard. The tols have lately been much encouraged by the institution of the Sanskrit Titles Examination, and great efforts are being made in the same direction by the Sarasvat Samaj of Dacca. This is an independent association for improving the study of Sanskrit by holding examinations and conferring titles. It is satisfactory to observe that its finances are declared to be in a flourishing condition. In the Rajshahye Division some of the maktabas appear to merit the title of advanced institutions. In Chota Nagpore institutions of this kind appear to be supported by rich patrons. It is clear that throughout Bengal these schools have still considerable hold on the Mahomedan population. It is much to be regretted that the information furnished with regard to tols and maktabas generally by the Education Department is so very meagre. This is no doubt due in some cases to the unwillingness of the teachers to furnish returns; but it is to be feared that the absence of information with regard to those institutions is mainly to be ascribed to the fact that they are looked upon with disfavour by the subordinate officers of the department.

18. *School-books.*—The Central Text-Book Committee has been enlarged during the year under review, so that it now consists of 15 gentlemen, of whom six are members of the Bengal Educational Service, two belong to other branches of the public service, four are Government pensioners, and three are professional gentlemen unconnected with Government. Down to the 15th September 1885, 653 works were received in the Committee's office from authors and publishers, of which 608 have been already more or less fully reported on. The Lieutenant-Governor has much pleasure in acknowledging the services rendered to educational literature by the President of the Committee, Dr. Rajendra Lala Mitra, c.i.e., Rai Bahadoor, and his colleagues. The Behar Text-Book Committee reports the publication during the year of 44 works, of which 19 were reprints and 25 first publications. Some are printed in the new Kaithi type, but the great majority are in the Devanagiri character. The Orissa Text-Book Committee has been reorganized on a wider basis, the number of its members having been increased from three to eight. It now contains three non-official gentlemen. Six Uriya text-books have been published during the year, of which five have been included in the approved list.

19. The Lieutenant-Governor desires to thank the Officiating Director, Mr. Tawney, for a full and instructive report, and for the energy and ability which have marked his management of this most important department of the public service. The thanks of Government are also due to the Inspectors and to the Professors of Colleges, whose zealous discharge of their onerous duties has so much contributed to the good results of the year.

RESOLUTION ON THE COLONIAL EMIGRATION REPORT FOR THE YEAR 1884-85.

GENERAL DEPARTMENT—COLONIAL EMIGRATION.

Calcutta, the 26th December 1885.

RESOLUTION.

READ—

The Report by the Protector of Emigrants on Emigration from the Port of Calcutta to British and Foreign Colonies during 1884-85.

The report is submitted by Dr. Grant, who held the office of Protector of Emigrants throughout the year.

Act VII of 1871 and the rules framed thereunder continued during the year to regulate emigration to the colonies. Act XXI of 1883, which received the assent of the Governor-General in Council on the 18th December 1883, has not yet come into force pending the final approval of the rules which have been framed for its administration. These draft rules were published for general information in the *Gazette of India* of the 10th January 1885, and have since been under consideration. The Lieutenant-Governor therefore reserves notice of the changes which will be effected by the new law.

2. Emigration agencies for ten colonies were at work during the year, viz., for eight British Colonies—Demerara, Natal, Trinidad, Jamaica, St. Lucia, Grenada, Fiji and Mauritius; for one Dutch Colony—Surinam; and for one French Colony—Guadeloupe. To seven of these colonies their agencies had despatched emigrants during the preceding year, but for Jamaica, St. Lucia, and Grenada no emigrants had been recruited during 1883-84. The requisitions for emigrants and the number despatched in the last two years were as follows:—

COLONIES IMPORTING INDIAN LABOURERS.	1883-84.				1884-85.				REMARKS.
	Number of statute adult labourers.				Number of statute adult labourers.				
	Under requisition.	Despatched.	In excess of requisition.	Short of requisition.	Under requisition.	Despatched.	In excess of requisition.	Short of requisition.	
Demerara	6,910	2,537	3,483	7,000	5,288½	1,711½	Requisitions from Mauritius and Natal specify the number of men only, and leave the number of women to be adjusted by the rule regulating their proportion.
Trinidad	3,205	2,470½	734½	3,030	1,911½	1,118½	
Jamaica	600	530½	60½	
St. Lucia	775	775	825	820	5	
Grenada	104	165	1	
Natal	1,324	475	849	3,495	1,184½	2,310½	
Fiji	2,100	1,401½	698½	1,200	2,074	874	
Mauritius	990	1,138	145	Men 505	1,968½	1,560½	
Surinam	1,800	1,355½	444½	1,350	1,555½	185½	
Guadeloupe	900	885½	14½	450	481½	11½	
Total	17,094	10,260	145	6,979	18,630	13,867½	2,422½	5,194	

The number of emigrants despatched to all the colonies, as usual, fell short of the total requisitions, though it more nearly approximated to the requisitions than has been the case of recent years, as the following statement shows. The figures represent statute adults.

	No. applied for.	No. despatched.
1880-81	13,025	11,394
1881-82	12,314	7,946
1882-83	16,502	8,352
1883-84	17,094	10,260
1884-85	18,630	13,867

Towards the end of the year, on account of a decline in the price of sugar requisitions of some of the colonies were cancelled. Had this not been the case, it appears likely that the supply of emigrants would have been equal to the original demands. The terms offered by the various colonies to emigrants

3 Eight hundred and thirty-one recruiters were licensed for the several agencies during the year, as against 757 recruiters licensed in the preceding year. Thirteen licenses were cancelled for misconduct on the part of the recruiters. Of those, six licenses were withdrawn in connection with cases of abduction of married women from their homes, and three licenses were cancelled in connection with a case of registration of a woman by personation. The percentage of cancellations is not large, but it is larger than that of the preceding year.

4. The total number of emigrants registered for the colonies during the year was 23,191, or, omitting 1,446 re-registrations in the 24-Pergunnahs, 21,745; and distributed according to the provinces where they were registered, the details are these—

Bengal and Behar	12,775
North-West Provinces	6,835
Oudh	1,626
Punjab	283
Central Provinces	39
Madras	51
Bombay	136
Total				21,745

The noticeable feature in this statement is the largely increased number of registrations in Bengal and Behar, which for the first time exceed registrations in the North-West Provinces. Statement I appended to the Report shows that 8,531 emigrants were registered in the Patna Division. As to the causes which favoured increased emigration from Bengal and Behar, Dr. Grant makes the following remarks:—

“The manifestly greater activity of emigration from the Lower Provinces, as compared with that from the North-West and Oudh, is attributable to the comparatively high price of food-grains, the result of persistent drought that prevailed during the year throughout the area from which the largest number of labourers was drawn. For while the crops in Bengal and Behar were suffering more or less from want of rain that led to scarcity, the local markets of the North-Western Provinces and Oudh appear to have been comparatively well stocked. On the other hand, as regards the recruiters themselves, the presence of facilities for obtaining suitable labour so much nearer the port of embarkation than the more distant Upper Provinces, and of economising transit, must necessarily have led them to make the best of their opportunities by concentrating their operations chiefly in Behar and the districts in its vicinity that were most readily accessible by rail. Recruitment for the colonies was carried on most freely in the months of July, August, September, and October; and it was during those months particularly that the poorest labouring classes, who ordinarily emigrate, were feeling the full effects of the high prices of food-grains in Patna, Gya, Shahabad, Monghyr and neighbouring localities. Indeed, early in August, I received a communication from Mr. Grierson, the Officiating Magistrate of Patna, in which he intimated that, “owing to want of rain, the crops in this district have largely failed, and a considerable distress is anticipated among the labouring classes. They are enlisting at present in considerable numbers for the colonies, and I would suggest that you should draw the attention of the various Emigration Agents to the fact that Patna district is likely to prove a fertile field.” Accordingly, I caused the information furnished by Mr. Grierson to be circulated amongst all the Emigration Agents for the colonies and the contractors under the Inland Emigration Act.”

Only one man in 1,765, however, went to the colonies from the districts of the Patna Division, and even in Gya, where recruiters appear to have established their strongest connection, and where the number of emigrants was greatest, the percentage was only 1 in every 567 of the population. Taking the five districts in which colonial recruiters registered most emigrants, viz. Gya, the 24-Pergunnahs, Shahabad, Patna, and Burdwan, Dr. Grant points out that the number of emigrants registered for Assam in these districts was 4,197, as compared with 9,529 persons registered for the colonies. The former number, however, leaves out of account unregistered emigrants to Assam. Labour in a distant colony and the sea voyage thereto are said to have fewer

losses before arrival at the Calcutta depôts was, therefore, 1·08, as compared with 2·32 per cent. lost in the preceding year and 5·99 lost in 1882-83.

6. Of the 22,921* persons admitted into the Calcutta depôts and 1,823 persons remaining in the depôts at the end of the preceding year—total 24,344 persons—264 died, 979 deserted, and 3,730 were rejected or discharged by the recruiting agencies for one cause or another. Of the remainder, 17,548 were despatched to the colonies, of whom 10,546 were men, 4,395 women, (or 41·5 women for every 100 men), and the rest children. (The numerical total differs from the number of statute adults shown in paragraph 2 above). The year was a very unhealthy one in the St. Lucia, Trinidad, and Jamaica depôts. In the two first-named depôts an epidemic of measles, with its after-effects, carried off a large number of persons, especially children, and in the Trinidad depôt many emigrants were received who had suffered privation in the hard times prevailing in their native districts, and who were, therefore, the less able to withstand sickness brought into the depôt by some of their fellow emigrants. The sick were treated with consideration by the agencies.

The average detention of the emigrants in depôt did not exceed a month, except in the Surinam depôt. The emigrants were carried to the colonies in 33 vessels, viz. 28 sailing vessels and five steamers. Papers relating to the voyages of 28 of these vessels had been received by Dr. Grant up to the date of submission of his report. Twenty-one of the 28 voyages were fairly healthy, and seven ships are named as having made unhealthy voyages. Of the latter, the voyage of the *John Davie* to Demerara in September 1884 to February 1885, in which 22 emigrants (out of 459 embarked) died of cholera, and 14 of other diseases, was the most unfortunate, as it was the longest voyage made. The cause of the outbreak of cholera in this voyage is attributed by the medical officer of the ship to contaminated water, but Dr. Grant states that the suspected water had been supplied from the Calcutta hydrants, and that on application of the usual chemical tests before embarkation, it had been pronounced to be free from impurity.

7. The return emigrants who arrived in Calcutta during the year numbered 4,648, or 771 more than in the preceding year. They brought with them savings known to amount to Rs. 9,66,845. The savings brought back by the Trinidad emigrants amounted to Rs. 357 per head, and the smallest average savings brought back from a British Colony amounted (in the case of the St. Vincent emigrants) to Rs. 55·12 per head. From Surinam the return emigrants brought back Rs. 218·9 per head, but from Guadeloupe the 234 return emigrants are said to have brought back between them only Rs. 313 or 12 annas 6 pies per head.

8. The office of Protector of Emigrants was efficiently discharged by Dr. Grant during the year.

By order of the Lieutenant-Governor of Bengal,

A. P. MacDONNELL,

Secretary to the Govt. of Bengal.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
SUNDERMAN DIV.	1 Burdwan, Dec. 26 '85	0.96	Weather—seasonable. Outturn of <i>amun</i> very good. <i>Rubbee</i> promises well. Price of rice 12 to 22 seers per rupee. Public health fair.
	Cutwa	0.65	
	Culina	0.77	
	Raneegunge	1.00	
	2 Bankoora, " 26 "	1.30	Weather—cloudy and rainy at the beginning of week; latterly clear and cold with passing clouds and north-west wind. The moderate showers of rain that fell during the early part of the week have proved very beneficial to standing crops which are thriving everywhere. Reaping of <i>amun</i> paddy fast approaching completion. Health of district generally good.
	3 Beerhoom, " 26 "	0.82	
	Rampur Haut	0.54	Weather—seasonable; showery for two days. Harvesting of <i>amun</i> crop well advanced. Rain has caused some damage to paddy, but has benefited <i>rubbee</i> crops. Price of rice a little lower than before. General health satisfactory.
	4 Midnapore, " 26 "	1.15	
	5 Hooghly, " 26 "	0.83	Weather—wet and cloudy early in the week, since then very cold. Rain has done some injury to <i>rubbee</i> crops. Public health normal.
	Jehanabad	1.08	
PRESIDENCY DIV.	Howrah, " 28 "	0.83	Weather—cloudy during the earlier part of the week; very cold towards the end. <i>Amun</i> is being harvested. Prospects of <i>rubbee</i> crops very good. Public health fair; a few cases of cholera in one or two villages in the Sadder and Serampore sub-divisions.
	Oolooberiah	0.88	
	<i>Central Districts.</i>		Weather—cold after rain. Cold-weather crops and vegetables getting on well. Cultivation of <i>boro</i> paddy going on. Public health good.
	6 24-Pergha, Dec. 28 '85	0.80	
	7 Nudda, " 26 "	0.59	Weather—seasonable. Prospects of <i>amun</i> crop, except on low lands, continue good. Winter crops doing well. Public health on the whole good, though cases of cholera reported from Baraset, Diamond Harbour and Basirhat.
	Koochta	0.37	
	Meherpur	0.55	
	Chooadangah	0.45	
	Ranaghat	1.0	Weather—cool; foggy in the morning. Prospects of winter crops and general health good.
	8 Khoolua, " 26 "	0.41	
	9 Jessore, " 26 "	0.48	Weather—clear. Late rice harvest continues. Winter crops doing well. A few cases of cholera reported.
	Jhenidah	0.39	
	Magoorah	0.35	
	Narail	0.45	
RAJSHAHY DIV.	10 Moorshebadad, " 26 "	0.58	Weather—cold. Harvesting of <i>amun</i> crop still continues. It will yield a good outturn. Price of rice falling. Rain has helped the growth of winter crops which are doing well. Fever has abated. Sporadic cholera reported.
	Lalbagh	Nil	
	Kandi	0.59	
	Jungipore	0.36	
	11 Dinagapore, Dec. 25 '85	0.15	Weather—changeable. Harvesting of <i>amun</i> rice still in progress. <i>Kalai</i> in places has been harvested with a good outturn. Prospects of all other crops good. Public health good. Common rice selling at from 17 to 19½ seers per rupee.
	Rajshahye, " 26 "	0.18	
	Natore	Nil	Weather—fair and cold with foggy mornings. Rice harvest progressing.
	Nowgong	0.18	
	13 Rangpore, " 26 "	Nil	Weather—cold and seasonable. Harvesting of <i>amun</i> paddy and <i>kalai</i> and cutting of sugarcane still in progress. Slight rain has benefited <i>chaitali</i> or spring crops and <i>ganja</i> . Public health fair.
	14 Bogra, " 26 "	0.06	
RAJSHAHY DIV.	15 Pubna, " 26 "	0.24	Weather—seasonable; foggy in the morning. Harvesting of <i>amun</i> in progress. Winter crops doing well.
	Serajgunge	0.20	
	16 Darjeeling, " 26 "	Nil	Temperature seven degrees less than it was this time last year owing to slight rain. A shock of earthquake was felt on 21st instant. State and prospects of crops continue good. Public health on the whole fair, except that there are still a few cases of cholera.
	17 Jalpigoree, " 28 "	0.45	
	18 Dacca, Dec. 26 '85	0.12	Weather—very cool and sometimes cloudy. <i>Amun</i> nearly reaped. Winter crops good. Fever and cholera in Serajgunge abating.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 25TH DECEMBER 1885.

As was stated in the previous weekly report, pressure had fallen rapidly over Northern and Central India on the 17th and 18th of the month, the fall in many instances in North-Western India on the 17th being greater than a tenth of an inch, while at Peshawar on the 18th it equalled a sixth of an inch. This rapid decrease of pressure over Northern India was as usual attended with rain, the rainfall being light in the North-West Provinces, and heavy in the Central Provinces and in parts of the Punjab. At the close of the previous week the rainfall had extended to a few stations in Behar and North Bengal, but on the 19th rainfall became general over the whole of Behar, Chutia Nagpur and North Bengal, while a few showers were reported from Orissa and South-West Bengal. The area of disturbance again extended in a southerly direction on the 20th, and moderate to heavy rain was reported over the whole of Orissa and South-West Bengal, while light rain fell in East Bengal. On this day the rainfall almost ceased in Behar and North Bengal, though rather heavy rain continued to fall in Chutia Nagpur. On the following day the disturbed conditions over Bengal became less pronounced, and the rainfall reported consisted of a few isolated showers, which fell principally in Orissa, East Bengal, and Chutia Nagpur, but from the 22nd rainfall had practically entirely ceased, and for the remainder of the week the whole province was rainless. A fairly steady northerly wind current has continued to blow over the province for the greater part of the week; the northerly winds commenced to strengthen in the middle of the week, and for the last four days the weather conditions have been typical of the north-east monsoon. The skies which were heavily clouded, and in many cases entirely overcast during the first two or three days of the week, cleared rapidly with the disappearance of the disturbed conditions, and at the close of the week almost cloudless skies prevailed over the whole province.

Pressure—Was during the previous week distinctly below the normal, though the defect was a little irregularly distributed. The oscillations of pressure during the present week were for the first three days, during the disturbed conditions above described, decidedly variable and irregular, but with their disappearance, pressure commenced to increase fairly steadily, and the mean pressure for the whole province for the week was only 0.022° below the normal. Again this defect has been rather irregularly distributed, the largest defects being reported from Gya and Cuttack, while in East and North Bengal pressure has been almost normal.

Temperature—As described in the previous weekly report, had been largely above the normal over almost the whole province, but with the occurrence of the general rainfall at the commencement of the present week, and with the subsequent steady northerly wind current, temperature fell very rapidly over the whole province. The rapid fall of temperature was most noticeable in the night or minimum temperatures, and it was most rapid from the 21st to the 23rd of the month. The extreme rapidity of the fall may be judged from the fact that at Julpigoree, from the night of the 22nd to that of the 23rd, temperature fell 12° , at Dinagepur for the same interval, but from the 21st to the 22nd, the fall was 11° , at Bhagulpur it was 10° and at Kungpur it was 8° . For the two nights, from the 21st to the 23rd, the fall of the minimum temperatures averaged nearly 10° over the whole province, while at certain stations, such as Comilla, the fall was nearly 15° . The mean temperature for the week has been slightly below the normal over the greater part of the province, the exceptions being in Orissa with an excess of 1° , South-West Bengal with an excess of 0.8° , and South Behar with an excess of 0.4° , while all other districts show defects varying from 0.5° up to 2° . The defect has been principally in the day or maximum temperature, as will be seen from the following table, where the mean maximum and minimum temperatures for the week at eight selected stations are compared with the normal temperatures for the same period.

For the week ending 25th December 1885.

NAMES OF STATIONS.	MAXIMUM DAY TEMPERATURE.			MINIMUM NIGHT TEMPERATURE.		
	Normal averages for week.	Actual averages for week.	Difference.	Normal averages for week.	Actual averages for week.	Difference.
Cuttack	82.0	79.0	—3.0	56.8	61.7	+4.9
Calcutta (Alipore)	74.8	74.0	—0.8	53.2	57.6	+4.4
Burdwan	76.6	75.2	—1.3	53.1	57.5	+4.4
Jessore	77.2	73.3	—3.9	52.1	56.0	+3.9
Dacca	77.4	74.2	—3.2	55.1	57.5	+2.4
Patna (Bankipore)	72.9	66.8	—6.1	48.1	52.4	+4.3
Purneah	75.6	65.8	—9.8	47.5	?	?
Hazaribagh	71.3	65.3	—6.0	48.6	50.7	+2.1

this district being 1.62 inches. Orissa has received an average fall of 1.43 inches. South-West Bengal reports a fall of 0.72 inch, South Behar a fall of 0.70 inch, and North Behar a fall of 0.55 inch. The falls in East and North Bengal have been considerably smaller, and while East Bengal reports an average fall of 0.24 inch, North Bengal has only received a fall of 0.17 inch. As the normal fall over the province at this period is not more than one or two hundredths of an inch, it will be seen that the actual fall in all instances is many times larger than the normal,

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 25th of December 1885 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.							
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.

The mean pressure of the seven days	Inches.	30.035
The average pressure of the corresponding period for 24 years, S. G.'s Office	30.039
The total number of hours of bright sunshine	Hours.	53.7
The maximum possible number of hours of sunshine	74.9
			°	
The mean temperature of the seven days	62.7
The average temperature of the corresponding period for 24 years, S. G.'s Office	67.4
The extreme variation of temperature	23.0
The maximum temperature	74.6
			Miles.	
The highest velocity of the wind in one hour	15
			lb.	
The highest pressure of wind on one square foot	Not measurable
			%	
The mean relative humidity	80
The average relative humidity of the corresponding period for 24 years, S. G.'s Office	71

The total fall of rain from 20th to 26th December 1885 ... 0.86
The average fall of the corresponding period for 24 years, S. G.'s Office.. Nil
The total fall from 1st January to 26th December 1885 ... 66.72
The average fall of the corresponding period for 24 years, S. G.'s Office .. 65.23.
The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.
The maximum and minimum temperatures are obtained from self-registering thermometers. All the
rmometers are verified, and the readings have been corrected to a standard constructed and verified at the
w Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet
ve the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86
merly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the
eteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.
The mouth of the rain-gauge is one foot above the ground.

MEMORANDUM.

THE table appended to this memorandum presents the vital statistics of the principal Municipalities in Bengal for the week ending 12th December 1885. The figures in it indicate—

1. That the birth-rate in these Municipalities amounted to 25·6 per 1,000 of population against very nearly the same ratio, viz 25·4 per 1,000 during the preceding week ending 5th December, and the death-rate to 39·4 against 42·8 per 1,000, showing a large decrease in the registration of deaths.

2. That the undermentioned Municipalities furnished the highest proportions of births and deaths :—

<i>Births.</i>			<i>Deaths.</i>		
		Ratio per mille.			Ratio per mille.
Naraingunge	...	62·1	Naraingunge	...	86·9
Jessore	...	42·8	Suburbs of Calcutta	...	60·8
Bali	...	38·6	Purneah	...	58·9
Utterpara	...	37·8	Dacca	...	58·5
Chittagong	...	32·8	Gya	...	58·1
Gya	...	32·8	Jessore	...	55·1
Durbhanga	...	32·3	Serampore	...	53·0
Burdwan	...	32·0	Puri	...	42·0
Bhagulpore	...	31·7	Howrah	...	40·7
Howrah	...	30·9	Burdwan	...	38·1
			Hughli	...	36·2
			Patna	...	34·1

3. That while no death was recorded under the head of small-pox in any Municipality, the mortality from cholera and injury amounted on the whole to 4·9 and ·3 per 1,000 of population, respectively, against the same proportions in the preceding week; from fever 17·6 against 19·1 per 1,000; from bowel-complaints 6·9 against 6·1 per 1,000; and from all "other causes" 9·7 against 12·1 per 1,000.

4. That excluding small-pox, from which, as before stated, no death was reported, and the mortality from violence which was nowhere noticeably high, the rest of the diseases above specified caused the greatest loss of life in the following Municipalities :—

<i>Cholera.</i>		<i>Fever.</i>		<i>Bowel-complaints.</i>		<i>Other Causes.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Naraingunge	... 53·8	Purneah	... 52·0	Serampore	... 13·7	Puri	... 21·0
Jessore	... 24·4	Jessore	... 30·6	Suburbs of Cal-	...	Dacca	... 20·7
Suburbs of Cal-	...	Gya	... 27·2	cutta	... 13·2	Gya	... 18·4
cutta	... 13·2	Suburbs of Cal-	...			Serampore	... 17·7
Howrah	... 10·3	cutta	... 23·4			Midnapore	... 12·4
Dacca	... 9·1	Dacca	... 23·4			Patna	... 12·3
		Burdwan	... 22·9			Suburbs of Cal-	...
		Serampore	... 21·6			cutta	... 11·0

5. That the mortality referable to *Sex*, *Class* and *Age* stands as follows :—

<i>According to Sex.</i>		<i>According to Class.</i>		<i>According to Age.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	... 40·2	Christians	... 30·4	Under 1 year	... 277·8
Females	... 38·6	Hindus	... 42·2	1 and under 5 years	... 55·0
Ratio of male deaths to every 100 female deaths	... 118	Mahomedans	... 33·7	5 " " 10 " "	... 19·4
				10 " " 15 " "	... 16·7
				15 " " 20 " "	... 27·7
				20 " " 30 " "	... 25·1
				30 " " 40 " "	... 30·1
				40 " " 50 " "	... 31·8
				50 " " 60 " "	... 42·6
				60 years and upwards	... 96·2

R. LIDDERDALE, M.D., Deputy Surgeon-General,

The 28th December 1885.

Sanitary Commissioner for Bengal.
